Soviet-bound Vax was 'war material'

by George Black
US DEFENCE department officials have claimed that the microcomputer intended en route to the USSR would have speeded development of "smart" missiles. They described the DEC Vax-11/782, seized at Hamburg on its way to Sweden, as a highly integrated package for the design and manufacture of integrated circuits for these missiles.

The US expects to make such technology operational by 1990, but Russia is still 10 to 15 years behind, according to the officials. Defence secretary Caspar Weinberger put the catch on slow at a Washington press conference. He said it would have helped the Russians make "vastly more accurate and destructive weapons" and cited real-time calculation of missile paths as one potential application. Graphics and CAD/CAM

enhancements made by Tektronix, System Industries and others were also recovered. The other half of the consignment, lured in Helsingborg, is now in the hands of the Swedish army. Trade minister Mats Hellstrom refused an export licence after it was classified as "war material". It is unclear if the Swedes will grant a US request for the return of the goods. US treasury officials have named West German Richard Mueller as instigator of the plot. He was said to control a South African firm claiming to be involved in electronics research, which had sent the Vax to West Germany. Mueller, who owned a firm called Semitronics at Jenseberg-Weidenhof in West Germany and another at Zug in Switzerland, had been indicted in the US for allegedly committing trade offences.

The case is recorded in the US federal register.

NIXON... Knighted in New Year Honours list.

IBM chief is knighted

by George Black
CHIEF executive of IBM UK Eddie Nixon was knighted in the New Year Honours List - thus revealing to the inquisitive his full name of Edwin Ronald Nixon. Information Technology Minister Kenneth Baker was recognised by being made a Privy Counsellor. Jim Hodgson, vice-chairman of British Telecom, is rewarded with a CBE for his performance as managing director of British Telecom International, the money-spinning division that has been the centre of the union revolt over privatisation. Alan Shepherd, managing director of Ferranti Electronics, and

Ronald Newham, engineering director in charge of electronics and defence at Thorn EMI, also receive CBEs, as does Tony Davies, chief executive of Information Technology, in recognition of his shake-up of the Computer Technology (CTL) Group. Among the MBEs was John Fisher, STC's electronics manager at Newport. An OBE went to John Midwinter, British Telecom's leading expert in fibre-optics and head of its research division. The assistant secretary at the technical regulations department of the Institution of Electrical Engineers, David Brice, got an MBE.

ICL set to launch new personal

ICL IS to launch its 8088-based 16-bit multi-user and multi-tasking personal computer within next two weeks. It will be colour, will offer Concave CP/M-86 and will support up to four users. It will be compatible with the Rair eight-bit micro, word processing specific Wordplex is moving into the personal computer market, and PC is set for a January 26 launch.

France deal

MATRA, the French defence electronics company, and Datapoint have reached a collaboration agreement covering production of electronics equipment for the French market. If approved, the French government, production will start this year and plans expand into the rest of Europe under discussion.

Gow goes solo

JOHN Gow has resigned as chairman of Systime, the company he helped set up in 1972. Systime has followed ICL's lead and poached a senior executive from Texas Instruments, Ron Atwood, to serve as its managing director. Atwood was Robb Willett's successor as managing director of Texas.

Support for Adam

HONEYWELL is to support the troubled Adam microcomputer in the US through the mainframe company's service centres. Thirty-five centres are planned for this year. No UK plans have been announced for the machines, which are due to launch here in February.

Tesco sacks 48 - at three hours' notice

by John Kavanagh
NEARLY 50 computing staff were sacked by Tesco Stores last week - including two top men in the company's microcomputer retail business.

All the staff were given just three hours' notice. The company said the sackings were part of a restructuring of the 500-strong computing division - a restructuring which has seen changes at board level. The 48 jobs were split between the main computer centres in Chesham and Welwyn Garden City in Hertfordshire. Programmers, analysts, operators and administration people were involved. In addition, a top manager and a senior support man in the microcomputer centre were

sacked. The centre, part of the computing division, is in Welwyn, where it sells mainly IBM, Apple and Olivetti machines. "Because of the nature of the work, involving secret commercial information, the redundancies took effect immediately," Tesco said. The sackings follow a reshuffle of top directors. Just before

Christmas Donald Harris, the director in charge of data processing, was moved to strategic planning. Finance director Ralph Temple was made joint managing director and took on responsibility for computing. The computing division was the only part of Tesco to be hit by redundancies. The company said it would be taking on staff elsewhere

in five superstores. It has 49,000 UK staff. Tesco is one of IBM's biggest customers, having moved from ICL equipment in the late 1970s. It runs big 3081 and 3033 mainframes in Welwyn and a 3083 and a 4300 in Chesham. The company said none of the IBM processors would be returned as part of the restructuring.

Sinclair micro will challenge Acorn

SINCLAIR is launching a new micro today (Thursday) to challenge Acorn's BBC Model B. Although the firm will not reveal details of the machine until today, reports indicate it will have 128K memory, a full-size keyboard and twin Microdrives. It will be known as QL, and should sell for under £400.

Hitachi first

Hitachi claims to have won the race to design the world's first one-chip random access memory device. The company says that it will introduce a one-chip DRAM at the International Solid State Circuits conference in San Francisco, next month. But it will not be showing samples.

Micro maker hit

HARRISON Industrial Developments, which includes H. H. Microcomputers, has gone out of business. The group's bankers have called in a receiver. Roberts, the receiver said that there had already been approaches made to the company though he would not confirm that Torch was interested.

Berisford stops

BERISFORD Information Technology, formed a year ago out of the DP department of S & W Berisford, one of the world's largest commodity brokers, has stopped trading. In a curt statement, the mother company said that after reviewing BIT's progress it had decided to withdraw from "external markets" of the Berisford subsidiaries; no word yet about what happens to BIT's clients or suppliers - which include ICL - but there is speculation that BIT staff intend to continue the business on their own.

Engineering prospects look good

■ From page 1
the companies use graphics, but only 7% have computerised their use. Of the vendors represented in the engineering marketplace, IBM dominates the installed base of large systems with 63% of the machines valued at over £500,000. ICL has 23% of the installed base in large systems.

ICL and IBM are almost neck and neck when it comes to the medium sized systems installed base. ICL has 23% of systems costing between £50,000 and £500,000 and IBM 22%. Honeywell, Hew-

lett-Packard and Digital Equipment follow with 13%, 10% and 9% respectively of the medium-sized system base. That there is scope for other vendors is shown by the 23% share they hold. When it comes to small multi-user systems, worth up to £50,000, Digital Equipment takes the lead with 17% and IBM has 12%. Burroughs, ICL and Data General follow with respectively 7%, 7% and 6%. Other vendors account for a very significant 46%, which suggests a lot of room for manufacturers and OEMs specialising in this market place.

Microcomputers are being introduced into engineering at a fast rate, suggests the survey, and are most extensively used for technical and scientific applications, budgeting and forecasting, and graphics and design, as well as text processing.

The most popular single user micro vendor in the £500-£5,000 price range is Commodore Business Machines with 33% of the installed base, followed by Apple (27%), Tandy (7%), ACT (5%) and Hewlett-Packard (5%). The survey finds that there is a "significant shift" away from traditional

Deals give foot-holds to Logica

by George Black
UK SYSTEMS house Logica has begun the new year with two deals in gain a foot-hold in micro-mainframe links and high security services. The first involves the purchase of a Californian company, Intelligent Technologies International Corporation (ITIC), of Palo Alto, which already has a micro-mainframe connection called PC-Express. Logica is to pay £1.25 million (about £274,000) for ITIC and will repay \$1.9 million (£1.3 million) loans, used to set up the company, by August 1986. ITIC was established a year ago by Victor Amexina, formerly of Hewlett-Packard, and Dan Gregerson, of Zilog. The other new move by Logica is to form a closer tie with the US data processing manufacturer, Tandem. Logica and Tandem have been associated with one another for several years and Logica won the contract to computerise the Hong Kong stock exchange last year on the basis of Tandem hardware. But how the relationship is to be formalised, with Logica expected to use Tandem machines for its big

HERMON... "More cement."

The mystery of the vanishing firm

by John Riley
PORTICO, the portable microcomputer manufacturer, is in financial difficulties, and left its rented premises on the South Bank three weeks before Christmas without leaving a forwarding address. Portico was set up at the end of last March by Geoffrey Smith and Mary Tatten, former consultants to ITCS of Staines, and David Holstead, a former ITCS microcomputer dealer. They commissioned and designed a portable microcomputer, called the Miracle, produced the first prototype within a month, and launched it on July 1 last year. "There are financial difficulties," confirmed Portico's non-executive chairman, Graham Thom, of Shaw and Co, stockbrokers, "but we are hoping to resolve them, and are still in business." He expects a new machine in January. However, there was no satisfactory explanation from him of Portico's failure to leave a forwarding address. The receptionist at the South Bank offices said there had been many calls for Portico since it had left the premises. Shaw and Co. helped raise the

cash to get Portico started. Last August Holstead resigned as joint managing director. Around that time Smith claimed that he was "three deep in enquiries for the Miracle", and that he expected to produce 200 machines a month by September. Details of the company's troubles were not forthcoming from Thom, and neither Smith nor Tatten could be contacted for comment. The managing director of ITCS, David Lewis-Pryce, recently claimed that Portico used the original designs for his Zita portable microcomputer for the Miracle. That suggestion was vigorously denied at the time by Tatten who said: "Smith and I are not technical people, so we wouldn't have had the know-how to take the designs." Lewis-Pryce's company Information and Technology Computer Systems (which is separate from ITCS) manufactured the Zita microcomputer but is currently in liquidation. The Zita portable micro is being manufactured by subcontractors for Zita Microsystems, which operates from the same address in Staines as ITCS.

WILLOTT... Unhappy time at BTG.

Ex-BTG chief moves in DoTI shuffle

by George Black
ALISTAIR McDONALD, head of the information technology division at the Trade and Industry Department, is being shifted to the telecommunications division. His current job will be filled by former chief executive of the British Technology Group, Brian Willett. The shuffle is being interpreted as a sign of the increasing importance the government places on telecommunications as the date for the sale of British Telecom approaches. But McDonald's move from the IT division will be met with regret. He has been widely credited with pushing forward DoTI's in-

formation technology programmes over the past two years, and his will be a hard act to follow. Willett's time at the BTG has not been a happy period for the organisation. He joined its predecessor, the National Enterprise Board, in April 1980, and became BTG chief executive in July 1981. Last year the government cut its role as a backer of companies after reviewing its record unfavourably. While its defenders argued that it was set the impossible target of a 13% return on ventures that commercial companies shied away from, it turned in several huge losses, notably on the office automation project Nexos.

Tory peers put Telecomms Bill in peril

by George Black
THE government faces a revolt backed by Tory peers as the Telecommunications Bill enters its second reading in the House of Lords next Monday. Peers of all parties will bombard it with amendments which could embarrass the Cabinet and even force it back to the Commons. Critics are now backing a move to give more teeth to OfTel, the proposed supervisory body. A Tory group led by Lord Orr-Ewing, chairman of Air Call's Cellular Radio consortium, aims to bring in an amendment to strengthen competition. Lord Orr-Ewing said: "We want to give a fair chance to the

small firms who have pioneered these services over the last 25 years. It's very difficult to believe that OfTel's 40 staff can cope with regulating BT's £250,000." At the same time, the Labour side is pressing for a separate watchdog on consumer interests to be called the Telecommunications Council. Under proposed legislation the Post Office Users' National Council would pass its telecommunications role to OfTel. Some peers also fear that BT will buy far more supplies from abroad, thus endangering big contractors like GEC and Plessey. It wants to prevent BT from discriminating against certain services and geographical areas on

ORR-EWING... "Fair chance."

grounds of unprofitability. And POEU attention has shifted to the coming struggle in the Lords.

Televideo drops three

TERMINAL and micro manufacturer Televideo is to drop its three UK microcomputer distributors Middleton, Encotel and Colt Computers. Thorn-EMI will be made the exclusive UK distributor for the micro products in a deal announced today. All three present distributors hope to become OEMs and retain their dealers. Encotel marketing manager Keith Blackerton said there had never been any suggestion that Televideo was dissatisfied with Encotel's performance. "We've always met our commitment and always got distributor discount. But Thorn-EMI is a big company

and it would be rash to suggest that we are as powerful as them in the market." But David Sergeant, distribution manager of Middleton took a different view: "I assume Televideo are not happy with market penetration in the UK. It came as an incredible shock when they wrote and told us before Christmas that Thorn-EMI was taking over."

BUTCHER... "Foolish" predictions warning.

Butcher warns against IT joy

by Dave Madden

TWO senior industry figures provided dramatically different views of information technology's effect on prospects for the UK economy, last week.

John Butcher, Parliamentary Under-Secretary of State for Industry, warned against the "foolish" predictions of an age of leisure. Philip Hughes, founder and chairman of Logica, predicted fundamental changes in attitudes to work and leisure in the wake of adopting high technology.

Butcher was speaking at a local meeting in his Coventry South West constituency, where he recently made disparaging comments about the "lazy" North of England, and not as a Department of Trade and Industry spokesman.

He told Coventry's Conservative Political Centre that any suggestion that information technology was a panacea for industry, ushering in "an age of leisure" was "foolish and misguided", distracting us from what should be our

real preoccupation in 1984 - "the need to subordinate all our interests to the needs of wealth creation in the UK".

For from expecting information technology to change traditional working patterns, Butcher said that 1984 "will be a year of the growing use of overtime" which "is the prerequisite for the generation of profits from which overdue capital investment can take place."

It is that investment which Butcher expects to "make a hole in the unemployment figures", without any need to tamper with work patterns.

He went on to say that in the medium and long term, the application of technology does not mean the "dawning of a new age of leisure. Their application will simply make us more efficient in the generation of surplus wealth which will re-enter the economic system, and create new jobs - the 40 hour week will remain the basis of work patterns throughout the 80s, and the sooner we recognise this the

sooner we shall see more, not fewer people in work".

Although Hughes agrees that the UK economy can be stimulated, and that the information technology industry will be the catalyst, he anticipates that this will bring radical changes.

Hughes was speaking on the television programme *Beyond 1984*, part of the Orwellian-organ with which the BBC greeted the New Year. He told *Computer Weekly*: "We were projecting about 25 years ahead, and the basic premise was that we will be able to create wealth in the UK but only if we move fast to encourage what I call the knowledge-based industries."

But, he added, that alone will not create jobs. "Unemployment is not just a temporary phase, and I can't see us getting back to the relative full employment of even six or seven years ago without drastic changes - there is going to be a radically different mix of employment and unemployment."

Lords will debate Alvey

by our parliamentary Correspondent

PARLIAMENT returns Monday, and among the first business in the Lords will be the recommendations of the Alvey Committee report *IT Technology*.

The Earl of Desborough, announced before the session will start Alvey debates.

The Lords will also be the Third Reading of the *Communications Bill*, which passed by the Commons last session.

The Cable and Broadcasting Bill was debated before Christmas Lady Trumpington for the present saying she hoped that proposed new cable rules would start work as soon as they were enacted.

The authority would be chairman and six members, appointed by the Home Secretary while the Bill was still being debated.

Of significance to the computer industry would be interaction

BRITAN... Go-ahead.

Access to the television set, and these would be encouraged by the new authority, said Lady Trumpington.

Lord Mishcon, for Labour, did not oppose the Second Reading of the Cable Bill, but said his party would press for extra safeguards during the committee stage, which will begin in the second week of the coming session.

The go-ahead was given in the Commons on the final day of the last session for 11 existing cable operators to extend their present services to provide new programmes, by Home Secretary Leon Brittan.

Rivals make up to boost exports

by John Kavanagh

NEW export initiatives have been set in motion by the UK information technology industry following a meeting of the major trade associations.

At the same time the export effort has been boosted by a declaration of peace by the Computing Services Association and the government's ExportIT organisation. This follows the resignation of ExportIT chairman Donald Moore, who claimed the CSA was misleading in its try to become the only export co-ordinator.

CSA Alison Newell last month called a meeting of seven trade bodies, including the Business Equipment Trade Association and the Telecommunications Engineering and Manufacturing Association. Other meetings will be held this year.

"There was a lot of goodwill and a great feeling that we could work together a lot more," Newell said.

"I pointed out that software is one of Britain's strengths and should be used in overseas sales opportunities by allying it with products and systems from members of the other IT trade associations."

Members of different associations already co-operate. The meeting linked at ways the associations themselves could co-operate.

Newell said more companies could pool information on faraway countries such as Japan. And associations could get together to send members on overseas missions backed by the British Overseas Trade Board.

Such missions needed 10 companies to qualify for backing; an individual association was often unable to get enough members together but several associations could meet the minimum between them.

Newell said the CSA and the National Computing Centre, both

original backers of ExportIT, felt the organisation was valuable to smaller firms.

She was "saddened" by Moore's comments: "All of us are working to win more exports for the UK," she said.

Moore resigned partly because of "bureaucratic meandering" by the government. ExportIT was formed at the end of 1981 with £248,000 from the government to see it through 1982.

ExportIT directors believe a single payment of around £200,000 would be enough to make the organisation self-financing.

Donald Cook, a consultant to ExportIT, was elected chairman at the annual meeting at the end of December. "Now that the CSA has met the other trade associations and reported back to the government I am hopeful that we are fairly near in an arrangement which is acceptable all round," he said.

NEWELL... "More companies could pool information."

Apple has agreed to grant Franklin a breathing space in which to develop its own operating system to allow it to continue selling the Ace. Franklin's director of communications, Susan Gault, said the new system was already in its test phase and should be ready by the spring.

The two firms have also agreed to settle any further disputes out of court.

The case was a milestone in US legal history.

Apple settles for \$2.5 million

by George Black

APPLE has agreed to accept \$2.5 million from Franklin Computer of New Jersey for infringement of its copyright following an Appeal Court decision in Apple's favour last September.

The court ruled that the Apple DOS operating system, Applesoft and Autostart-ROM were protected by copyright, even though the programs were on a chip, and that Franklin's Ace 100 machine infringed that right.

Last week the two firms reached an out-of-court agreement on the damages.

Apple has agreed to grant Franklin a breathing space in which to develop its own operating system to allow it to continue selling the Ace. Franklin's director of communications, Susan Gault, said the new system was already in its test phase and should be ready by the spring.

The two firms have also agreed to settle any further disputes out of court.

The case was a milestone in US legal history.

Report blames staff shortage on training

by George Black

LACK of training is one of the causes of the worsening shortage of computer staff. A report published by an independent research organisation cites as an example a complaint from the banking union BIFF, which criticises the lack of investment by employers in staff training and the use of contract staff as a short-term solution to the recruitment problem.

BIFF alleges that contract staff are brought in to fill jobs that permanent staff could do and to work on new projects, thus denying its members training opportunities.

The report was prepared by Income Data Services, a London recruitment researching pay and industrial relations. It looked into 38 bodies, 10 in the public sector, 12 in banking, insurance and finance and 16 in manufacturing and retailing.

While income data processing manager told IDS that current

shortages were due to the unwillingness of employers to train, the drug company Glaxo claimed it had had no recruitment difficulties because it recruited and trained internally for all computer posts and rarely found it necessary to look for staff outside the company.

But about half of the employers surveyed, including Thomas Cook, Trustee Savings Bank and Brighton Council admitted recruitment difficulties. Many replied that the phenomenon was nationwide.

Staff turnover showed very high rates compared to other industries: 9.8% among operators, and even 11.5% among programmers.

Glaxo said its programmer turnover was 11.5%.

Shortages pushed up wages by 10 to 13% in the year to April 1983.

Income Data Services Ltd, 140 Great Portland St, London, W1. Tel: 01-580 0521/9. Study 304 December 1983.

Teachers hit at micro policy

by John Kavanagh

GOVERNMENT policy of putting a microcomputer in every school came under fire from all sides of the teaching profession last week.

Teachers pointed to the failure to back up the installation of equipment with suitable teacher training. One specialist said government policy was naive and another said universities were having to give remedial coaching to undergraduates with A-levels in computer science.

Meanwhile the National Union of Teachers has started a series of 12 courses aimed at making up government and local authority shortfalls in training school teachers in computing.

The scene was set by Jon Stewart, a senior lecturer in primary education and a researcher in the national ITMA project - Investigations in Teaching with

Microcomputers as an Aid. She told the Association for Science Education that schools should be aware of programs which simulated simple instruments such as thermometers when the actual instruments were readily and cheaply available.

"With a shortage of money they do not have a strong place in the primary school," she said. "At their worst they become games which children just want to win."

Stewart's views were backed by ITMA director Dr John Coupland.

"The lack of computing skills among teachers is absolutely terrifying," he said. "We've all had the naive idea - typified by the government's naive attitude - that all the schools needed was equipment."

Teachers are at the juvenile stage as far as computing is concerned. They choose programs in

the same way a child might choose a paperback because of its cover. What they should be doing is evaluating their attitude to teaching and then choosing the right programs to back it up.

Coupland said the real costs of introducing computers to schools lay not with the equipment but with training teachers.

Richard Ennals, a research fellow in computer science at London University's Imperial College, agreed. He told the North of England Education Conference that the teaching of computer science in schools had to be improved in quality and quantity.

"Some teachers are doing superb programming work in their spare time - but what we should be doing is identifying and developing the kind of thinking needed in the classroom," he said.

Leader Comment - page 13

Cabinet authors neglect publishing

by George Black

A CABINET Office report *Making a Business of Information* has been criticised for concentrating on the online sector - things like videodiscs - at the expense of publishing and broadcasting.

Roger Tomlinson, responding on behalf of Unilever Computer Services (UCS), welcomes the report's main conclusions, but says the authors "fell into their own trap" by concentrating on the technology-intensive sector of the information business.

"It's quite likely that that will have been seized on by many respondents and used to discredit the entire report, which would be unfortunate," he commented.

He calls on the government to accept the chief recommendation and do for tradeable information in 1984 what it did for information technology in 1982. A government statement on the report is expected within the next few weeks.

The report was published last year by the Information Technology Advisory Panel, whose earlier

findings on cable quickly found favour with the government.

UCS supports the team's call for a single government department to be responsible for all tradeable information and says: "We hope this department will genuinely attempt to make a business of information and not simply be another focus for IT."

The fledgling online information industry, says UCS, employs less than 1% of the panel's estimated one million personnel involved with selling information.

BRITAN... Go-ahead.

Access to the television set, and these would be encouraged by the new authority, said Lady Trumpington.

Lord Mishcon, for Labour, did not oppose the Second Reading of the Cable Bill, but said his party would press for extra safeguards during the committee stage, which will begin in the second week of the coming session.

The go-ahead was given in the Commons on the final day of the last session for 11 existing cable operators to extend their present services to provide new programmes, by Home Secretary Leon Brittan.

McGORMACK... Joint promoter of winning game.

\$100,000 prize offered for home video game

by Philip Hunter

A PRIZE of \$100,000 is an offer for the winner of a new international competition to design an innovative video game for a home computer.

The competition closes on May 15, and prizes will be presented at a television show in the autumn.

The winning game will be marketed by joint promoters Mark McCormack, whose International Management Group is best known for marketing the public affairs of celebrities such as Michael Parkinson and tennis champion Martina Navratilova.

The prize money is an advance on royalties, and the winner will take 10% of all sales after the \$100,000 has been paid.

"Whoever wins the competition is likely to move into the millionaire class," says Mark Elliot, managing director of Video Games

International, sponsor of the competition.

Joint promoters of the competition are McCormack, and the International Register of Independent Computer Programmers. McCormack will keep full marketing rights for winning games.

There will be five consolation prizes of \$15,000 for games that win individual categories, and these games will be marketed as well, with the promise of extra royalties for the winners.

Elliot said he would like to see a game that makes use of film editing facilities such as close-ups and screen sound effects winning the competition.

The winning game should also combine manual dexterity and mental skills, Elliot suggested.

The competition is being promoted in 20 countries, and will be an annual event.

Four-fold floppy fillip

by Philip Hunter

THE 1983 microcomputer boom brought a surge in demand for two-sided 5¼in floppy disc drives. Worldwide sales were up almost fourfold to 5.5 million units, while total sales of flexible disc drives doubled to 11 million in 1983, according to a US report.

But sales of 8in floppy drives were static in 1983, and are expected to decline steadily over the next three years, as the storage capacity of the 5¼in models continues to increase.

At the same time a dramatic increase in sales of the microfloppy

3½in drives, such as the Sony models adopted in 1983 for new micros by Hewlett-Packard and Applied Computer Techniques is expected. About 300,000 microfloppy drives were sold in 1983, but the number is expected to reach three million in 1986, according to the report.

The UK market is showing trends similar to the US, according to Mike Perry, director of the UK Peripheral Suppliers Association, with the smaller drives rapidly taking over from larger ones.

*1983 DiskTrend, 1224 Arbor Court, Mountain View, CA 94040 US.

We sell what you thought you could never buy

Your executive time is a highly-priced commodity. But are you making the best use of it?

Our new TRIFID Software System is designed to help you do just that. Developed by ourselves for the better management of our own operations, it provides the optimum route for effective business planning and control. We believe it to be the most comprehensive, most flexible real-time package ever.

Designed by users for users, it contains more displays, more management control information and more user-friendly features than any

other similarly-based applications package.

To be technical, TRIFID is aimed at the latest generation of mini, supermini and small mainframe computers running on the simple, but highly advanced, PICK operating system. That includes the IBM Series 1 and IBM 43XX range, of course.

To be practical, that means that for the first time ever, you really can buy yourselves more time to manage the business.

Motorola steams into the office

by Nuala Moran
MOTOROLA's plans to become a force in office automation are finally gathering steam. A £10-million deal for Motorola's 286 microprocessors, worth £1,500,000, was signed last week with UKOM, a subsidiary of the Europa Systems group.

UKOM is the first UK distributor to be appointed for the Series 286, a range of Unix-based small business machines which will support up to eight workstations. Motorola Information Systems Ltd (MISL) is set up last December to bring Motorola's data communications and data processing and office automation expertise together, will sell direct to some national accounts.

It is also talking to distributors in other areas, but UKOM will be the major UK distributor for Unix-based applications. Both companies take the view that Unix will become the industry standard operating system. UKOM's chief executive Alex Lothian said he expected sales to reach around £6 million in 1984, with UKOM becoming one of the major forces in the UK micro market.

Series 286 will be supported by a range of applications software. Software distributorships have already been agreed with major houses, including Microsoft, Logica and Precision Software. UKOM will also offer customer training and education through Multi Media Editions, another Europa subsidiary, set up specifically to do Unix training. Motorola will provide hardware maintenance through its national network of support facilities.

No dealerships have been awarded yet but Lothian said there are plenty of candidates. "I estimate we will recruit around 25, but the important thing is to cover all aspects of the market. If we can do that with 10 dealers that's OK, if it takes 50 that's OK too." There are three models in the Series 286 family. The 220 and 240 models have Motorola 6809E processors with up to 768 Kbytes of memory and run ISOS, Motorola's Unix-like operating system. The 260 model has a Motorola 68000 chip with up to one Mbyte of memory. According to Rodney Turvey, managing director of MISL, the series has: "A strong repertoire of remote communications capabilities."

MISL was formed from three Motorola-owned companies, Codex, Universal Data Systems and Fair Phase. The UKOM deal is the first distributorship since MISL was launched but Turvey promised that 1984 would be "an exciting year for Motorola, with pending announcements of new products and an anticipated profitable growth in our UK data processing and data comm."

LOTHIAN... "Important to cover all aspects of the market."

SALES BRIEF Olivetti building society deal

BRITISH Olivetti has secured a million order from the UK's biggest building society, National & Provincial, for counter and back-office system. The equipment, the Olivetti's Line 1 processor, will be installed over the next 12 months and will eventually serve 1,250 counter positions in the society's 366 branches. Olivetti supplied four of the building societies, the others being the Abbey National, the Alliance and the Alliance.

Logica order

LOGICA has signed a £1.5 million contract with the government for supply of a large handling system for Tandem computers. The system will be part of a classified system covered by the Official Secrets Act, and it will make use of a communications software package developed by Logica.

BBC mini

BBC Enterprises, the commercial arm of the BBC, has bought 11700 super-mini from Harris £90,000 contract. The system will help the BBC keep track of its programmes sold abroad and provide online accounting information.

PA contract

TWO companies of the UK consulting group are to share a £250,000 contract with the government, to study the needs of Belgian telecommunications. The study will include an assessment of the role of telecommunications in the Belgian economy.

Cray success

CRAY RESEARCH has announced its first order from the Middle East. Arabtec America (Arabic) has ordered a Cray M for use in petroleum research simulation at its engineering centre in Dhahran in Saudi Arabia. The contract worth around \$10 million.

Navy's Prime

THE Royal Navy Staff College at Greenwich has ordered a Prime 2250 computer to help teach basic computing skills to officers. The machine will be used at three levels of training to officers up to the rank of commander for demonstrating use of work processing and graphics and solving financial problems.

Hoskyns sale

HOSKYN'S has sold the IBM version of its Financial Control System (FCS) to the Howmet Tube Components Group for applications including online update and enquiry. FCS is the first of a new generation of modular application systems from Hoskyns.

Warwick link

THE University of Warwick has completed installation of a local area network supplied by Intelsat Electronics of Reading to Link 80 sites. The contract value is over £20,000. The network links the central Computer Centre with nodes in various science and arts buildings.

£1.25m contracts

BRADFORD-BASED Yorkshire Building Society has signed contracts worth £1.25 million with Honeywell and SPL International for a new computer system. Honeywell will supply the central system, two coupled DPS 755s and two Datanet 2 communications processors plus a DPS 654 mini for data entry, while SPL will develop software for counter-top terminal applications based on an existing building society system running on Honeywell kit.

EEC eases rules on research

by Philip Hunter
THE EEC is to make it easier for large companies to team up for research and development by exempting such agreements from competition rules.

At present firms have to notify the EEC if they want to combine on R&D, which can result in long, tedious discussions.

ICL, Siemens and Bull had to go to the EEC for approval before setting up their joint research centre in Munich, which is just beginning research in artificial intelligence.

In future agreement would be automatic. The EEC member countries have already agreed in principle the new proposal, which would automatically exempt R&D agreements from Article 85 of the Treaty of Rome, which forbids joint projects that distort or prevent competition.

Even production agreements could be exempted, so long as they are based on the joint research.

But there is a qualification that only one of three leading companies in the field can be involved, and the combined turnover of the companies must not exceed 500 million Ecus (£285 million).

Failing this the plans would have to be scrutinised individually, as before.

The new measure is being pushed hard by Frans Andriessen, commissioner in charge of competition, who believes strongly in a free market unfettered by artificial constraints. The main objections to the proposal have come from the French, but these seem to have been overcome.

Similar moves are afoot in the US, with the Reagan administration now pushing the National Productivity and Innovation Bill before Congress. But this does not go as far as the proposed EEC measure because there is no automatic exemption from competition rules.

IBM set to dominate local area networks

by Donald Kennett
IBM is more likely to dominate the market for local area networks in Europe than in the US, according to US market researchers International Resource Development (IRD).

Although IBM is a late entrant to the LANs market, IRD's report "European Local Area Network Markets" suggests that it has several factors in its favour here. It knows the European telecommunications market from its experience of marketing PABXs since 1969; there is no European equivalent to AT&T to challenge it; and European users are more wary of LAN technology than US ones and therefore particularly likely to go for a big name supplier like IBM.

IBM showed its token passing ring LAN in public for the first time in October, having submitted a standards specification to the US Institute of Electrical and Electronic Engineers (IEEE) nearly two years previously. It says

that the system is a research project and contribution to standards efforts only at this stage. It has made no announcement that it will launch a LAN product at all.

But IRD says that IBM LAN products - being developed under the code name Alligator - will be on the market by the middle of this year.

By buying into Intel and Rolm, the US semiconductor and PABX companies, IBM has acquired a stake in advanced technologies that are relevant to LANs, IRD says, whereas its own PABX is obsolete.

And it is master at being second into the market, the company adds. This is an expertise it may well need to draw on, since AT&T Technologies (formerly Western Electric) launched its LAN product, called Datakit, last month.

*European Local Area Network Markets, 1989, \$1,450, from I.R.D., 30 High Street, Norwalk, CT 06851, US. Telephone: 0101 (203) 856 6914.

French give thumbs down to videotex

by Jack Gee
THE French government is failing to persuade the man in the street to accept videotex. Its problems are highlighted by the decision of the city of Grenoble to abandon a local information service provided by terminals at the Town Hall and in other public places.

The conservative municipal elected last year has scrapped "Claire", a venture sponsored by the socialist administration in Paris to provide Grenoble with a database containing 12,000 "pages" of facts and figures about social and other facilities for citizens.

Gaullist Mayor Alain Garignon had to all intents and purposes shelved Claire since he was voted into office in March 1983.

But Claire could bounce back even more strongly in 1985 when the Ministry of Telecommunications installs 30,000 Minitel terminals, the basic units used for access to France's Teletex videotex networks, in Grenoble and neighbouring centres.

The Minitels offer the area,

which lies at the heart of a popular skiing and mountain resort area in the Dauphine Alps, access to France's electronic telephone directory to which phone subscribers in parts of Paris are being booked up.

Claire went online in February 1982. But the system lacked sufficient user friendliness to be accessed by the ordinary citizen seeking information about public day nurseries, baby sitters, hospital facilities and leisure.

Hostesses had to remain on duty to put the Grenoble's questions to the database which also dispensed pointers seeking information about cinema and theatre programmes. Claire's database was confined to information provided by non-commercial organisations.

The government sponsors were planning to introduce this type of information and also classified advertisements into the range of services offered by Claire.

According to Mayor Garignon lack of genuine public interest gave Claire the kiss of death.

Microdata claims Natural is first

by Nuala Moran
MICRODATA Information Systems has released what it claims is the first commercial fifth generation software, Natural Language. "This heralds Microdata's entry into fifth generation technology," said Jerry Causley, Microdata's managing director.

The company also expanded at both ends of its range with the announcement this week of a desktop workstation, the M1000 at the bottom, and a doubling in the performance of its top-end system, the Sequoia.

Causley said that with these announcements Microdata should no longer be regarded as a minicomputer company. "We are becoming like a mainframe supplier but without the problems they suffer in compatibility terms."

Natural Language has been superimposed on Microdata's existing English inquiry facility and coupled with the Applications Language Liberator (ALL) to develop the Microdata Relational Environment (MRE), a new architecture. Five versions of MRE are available, the most expensive costing £5,000.

Using Natural Language, a user without any computing background can talk to the system, which will respond using English phrases. The software allows the computer to draw inferences appropriate to particular users which it then "learns".

This "learning" information improves user performance, allowing them to target correct answers faster and more efficiently.

As users become more conversant with the system they will be able to use a prompter, which tells the user what can be done by listing commands the machine uses.

Microdata's workstation offering, the M1000, can be used standalone for local applications or can be linked with shared peripherals and communications to a host system. The operating system is MicroReality, Microdata's mini operating system.

All applications for the M1000 run on the Microdata Reality and Sequoia systems. "This gives Microdata a database range from £6,000 to £1 million which is fully compatible, avoiding mid-range conversion," said Causley.

CAUSLEY... "Entry to fifth generation technology."

IF YOU GO DOWN TO WHICH COMPUTER SHOW, YOU'RE SURE OF A BIG SURPRISE.

Newbury Data has lots of surprises at Which Computer Show. A new 5 1/4 Winchester Disc Drive with 140 Megabyte data storage. New Matrix printers with near letter quality typeface and one with speeds of 160-800 lpm.

new low cost VDU/s with features more expensive models would envy, and a 5 1/4 inch space saving VDU for the executive desk. Plus our IBM Protocol Converter, media products, and lots, lots more.

Newbury Data stand No. 618 Hall 4.

Students are off to US for program competition

by George Black
FIVE computing science students from Thames Polytechnic are off to the US next month to try to win an international programming competition. It is the first time a UK team has taken part in the contest, run by the Association of Computing Machinery (ACM), in its 13-year history.

The foursome, led by the president of the UK student chapter of the ACM, Tim McNally, has been practising here on a Hewlett-Packard 3000.

A total of 24 teams from all over the world will take part. They have to solve a series of six problems and are given a choice of three languages, PL1, Pascal or Fortran, to present their solutions in. The winning team is expected to take about six hours to find correct answers to all the problems.

Lecturers at Thames Polytechnic have been devising model problems for the students to practise with. Prizes will be £1,000 for the winning team.

The team has to raise £8,000 to take part in the competition, including air fares and accommodation in Philadelphia. Promises of sponsorship have been made by government, MPs, private com-

BATER... "We're going to win."

panies and other organisations, headed by contributions from the Department of Trade and Industry and Sir Clive Sinclair.

At the time of *Computer Weekly's* going to press, they still wanted some £5,000 to support their bid to bring the title of champions back.

The other team members are John Cavanagh, Duncan Macmill-

lan and Robin Bate - aged from 20 to 22. Asked about the team's chances, Bate replied: "We're going to win."

He said they had had a lot of experience and had been practising hard. The Americans saw them as no-hopers, but it would turn out to be a David and Goliath struggle, he predicted.

CRA urges societies to co-operate

by Keith Holder

GREATER co-operation between microcomputer trade associations has been urged by the Computer Retailers Association (CRA).

Overall aims of the Association will remain the same, though greater emphasis will be placed on working towards a "confederation of computer associations" to act as an umbrella for similar organisations such as the Computer Services Association, National Computing Centre and the British Microcomputer Manufacturing Group (BMMG).

The Association will also try to encourage use of its code of practice over wider areas of home and professional use.

It plans to investigate how much "common ground" exists between associations, with the aim of co-ordinating individual action. Co-operation could lead to more meaningful industry statistics,

which had been criticised in the past by manufacturers, said a spokesman.

The CRA plans to broaden membership, including retailers, dealers, distributors and OEMs. There will be a new fee structure to make it easier for small companies to join.

Representation at government level and establishing international links with similar organisations designed to increase policy decisions and promote specific issues more effectively, have also been given approval.

David Broad, chairman of the BMMG, said that he welcomed this move and would support co-operative efforts "with enthusiasm".

He warned, however, that for any collaborative effort to be effective, the issues to be covered would need to be of sufficient interest to all parties involved.

Dates are set for trade conference

THE Computer Trade Conference, where the trade talks to trade, is taking place at the Wembley Conference Centre, March 13 and 14. Sponsored by *Computer Weekly* and *Micro*, the Computer Trade Conference is aimed at the serious computer products. Addressed specialists from all companies will present their views to the conference on how to tackle third party sales. The conference, which runs alongside Computer Trade Show, is its second year.

Philips deal

PHILIPS has signed an agreement with Endate, the information systems subsidiary of the state energy group, ENI, for production and sale of video software. Endate will have the marketing rights for Italy, the companies intend to go to other markets. The agreement complements an existing hardware partnership.

Apply by modern

TELECOMMUNICATIONS maintenance managers and technicians have been invited by a company with Middle East contacts to submit their job applications via a 400 Fii-per-second modem by telex. The unidentified company advertised in the *Daily Press* last week through the Montin of Pudsey in Yorkshire.

Dealer network

A MICROCOMPUTER specialist house in Yeovil, Somerset, is nationwide with its state-of-the-art and properly managed packages by setting up a dealer network. Blue Chip Microsystems appointed AMG Consultants to co-ordinate the network and to support dealers. Blue Chip packages run on Sirius, One and Torch computers. They already used by 53 firms in over 10 offices.

Burroughs pays

BURROUGHS and UK firm CMG have paid "substantial" damages and costs to public Harpur over the alleged non-performance of a business system. The out-of-court settlement described as "satisfactory" by both sides. Harpur was claiming £420,000 in damages. The system installed in 1976, was based on 8700 minicomputer and Burroughs' Business Management software.

UK subsidiary

ATHANA Inc of Los Angeles set up a UK subsidiary in London. The company manufactures recording 5 1/4 inch diskettes and Windows discs. Athana is in the process of establishing a network of distributors in the UK and on the Continent, which it will support from its new office.

Plessey offices

PLESSEY Microsystems has set up offices in France and West Germany. They will market the company's commercial computer systems - the System 19 range of workstations and the Unix-based System 68 micro, its Multibus and Versabus-compatible memory and processor boards, and several environment products.

Micro contract

PROGRAMMES Limited has signed a deal with SIB Computers of Nottingham to sell SIB software on all the microcomputers through its subsidiary, Programmes Technology. The programme Technology was set up two years ago, operating mainly through telephone sales.

TIMPANY... Collaboration is "an open-ended agreement".

Tories plump for Tycom micros

by George Black

THE Conservative Party is to take around 200 Tycom micros over the next 18 months to bring its constituency organisation into the electronic age.

The Tories' central office is to recommend the British-made Microframe machines to its branches, with a choice of software packages, costing between £4,000 and £5,000. The aim is to introduce computerised mail-shooting of the electorate on the pattern already used in the US, as well as automatic membership records and subscription accounting.

About 20 Conservative local associations already have machines of various types, but now party bosses want to standardise on one make.

The idea comes from deputy chairman of the party, Michael

Spicer, MP for Worcestershire South, who was the first to get a Tycom micro this week.

Allen Timpany, Tycom managing director, described the collaboration as "an open-ended agreement". He said the company would be looking at ways of connecting the micros to the ICL ME29 miniframe purchased by the party before the last general election.

The Microframe supports both BT Gold and ICL protocols. Specialised application software for the Tories has been written by Resource Management of Bristol and tried out in the Bath constituency.

Timpany hopes the new link with the Tories could prove a useful handle on the export market through its members at the European Parliament. Tycom

managers are visiting Brussels shortly to try to boost sales abroad. Meanwhile the Labour Party says it is leaving it up to individual local parties and MPs to choose their own hardware, though it has forged an alliance with Acorn, which is supplying suitable programs in the BBC Micro.

Labour's computer expert, Harold Fryman, said the micros were used mostly for word processing. Few local parties would be able to spend £4,000 on a machine, he said, while members would do envelope-addressing.

"We don't work that way because we are a devoted party," commented Fryman.

Labour is to ditch its ICL 2900 and use a Hewlett-Packard 3000, backed up by a Fortune 16/32 high-powered micro.

Commodore unveils a new computer for home market

by Philip Hunter

COMMODORE last Saturday unveiled a new home computer with a range of built-in software and a Unix look-alike operating system at the US Consumer Electronics Show, Las Vegas.

"It is aimed at the fastest growing sector of the home market, people using a computer for computer's sake," said David Harris, company vice-president. "It will be much more of a computer than a games machine."

The machine, code-named Ted and to be sold as the Triple Four, uses a new 6500 series processor developed by Commodore.

Volume shipments begin in the US in April, but the machine is unlikely to be available in the UK

until 1985, given Commodore's previous record on exports. The portable version of the Commodore 64 has only just become available in the UK, almost two years after its launch at the 1982 Hannover Fair, for example.

Prices for the Triple Four have yet to be announced, but a figure of \$500 has been widely circulated among US dealers. This is well below the \$669 for the PCjr to be sold this year by IBM.

But this price brings the risk that the Triple Four will harm sales of the Commodore 64. Partly to offset this risk the new product has been designed not to run 64 software.

This move has already been criticised by US software houses

and dealers, who claim it will force them to dole out their stock of software or choose between the two machines.

Harris said that there was a wide range of serious applications software wired into the new 6500 processor used by Triple Four, including spreadsheet and graphics-making packages, as well as extended Basic.

Commodore is also expected to announce soon a micro based on a new 28000 processor, following the link up with Zilog last year. This will be the first Commodore machine not to be based on a processor developed by the company's MOS Technology 6500 series chips.

BBC will broadcast program by radio

by John Kavanagh

A HIGH-PITCHED screech will be broadcast by BBC Radio Four at 12.23am this Sunday, just after the shipping forecast. It will be the BBC's first radio transmission of program code.

The programs are being broadcast as part of a new 10-week series in microcomputers. Called The Chip Shop, the series will be presented by film buff Barry Norman. It is aimed at home and business computer users and will be a mixture of news and feature material.

Users hoping to record and use the program code will need a converter package called Basicode, supplied on cassette by the BBC at £3.95. This converts the

transmitted code so it can run on different machines.

Basicode was developed by the Netherlands broadcasting authority and is also used in West Germany, Belgium, Canada and the US. Under its agreement with the Netherlands authority, the BBC is not allowed to sell Basicode as a commercial product for general use.

The Chip Shop will be on at 5pm on Saturdays, with a repeat at 11pm on Tuesdays. The programs will be transmitted every Sunday, Tuesday, Wednesday and Saturday at 12.23am.

Further details can be obtained by sending a big, self-addressed envelope to Factsheet, The Chip Shop, BBC, London W12 8QT.

Young blood scheme has mixed response

by John Kavanagh

A £13 million government scheme to attract new, young blood into university research and teaching jobs in information technology has had a mixed response. In the last year 57 of the target 70 posts were filled. All 2,000 student places created were filled.

Government figures suggest competition from industry has been the biggest problem. Around 80% of the posts were filled by people from universities and another 10% by research institution staff. The number of appli-

cants for each post was 11, far lower than for jobs in other subjects.

The Department of Education and Science suggested that even when people from industry applied and were offered jobs, they were often then made better offers by their employers.

The need to attract young blood arose because of university expansion in the early 70s. Young people taken on then are now middle-aged. Studies show that most major innovative research is done before a person is 35.

Service will offer small firms advice on micros

by Dave Madden

ARTHUR Andersen, one of the big accounting companies, has set up Microguide, a micro advisory service for small businesses.

The company will offer Microguide consultancy to both existing Arthur Andersen clients, and to new, independent customers.

The service will consist of hardware and software recommendations, and Andersen will manage the installation of systems or supervise third party suppliers, run systems tests, develop control procedures and give user training.

There is no standard charge for Microguide advice, and customers will be billed on consultancy time. The company said that this should be contained by using checklists of commonly requested features to define user requirements.

Although Arthur Andersen has a considerable management consultancy division, which does systems consultancy in larger organisations, Microguide will be managed by a dedicated unit working through the company's audit divisions in all its UK offices.

According to Clive Leyland, who heads Microguide, the service has met with an enthusiastic reception.

Arthur Andersen is not the only accounting firm to offer microcomputer consultancy to its smaller audit clients. The Computer audit service department of Deloitte, Haskins, Sells, claims to have been first into the field.

Improving the service can cut you dead

by Donald Kennett

THE next time your terminal drops a dialled connection for no apparent reason or you get cut off in the middle of a telephone conversation, you should be able to think more positively about the experience as a result of seeing the above picture.

You will realise that your inconvenience could be the mark of yet another step taken towards a more reliable, higher quality service based on electronic rather than electro-mechanical technology.

The picture shows British Telecom engineers (wearing their Telecom ties) pulling 10,000 plastic wedges out of the equipment

locks in Deal telephone exchange to transfer subscribers from the obsolete Strowger system to the more recent TXE4 electronic system.

The wedge-pulling process takes a few seconds, during which any calls in progress are lost. But BT points out that the ceremony is usually performed early in the morning, when few calls are being made.

Hospitals and emergency services are covered by special arrangements that protect their calls from disruption. But lesser subscribers must endure the effects of this pragmatic marriage of high-tech and low-tech.

Study outlines comms needs

by Donald Kennett

PLANS to integrate voice and data communications are a high priority among sophisticated US users, according to the US market research company, Strategic Inc.

In the two volumes of Strategic's eight-part multi-client study "Local Communications Systems which deal with the roles of PABXs and LANs (local area networks), the company surveys 50

user sites and finds that planners at nearly all of them want to integrate voice and data to prepare for growth in communications traffic. Different techniques are being tried to achieve this, with PABXs and LANs linked by gateway devices being used on more than half the sites.

Local Communications Systems, Published in Europe by IPI, Nether Ringel 201, 2600 Grootweg, Den Haag.

WILLIAMS... "Solid concept."

NEWS ANALYSIS

Members decide on union merger

Nuala Moran looks back at the steps taken by one telecomms group trying to join another

A DECISION is expected tomorrow on whether the 6,500 strong telecommunications group of the Society of Civil and Public Servants (SCPS) will transfer to the Society of Telecommunications Engineers (STE).

Although this would bring the British Telecom unions nearest the long-held ideal of one union for all BT employees, it is not a happy step as far as the SCPS telecommunications group chairman Mike Wohl is concerned. "This move has been forced on us by plans to privatise BT and by the politics of the BT trade unions. These factors are not related, but they have conspired to make our position untenable," he said.

Members of the SCPS telecommunications group include 1,200-1,300 data processing staff, and finance, general administration, training and public relations staff.

Tearing up BT for privatisation has meant various changes in structure. One of these was the setting up of the Management and Professional Structure (M&PS), which covers all STE and SCPS telecommunications group members, plus a handful of Civil and Public Ser-

vices Association (CPSA). The idea behind M&PS was to make it possible to have mixed function groups that can be task-oriented, with a manager who has responsibility for seeing a project through. This replaced functional hierarchies such as the engineering policy group and the accommodation policy group.

The structure gives the areas more autonomy, with the proviso that they show profits, and removes the possibility of demarcation disputes. It also means changes in pay scales, gradings, appraisals, recruitment and grievance procedures.

BT tried to make a condition of wanting one union to negotiate on behalf of the people in M&PS. It started talks on the structure with the STE and, Wohl claims, there was no attempt to tell the telecommunications group of SCPS about the negotiations until first proposals had been drawn up, compromising the group.

"This meant we didn't have the chance to negotiate at all on the M&PS," he says.

An STE spokesman says that

the union was not at fault in starting the talks without the SCPS telecommunications group, because it made it quite clear to BT that it was only negotiating on behalf of its own members. "When we were approached over M&PS we were faced with something we had to take or leave. If we hadn't negotiated we would have had something worse forced on us."

The telecommunications group complained that BT, by saying it wanted to negotiate M&PS with one union, had made an unwarranted interference in union affairs. BT modified its position and said it was prepared to talk to one union body representing the telecommunications group.

Wohl says the SCPS telecommunications group rejected this, because it would be unwieldy. Also the STE, representing more members, would get the lion's share of the negotiations. Thus the telecommunications group would always be outvoted, which would undercut its effectiveness at representing its members.

"As a result we saw that the best way of defending our members we

had was to consider joining the STE and trying to change its policy from within," says Wohl.

Pressure on the SCPS telecommunications group has also come, according to Wohl, from the British Telecommunications Union Committee (BTUC), the joint body of all the unions with members in BT. The BTUC was set up in 1981, following the split of the Post Office and British Telecom.

The SCPS telecommunications group was granted full status in the BTUC, but only on the condition that it rationalised, that is left the SCPS and joined one of the other BT unions. Last summer the telecommunications group membership of BTUC was only renewed on the grounds that it carried this out before December.

Wohl contends that this time pressure was unfair. "We always understood that we were members of the BTUC on the basis that we rationalised. But the pressure as regards time undercut us in a big way."

Alan Chantlerlain, chairman of the BTUC, said: "When the

telecommunications group joined the BTUC, it was given full constituent status for one year, provided it took steps to hold talks with other unions to transfer. These arrangements were then extended to the end of 1983. As this was the basis on which the telecommunications group accepted membership, I think it quite fair that it should stick to it."

On the face of it, the telecommunications group had a number of options when it started negotiating to join another union last year. According to Wohl, "We had six months of demoralising work trying to open these options up."

The inevitable choice was to join the POEU. This was because the POEU cherishes the plan of one union of all the people working in BT, and, as the largest union in BT, it would obviously be the basis of such a combined union. "We decided we might as well join the POEU straightaway, as have to transfer again at a later date. Also, the POEU is a powerful union," says Wohl.

Wohl says it was recognised that problems were likely in persuading some telecommunications group members to transfer from a white to a blue collar union. But those problems did not arise, because the POEU turned down the telecommunications group on the grounds that it would mean establishing a management group.

Although POEU policy is to have one telecommunications union, it has a fixed plan of how this should happen. Under this plan the first step is for the STE to join the POEU. It was proposed at last year's POEU annual conference that steps be taken to bring this about, but the motion was rejected.

Bryan Harper of the POEU says: "The members felt they did not want a union which represents the supervisory grades joining us."

Anti-STE feeling exists among

the left wing national executive of the POEU, because it thinks STE was equivocal on support for industrial action against privatisation.

The proposal that the telecommunications group should join also rejected. The feeling was it would be a Trojan horse, as once there was a management group in the POEU, it would be hard to prevent the STE being absorbed as well.

Harper says: "The principle of managerialism in the POEU will not be a live issue for some time to come."

Another possibility that a telecommunications group explored was joining the CPSA. Again then the problem of a management group joining a non-management union.

Members of the SC telecommunications group fall into grades, executive officers (EO), higher executive officers (HEO), and a handful of CPSA members on EO grade. Wohl says CPSA proposal that the SC telecommunications group EOs join them, while the HEOs joined STE, was unacceptable.

In the end the telecommunications group decided that joining STE was the only option. "I thought this wasn't exactly going with our executive, we knew as we stayed in the SCPS we would be booted off the BTUC and couldn't represent our members," said Wohl.

In September last year a recommendation to the SC telecommunications group conference that the executive should proceed with discussions to transfer members to the STE. This recommendation was endorsed. Over last week series of meetings has taken place to seek the approval of the members and results are due tomorrow.

APL users go to the ISO

A BIG drive to make APL the all internationally standardised language reaches a critical stage at the end of this month.

The views of British users are being gathered and will be submitted to the International Standards Organisation during February. A crucial debate will take place in Helsinki in June, and experts are now hoping this will lead to the publication of the standard in 1985.

Other languages have gone via a national standard; APL is doing it the other way round.

Mike Sykes, chairman of the British Standards Institute's APL group, said the result could be the spread of APL among the users of small machines.

"It's far more suitable for them than Basic. The more I use Basic, the more I like APL," he said.

His employer, ICI, is already heavily involved with APL at various sites including Billingham, Northwich, Manchester and Runcorn, on both IBM and DEC hardware.

"It's more important that we have a standard than what it consists of," said Sykes. "We want packages to be able to run on more than one machine."

Paul Barneison, of IBM Portsmouth, is co-ordinating the British submissions on the draft standard, but warns participants they will have to wade through a 350-page document.

"How often have you travelled abroad and found that your razor won't plug into the socket? That's how important the problem is," he observed.

Some 40 local authorities now use APL, almost all on IBM equipment. The local government APL user group is surveying existing APL applications in an attempt to cut down on duplication.

One of the major contenders in the APL software market, the international bureau I. P. Sharp Associates, last month introduced an IBM-PC implementation of the language compatible with its mainframe version. The same niche is being attacked by the London specialist Inner Product.

APL director Dominic Murphy pointed out that the US government would not buy any software which did not have the ISO stamp, so this step could open up a large export market.

He said IPL would not be contributing to the discussion because it had looked at the draft already and approved it.

Green Paper opposes copyright

HUGHES... Discontent, the Trade and Industry Secretary, but financed by customers' fees.

COPYRIGHT should be restricted to literary or artistic works and a new system of registered designs introduced, says a government consultative Green Paper.

The document, written by the Cabinet Office's chief scientific officer, Robin Nicholson, argues that the registered design should become the basis of intellectual property rights available for functional articles manufactured in quantity. Copyright would then be "restricted to what it was originally intended for" - literary or artistic works.

This argument cuts across the views of the current lobby building up in the computer industry, which has been pressing for copyright to be unequivocally established to cover such subjects as software.

The Green Paper urges that the Patent Office be moved off from the Trade and Industry Department to make it more responsive to the needs of customers. It would become a separate body with managers and advisers appointed by

Whitehall is criticised for a lack of awareness and inadequate consultation on the question and is urged to set up a liaison group to overcome this.

Services as well as goods ought to be eligible for trade mark registration, argues Nicholson, and inventors should be allowed to take over their own works if their employers fail to exploit them.

In the Commons in December Junior Industry Minister Alex Fletcher said the government was committed to copyright legislation "as soon as possible". The new law would not wait on a European Commission memo on copyright not due before the second half of 1984, he promised.

Chairman of the British systems house Logica, Philip Hughes, speaking on the BBC-2 programme Beyond 1984, referred to the lack of copyright protection as one of the main disincentives to technological progress.

Alvey half-day seminar

A HALF-DAY seminar on the Alvey Programme, the national effort for the generation of computers, is being organised by the Computing Services Association. It will take place at the Strand Palace Hotel, London, on January 24 and the Alvey directors, headed by Brian Oakley, will answer members

questions on the involvement of small firms in the programme.

Fee expands

FEE, the UK distributor of UFO, Oxford Software Corporation's fourth generation language, is to open a new office in Manchester to serve the northern region. It will take over the distributorship run by Systems Resources in the middle of 1984. A new joint company is being established, owned 70% by Fee and 30% by Oxford.

Software File is compiled by George Black

Pension package offers relief

ONE of the biggest pensions administrators is starting to sell a turnkey system which could relieve many data processing departments of an important function.

Noble Lowndes, part of the Hill Samuel group, has had 16 software staff engaged on developing the programs since April 1981. Their aim was to create a suite to handle the business of 600 private pension schemes offered by smaller companies without their own pensions departments. Annual contributions into those funds total about £250 million.

Noble Lowndes had used the Lowndes Ajax bureau for batch record-keeping and a separate on-line quotation service, but decided it needed to combine the two. The new system was designed to be as flexible as possible.

To accomplish the task, which has cost over £500,000, the team invented its own fourth generation language, spoken only by the pensions fraternity. The complete package, including an integrated test processor and a report generator, is called Laser, an acronym for Lowndes Administration Services. About 360 of the schemes are now

run by Laser, with the remainder expected by April.

Laser is being run on DEC PDP-11s at the firm's Croydon headquarters and at six regional centres dealing with the scheme owners' inquiries. Now systems manager Ken Bulteel wants to sell the package to companies of over 5,000 staff to operate in their own pensions departments, thus taking away one of the traditional jobs of the DP manager.

The first installation was at Westinghouse Brake and Signal, part of the Hawker-Siddeley group, at Chippenham.

The repercussions of the new product are unpredictable. Some DP managers may resist the encroachment.

Although pension funds have recently become topical, with inflation giving them an importance that has attracted the attention of both politicians and trades unionists, in Bulteel's view pensions work has always been the Cinderella of DP.

"Those jobs always get pushed to the back of the queue," he says. "DP people have underrated the complexity of pensions."

BULTEEL... "DP people underrate complexity by pensions."

Data Processing Managers should try this simple cost-cutting exercise

Take the short cut to data processing savings and send for details of Ferranti PT7.

We'll tell you how PT7 can cut investment in mainframe equipment by adding power more cheaply at the terminal. How by connecting the Ferranti pro-personal computer CP/M869 is available at each VDU enabling you to perform industry standard applications, with word processing too, what's more PT7's local processing distributes system loads, easing mainframe "bottlenecks" and allows simpler planning of mainframe upgrades.

We'll show you how PT7 can cut your telecommunications costs by running more VDUs per communication line. And there's further cost saving by more VDUs sharing the same remote printers and discs.

We'll tell you how PT7 can save your data entry costs by running concurrent data entry and interactive work through one console.

PT7 THE ADVANCED ALTERNATIVE TO IBM 3270 AND THE ICL DRS

Ferranti Computer Systems

Will the telecomms unions join forces?

Each and every element that makes a complete computer system must be as good as the system itself. At Systek, every bit is as good as the complete service.

If you're thinking computer equipment, whether it's additional terminals or a larger hardware package - updates to existing software or simply higher performance from your current system, Systek is at your service.

Systek has a full range of DEC* compatibles that can be perfectly matched to your needs - High Speed Diac and Tepea, Controllers, Interfaced and Multiplexers, Advanced Terminals and Printers, standard or bespoke software packages, backed by a full engineering facility.

So whether you're thinking only additional hardware or complete turnkey systems you're already thinking Systek. Call us now or return the coupon.

Please send me further information about The Systek a la Carte Computer Service

I am considering purchasing:

*DEC is the registered trademark of Digital Equipment Corporation

The kid who grew up with enterprise

ENTERPRISE this is Dan Bricklin's blood. Ever since his childhood, Bricklin has been thought up to run his own business, and now the 32-year-old chairman of Software Arts and inventor of Visicalc can look back at his career with more than a little satisfaction.

"If course you run your own business - I run businesses as a kid and got used to people paying me money," he says.

Both his parents and grandparents ran their own printing concerns, and Bricklin backed up this entrepreneurial upbringing with a spell at Harvard Business School.

Bricklin graduated in electrical engineering and computer science from Massachusetts Institute of Technology (MIT) in 1973. That is where he first met Josh Franklin, co-founder of Software Arts and co-inventor of Visicalc.

He joined Digital Equipment and opted to work in the field of computer typesetting rather than systems programming. "It was very practical," he says. "I turned down systems programming because of my background in printing and graphics."

One of his jobs was to typeset obituaries. "You had to get the work out on time and if it was 15 minutes late you heard about it. Obituaries were always the first to be typeset because they wanted

them up to date - and they just had to be right," he recalls.

After three years at DEC he moved, becoming lead programmer with Fasfax, a small company which sold intelligent networked cash registers for the fast food industry.

"That was very interesting," he says. "Head office knew at any one time exactly how many jars of

by John Riley

pickles there were on a shelf. Fasfax showed me that a small company, with a turnover of around \$1 million, could make it."

After a year there he went to Harvard Business School to take an MBA degree. "I thought that there must be some secret recipe you could learn from business school," he explains. "Well, there wasn't any magic, but I did learn how to speak the language of business."

Bricklin is a firm believer in the value of a formal business education. "It means that I could talk to bankers and borrow money, and contracts would have been written up differently without it."

"It is worthwhile for anyone going to set up a company to get business training and experience - or, failing that, to get together with someone who has. At least it means that you don't make gross mistakes," he says.

It was at Harvard Business School that he had the idea of producing Visicalc - "wordprocessing with numbers" - as he puts it. He wrote the prototype in the autumn of 1978 and worked with Franklin to finish it by the summer of 1979. "Bob wrote the program and I wrote the spec," he adds.

After initial problems persuading anyone to take it on, Visicalc was marketed by Day Elyria Personal Software, which later changed its name to VisiCorp. Visicalc was an astounding success, and became the standard spreadsheet application on eight-bit machines.

With success came the accolades. Bricklin can pick out several highlights from those early days. "It was a heady moment the first time I spoke about the product to 200 people, and again later on when an audience of 2,000 people laughed at a joke I'd made."

He remembers with pride winning the Grace Hopper Award, which is a national award for a significant achievement before the age of 30. "I'll never get that again," he muses.

He also became the youngest distinguished lecturer at MIT, although he believes that someone else has now robbed him of that distinction.

Visicalc has attracted hordes of emulators. Bricklin distinguishes

three types: those who steal programs; those who use them without paying; and those who come up with similar products.

He hits out at the first two, but shrugs off the latter: "You always get people who make the same thing with different colours," he says. "But people vote with their pockets. In any case we can't be everywhere."

Bricklin sees the key to software success as ease of use: "Visicalc was designed for ease of key strokes," he says. "We always assumed that the person using it would be in a hurry. We aimed to compete with the back of an envelope."

"The situation we envisaged helping was where, with a 32 Kbytes machine, businessmen managing, say, merger negotiations, facing each other across the table could get the information they needed at their fingertips to make critical decisions on the spot. Every key stroke bothered us."

Bricklin's follow-up to Visicalc, an equation processing package called TKI Solver, is being marketed by Software Arts, which is currently locked in a legal battle with Visicalc.

TKI Solver, which Bricklin calls "engineering basics and word processing", will, he thinks, become the "Skateboard of the 80s". He adds: "It's designed for users

BRICKLIN... "I turned down systems programming."

to get in very deep very early - it only takes 18 pages to learn how to use it."

Bricklin recently came over to the UK for the first time and found a different approach to marketing in Europe.

"At a trade show in the US, people walk in and walk out of your stand quickly. Over here, people spend 20 minutes or so and expect you to have drinks for them

it's a different way of marketing."

Bricklin is not giving away clues about products in the future, but does say that "hot keys" at the moment add window systems and integrated database systems, and he says he is looking at the future for VisiCorp programming. "Representing a computer what you'd put a piece of paper."

Give support to school schemes

OVER the past few years the government has pointed proudly to its microcomputers-in-schools programme. It has claimed to be far ahead of the remainder of Europe in ensuring that every primary and secondary student has access to a computer, and cites the programme as an example of how it is using information technology in education the next generation of the UK workforce.

Last week, however, the programme came in for a barrage of criticism from the teaching profession. The main problem centres on the lack of training that teachers have been given to help them to use the microcomputers effectively as a teaching tool. There are also complaints about inadequate support and software.

Criticism of the microcomputers-in-schools scheme is not new. The main argument is that the project is more window-dressing. It has been reported that the average student will spend less than half an hour on the micro in any given year - possibly playing games.

If the government did not have a microcomputers-in-schools programme, the cries of the critics would be even louder. But that is not really the point. While government leaders go around patting themselves on the back exclaiming what a marvellous thing it is to have all these young children learning the wonders of microelectronics, the teaching profession is tackling the real problem of ensuring that students actually get some benefit.

As it stands, putting a microcomputer in every school is a great government idea - but only great for the government. Once the applause dies down, the teaching profession is left to point out that it is the bemused teachers who are left with boxes of electronics they do not understand.

Some teachers have made a virtue of their ignorance and let the students take over the teaching of computer studies. It makes a good story, is even effective in some cases, but it highlights the problem rather than pointing a way to the solution.

Most secondary schools have formed computer clubs in an attempt to give the avid student more time to work with micros. Usually, however, the demand is so high that some students have to be turned away. That can be a frustrating experience for student and teacher. Whether it means that the students turned away lose their initial enthusiasm is hard to determine, but for some students there may never be a second chance.

One of the flaws in the microcomputers-in-schools scheme is that it came from the Department of Industry, not the Department of Education and Science. There are cynics who say it was merely a way of boosting the then fledgling microcomputer industry.

Central government has allocated some £20 million on the equipment. Now the DES is having to put together another £20 million into software and teacher training.

Teachers properly point out that the computers are of no use without good software, proper teacher training, and even a rethinking of what classroom teaching is all about.

Many of the problems are based on inadequate funding: to ensure that all primary and secondary students get an adequate computer training would cost a great deal of money. The French government, for example, has said it will spend some £120 million over the next few years to carry out a similar plan.

More money, of course, is an easy answer. It is not, however, really a question of money, but of priorities. Last week education Secretary Sir Keith Joseph called for fundamental changes in the educational system so as to raise children's knowledge and skill levels. Perhaps the changes he suggests can be brought about without any additional funding, but the onus is on him to explain how: too many schools are already scraping the bucket to maintain minimum standards.

If potentially useful schemes such as the microcomputers project are to be successful, the government should be prepared to support them properly. Eye-catching gestures might be good for the political party in government at the time, but they are not necessarily good for the country.

1984 and all that...

THIS week's example of the strange things people say about computers was sent in by T. London of Baleroo in Midlothian, Scotland, who wins £5.

Military experts are less sanguine. They see a Soviet military machine running on Vax computers and chips from video games made in Hong Kong.

What about the Unix graduates?

ONCE again the experts from the CCTA have displayed their ignorance about software, its applications and development. Jeff Webb, as quoted in *Computer Weekly* of December 1, claims that "Unix will not achieve the dominance predicted". "It needs someone to come up with another shell and more multi-user facilities", "uses a large amount of resources" and "the public needs user friendliness".

It is fairly obvious that he knows nothing of the thousands of university graduates who are learning Unix and C as the basis for their contribution to professional programming, or nothing of the hundreds of Unix sites linked by networks around the world exchanging vital news and technical information each day. He does not appreciate the power of c-shell (and its similarity to C) or the excellent multi-user facilities provided by Unix on the large machines.

And since when does a good package for public use depend on the user-friendliness of the operating system?

Is a 10-user Unix system with 40 Mbytes costing less than £20,000 expensive when compared to large mainframes costing over £500,000 and supporting 100 users? When memory boards cost less than £2,000 per Mbyte, who cares if you need a bit more memory to support Unix?

No doubt, the CCTA is following its rulebook which says that a difference of £1,000 on a £250,000 contract is more important than real benefits to its users. Mr Webb, you have your priorities all wrong. Why don't you attend a few Unix user meetings? Ask yourself why all the major research institutes are using Unix? Why have many tens of software

houses started converting their software for running under Unix and C to improve portability and productivity? Why have all the manufacturers (including your favourite ICL - only three years after most other companies) introduced Unix?

The most frightening aspect of his public statement is that the entire government software development is in the hands of such people - their view of our industry is through the small mirrors, old ICL installations (using even older software developed by hordes of programmers from scratch), and using non-standard operating systems. They are busy inventing wheels when the rest of the world uses ballbearings or even ready-made cars!

In addition to all the other complaints levelled at the CCTA, perhaps it should dedicate more resources to ensuring that it keeps ACTIVELY in touch with the outside world: getting its trades list computerised so that it can learn all possible providers of services, regularly about its needs; buying more ready-made packages; learning what software engineering of the 80s and 90s is all about.

not British Automated Clearance Services as quoted, it casts some doubt on the rest of his article.

Don't count on the Russians being wrong

"HEAR, HEAR" to H. R. Simpson ("It will be a disaster if Aha is the basis of real time systems in the 1990s" - *Computer Weekly*, December 15).

But any hope that the Russians might make the mistake of copying Aha for their own advance warning systems running on basic European copies of yesterday's microchips is surely a fatally misplaced. After all, their missiles are pointing at us.

PLATFORM

Putting a record straight

Don Yeates is chairman of the British Computer Society Systems Analysis Examination Board.

DURING November and December, various articles appeared in *Computer Weekly* about the work of the Systems Analysis Examination Board and the changes the Board is making to its examination syllabus to introduce structured methods.

The purpose of this Platform is to present the facts as the Board sees them, and to do that, we must first of all look back a few years. The Systems Analysis Examination Board was set up in 1967 by the British Computer Society. Its job was to establish, organise and run an examination system for a new basic systems syllabus which had been prepared under the aegis of the National Computing Centre.

This original syllabus, and two others for preparatory courses, formed the basis of the then National Plan for Systems Training. In parallel with this activity, the NCC prepared training packages for all syllabuses although the one for basic systems became the most widely used.

Over the following 16 years the role of the Board has developed and the position of the NCC in relation to the Board has also changed. It will be helpful to summarise the present roles.

The Board has three responsibilities: to set up and maintain a syllabus appropriate to the training of new systems analysts; to approve new courses and course providers and ensure that standards are maintained; and to examine students on completion of their training through a stable and fair examination system.

As a commercial activity outside the control of the Board, the NCC produces training materials which it sells or hires to people wishing to use them. The use of such materials however is not a requirement for approval of a course.

The courses themselves are run by a variety of organisations, and looking back over 1983, I see that 49 different organisations actually ran 111 courses leading to the Board's examination.

From time to time, the Board carries out a major review of its syllabus in consultation with its examiners, tutors and employers, publishes a new syllabus and sets a target implementation date. Just such a review has resulted in the issue of a new syllabus.

In September, this was presented to examiners and tutors. As a result of this meeting, the implementation date was put back until January 1985, thus extending the length of time during which the old syllabus will continue to be used.

The Board believes that the introduction of structured methods into the routine training of systems analysts is essential if systems methods are to evolve fast enough to produce the kinds of systems users need.

As has always been the case, course organisers are free to choose how many of their courses are run to the Board's new syllabus, but the Board earnestly hopes that more and more analysts will be trained through an increasing number of courses in the new methods embodied in its syllabus. Indeed, we believe that the press of events will increase the speed with which users change over to structured methods.

DOWNTIME

Progress back-firing

IN these days of word processors and electronic typewriters, the job of writing has become much less of a grind than it was two or three years ago. Companies can now use their own technology to churn out advertising puff - hours of heart (and dictionary) searching by authors have been replaced by a single key which can produce reams of nonsensical stuff so beloved of the advertising industry.

Take the following, for example. "Never in the history of computing has such a revolutionary new leap forward in technology been achieved by the application of our talented design team, linked

with the very latest decision support systems and advanced CAD/CAM installations..." and so on.

But the publishing industry is still slow to adopt new technology. Take for example the experience of ICL. You'd expect its technical authors to be using the very latest in text handling. Indeed, new technology is used, but by data entry girls. Due to union pressure, the poor old writers are required to write VME manuals out in long-hand before passing the manuscripts to the data prep department.

Who said new technology replaces jobs?

The taxman cometh

AMIDST the new year greetings from trade unions (like Happy New Year and death to the Tories, to quote just one example) in my latest copy of *Labour Research*, I came across an interesting little article on tax evasion by large companies.

And interestingly enough, a simple means of disposing of the

odd \$10,000 plopped on my desk the very same day.

For this modest sum you can be the proud owner of a two-volume report on trends in the converging fields of telecommunications and computing.

Well, it's got to be better than giving it to the taxman.

10 YEARS AGO

FROM COMPUTER WEEKLY OF JANUARY 10, 1974: ICL restored its 60% share of the local government market - recently under attack - by winning orders from two local authorities... Seleen bid for a 76% share in a French bureau firm, SETM...

"The data preparation department is ready when you are, Brother Dominic."

Complicated

INFORMATION technology is a wonderful thing. Look for example at the recent acquisition of 25% of Olivetti by AT&T for a modest \$260 million. Coincidentally, someone from Olivetti rang me up only last week asking for information. He wanted to know an address. The address of AT&T. Now it is quite likely that they only wanted to know if the cheque was in the post, but one wonders just how good all this information flying about is. If it's all coming from me, God help the world.

Meet the family

Meet General Automation's Zebra family - the first range of micros, minis and superminis to use PICK.

• Zebra 5500 - top of the range, this horn leader heads off all the competition.
• Zebra 3500 - a natural Number Two, compatible with all the family.
• Zebra 2500 and 1500 - full of ambition, these youngsters could break away and form their own group, but always keep in touch.

• Zebra 750 - the baby of the group, but with the same characteristics as the rest of the family.

Like any family, ours has lots of features in common - perhaps more than most. Whatever your size of problem, our user or dealer, don't miss why you'll want to find out more.

GA created the whole Zebra family around the PICK relational database operating system. And that means compatibility. A power to speed ratio better than many micro responsive minis. New

standards of ease of use and friendliness for all users. Families want to talk to each other and their friends. GA are the first to introduce goal communications and local area networking on PICK-based products. The family can converse with each other and any other PICK system.

Families have different problems to solve. Choose from a comprehensive library of installed application packages ranging from accounting to parts explosion, from property management to solicitors' records and make use of PICK software tools for system generation, word processing, financial modelling and graphics.

Families like to feel protected. GA's worldwide hardware and software support gives users that extra step involvement whenever needed.

Configuration possibilities:
• MC68000-based range of processors.
• From a 1 user desk-top to a 50 multi-user system.
• From 10 MByte to 632 MByte Winchester.
• From 128 KByte to 1.5 MByte memory.
• From 250,000 to 1,000,000 plus.

For further introduction or an invitation to meet the Zebra family in person, please contact: Marketing Services Department, General Automation Ltd, Stirling House, 20, Station Road, Gerrards Cross, Bucks SL9 8BW. Telephone: (0753) 898112

GENERAL AUTOMATION

General Automation has over 30,000 installations in 42 countries in commerce, industry and finance.

Keep calm—the new Fortran won't change the language

Brian Meek allays the fears of Fortran fans who are anxious about the proposed BSI standard

I EXPECT BSI to publish during 1984 a draft for comment of a new British standard, called "Method for Specifying Requirements for Fortran Language Processors". As I am secretary of the drafting committee, and the current working version exists as disc files in my space allocation on the Queen Elizabeth College Vax, I know that this working version is getting towards a publishable state.

The aims of the project to produce this new standard are at once very modest, and very ambitious. There have been certain frictions of alarm in the Fortran community about what we are doing, because some people have the idea that it is very ambitious in the areas where in fact it is very modest!

One thing this standard will not do is change the language despite what some have thought. Quite the reverse: one of our main intentions is to promote the use of Ansi standard Fortran 77 and enhance the value of that standard.

Strict conformance to that standard is indeed a prerequisite, the first requirement that the draft British standard will specify: so

The aims of the project to produce this new standard are at once very modest, and very ambitious

much for the groundless fears that some have expressed, that Ansi Fortran and BSI Fortran would somehow be in conflict.

This is not to say a programmer will not find it wise to modify his Fortran 77 program in order to gain the maximum benefit from the new standard. He will not be forced to; a standard-conforming program will still be a standard-conforming program, and if it is run on a processor which meets a BSI-conforming specification it will retain all the benefits that the Ansi standard bestows. In this context, processor means the hardware and software system on which a program is run.

In fact, it will gain more benefits, since the BSI-conforming specification will ensure a certain minimal level of quality in the way it is processed. But by making note of the British standard and designing the program accordingly a programmer will gain more: an assurance that, in addition, the program will run, and in a more predictable way with consistent results, on processors which meet BSI-conforming specifications.

On processors which meet only the Ansi standard but not a BSI-conforming specification, the program will just have to take its

chance, as it does now; but in that respect the position is no worse than before.

The new standard does not seek to take away anything from anyone — not even freedom of action. What it does is to offer something extra to those who, within the wide range permitted by the Ansi standard, wish their Fortran process-

It will be possible to use it as a checklist of features to look for

ors to have certain properties, in the interests of greater portability and greater predictability. This is why I say the aims are modest.

Specifically, what it offers is in effect a set of guidelines covering a wide range of properties, and a standard, systematic way of specifying those properties.

To be sure, the standard is being drafted deliberately to allow someone who wishes to lay down a very tight and rigorous specification for a processor to be able to do so. But there are many ways to use standards and the mistake should not be made that this (which could be regarded as an extreme) is the only way.

If we had wanted to put implementors in straitjackets, we would be producing not a standard way of producing specifications, but a standard specification — a very different beast. With a standard specification, the standard itself lays down the requirements (as the Ansi standard does for Fortran programs) and, in principle at least, some testing agency can validate products against it.

In this case, the standard provides rules for its user to follow but it is the user who specifies his requirements — and of course it is the user who then determines whether the product meets his needs. This difference is crucial to understanding our intentions.

One step down from a rigorous specification of every feature is for the user to produce his specification but omitting or softening items which are irrelevant to him.

To take a simple if unrealistic example, if he knows he is never going to use character data there is no need for him to specify requirements for it.

Although a specification produced like that will not technically conform fully to the British standard, it will have far more commonality with other such specifications than can ever be the case if no standard existed. More important, however, the processors themselves which meet such specifications will have much greater commonality than is the case today.

One of my greatest hopes is that

implementors of Fortran will still use the new standard, even if continuing to work with the untrammelled freedom (or licence) which, thanks to the anarchic tradition, they have come to regard as their birthright! I hope they will use it to write their own specifications — or, at the very least, as guidance.

Ideally, seeing the benefits that greater commonality will bring, they will follow the standard as far as they can, departing from it only when providing a feature is prohibitively expensive on their machine, or irrelevant to the intended use of the processor.

Of course, the "ego-trip" implementors who regrettably are still around — for example, the ones who implement what they think ought to be in the Ansi standard, rather than what actually is in it — will regard any such guidance as an affront, an attack on their professional virility.

There is not much one can do about such people except to try to get them to change to some less harmful pursuit. But I believe responsible implementors will welcome this new standard, and

appreciate the clear indications it gives of what users look for in Fortran systems.

Mention of users brings me to the third way of using the new standard — not to produce specifications as such, but as a yardstick for evaluating processors. It will be possible to use it in its entirety, as a checklist of features to look for,

To be sure, the standard is being drafted deliberately to allow someone who wishes to lay down a very tight and rigorous specification for a processor to be able to do so

or as guidance on what to ask about or test in critical areas. Some users will find it useful just as a means of reminding themselves not to overlook particular aspects which they might otherwise take for granted.

Quite a lot of people, used to a reasonable Ansi standard compiler, assume it is the Ansi standard which has ensured that they have various nice features, which in fact have been provided by a

benevolent implementor.

They can get quite surprised when they move to a different but still standard-conforming compiler whose features are very different. The new standard will make it clear just what parts the Ansi standard does not reach, and provide ways of reaching them.

So I hope users will increasingly

will provide an agreed code something which can be used as a basis for discussion and negotiation which both users and implementors (or purchasers or vendors) can accept as an independent set of criteria.

Even if the standard were only in this evaluative way, I believe it would still be worth it.

So, our aims really are modest. We are not trying to change the Ansi standard, or implementors, in concrete, to use it apparently now going under the name of the Fortran standard. We are trying to clarify the ranks of the Fortran standard, and look to suppliers for assurances, or at least information, on this point even if they do not use it directly to produce a specification. From this point of view, it could be seen as providing weapons for users against implementors — indeed, in my more militant moments I have described it in these terms!

A fairer way to look at it is that it

is looking to see how well Fortran systems measure up to the new standard, and look to suppliers for assurances, or at least information, on this point even if they do not use it directly to produce a specification. From this point of view, it could be seen as providing weapons for users against implementors — indeed, in my more militant moments I have described it in these terms!

A fairer way to look at it is that it

MERLIN

Merlin weaves some new magic

Many will have noticed that BT's brand of wizardry — Merlin — has learned the art of self-promotion. Nuala Moran talked to the man behind the marketing

MASSIVE publicity on television and in the national newspapers has made it difficult to avoid the name of Merlin, part of British Telecom's Enterprise division.

As a result of the campaign, most people are probably aware that Merlin sells business micros, since that is what it is pushing so hard in its advertisements. But they are probably wondering where it lies in fact.

Merlin is BT's marketing organisation for business terminal equipment. It is not new, it is reorganised, re-vamped, re-named business products and systems sector. This was a £500 million per year turnover distributorship handling communications equipment from all BT's traditional suppliers such as Plessey, STC and GEC.

Merlin still deals with this end of the market. What is new is the move into the office automation market which is backed by a new nationwide sales and service organisation.

The first event leading to the establishment of Merlin was the separation of BT from the Post Office in autumn 1981. According to Nick Staveley, Merlin's marketing director, it was this that first stirred the latent commercial interests of the civil servants in BT.

Merlin was not the only thing to come out of this reorganisation. The whole of BT was reorganised into four divisions, BT Inland, BT International, BT Major Systems, and BT Enterprises, of which Merlin is part.

Other subdivisions of BT Enterprises are Consumer Products, which deals with domestic telephones; Information Services, which includes Yellow Pages and Prestel; Spectrum which includes BT Gold, the electronic mail service, teleconferencing and radio paging; BT Silver, an electronic funds transfer service, and telemarketing.

"We are still making sure we stop thinking like civil servants"

The idea behind Merlin and the reorganisation of BT is to make BT an entrepreneurial and market-oriented company before it is privatised. In the same way that large hardware manufacturers are now realising they need communications expertise to be able to market integrated systems, BT Merlin needed to take an interest in computers.

Staveley said: "The intention was there for about two years to get into computers, but it was last July we started putting in resources."

"The name, BT Merlin, was something we came up with after we'd been through the performance of getting professional advice on what to call ourselves. It appeals because of Merlin the wizard, who was a problem-solver, and because of the bird of prey of the same name."

"Not the name was only the tip of the iceberg," said Staveley. "We reorganised as a business and reappraised our position in commercial terms." When this process started, the division that became Merlin was spread across numerous departments in buildings all over London.

Bringing this together took time. "The whole process took several months. We set up central offices in Howland Street in London, formed new structures and brought in new skills," explained Staveley.

Staveley claims that Merlin was already the biggest distributorship of information processors in the UK, and possibly Europe, so the departments that were united under the Merlin banner were already very rich in technology skills. The skills that were brought in were mainly in the sales and marketing area. Staveley himself is an ex-Unilever man.

The process is not yet complete. "We are still making sure we do

"We have a strict rule now that we only announce something when it's ready"

not think like civil servants," said Staveley.

Advertising Merlin is one part of the plan. "We wanted to establish our presence in a long term and strategic way. The advertising campaign has also generated a lot of enquiries," said Staveley.

And of course, Merlin took on new products. It started off with three versions of ICL systems with the Merlin badge: the M3300 communicating word processor, based on the ICL 2200 (made by ICL); the M2226 small business computer based on the ICL personal computer (originally made by Raird) and the M1100 VDU with autodialler.

Two main offices with showrooms and customer and staff training facilities were set up in Basing, West London, and Leeds with a further one planned for Birmingham next March.

Merlin also has a series of smaller offices based in existing BT buildings, providing sales and service anywhere in the UK.

A sales force of 90 was recruited to sell the office automation products. The two main centres have shopfronts and Staveley said they do attract customers who come in off the street. They also give special presentations of Merlin products.

Hotlines have been set up connected to the two centres which deal with any user problem, and Merlin offers three types of service agreement. The maintenance people came out of the existing fund of skills.

On the software front, Merlin also has its own expertise, plus experience of working with software houses. It has developed user friendly programs, Merlin Master, to give users a gentle introduction to the other programs that run on its micros.

Merlin is selling two other systems. One is the community health advanced information network (Chain), a message handling system, which runs on Acorn hardware. The uses of Chain include sending patient referrals and ordering hospital supplies. It also offers access to a large database containing information on things like use of drugs.

The other is Modulus, a micro-based office automation system for travel agents. Merlin has signed a contract worth £5 million over two years with Future Technology Systems which makes the hardware, and also a contract

STAVELEY... "Local area networks are a doddle."

WHICH COMPUTER? SHOW PREVIEW

John Kavanagh looks at the line-up for the Which Computer? Show, to be held at the National Exhibition Centre in Birmingham from January 17-20. It is open from 10am to 5pm on the first three days, and from 10am to 4.30pm on the Friday.

Micro firm The Byte Shop is an exhibition newcomer.

Big names muscle in on the market

MICROCOMPUTERS again dominate next week's Which Computer? Show. But this year there is a subtle difference in the exhibitor line-up, for there are clear signs of the big computer manufacturers muscling in on the market.

IBM, Digital Equipment Corporation and ACT - all featuring personal computers strongly this year. And Fujitsu is likely to be one of the most significant show newcomers. The giant Japanese firm has shown its ambitions in the UK IBM to launch its microcomputer range. The company is building over 40,000 machines a month and is looking for 50 UK dealers to sell a good proportion of them here.

Fujitsu's FM7 is an eight-bit colour graphics computer running the CP/M operating system. Prices

start at £800. The 16-bit FM16S is based on the Intel 8086 processor and runs CP/M-86 and MS-DOS. It also has a Zilog Z80A processor to run CP/M and a Motorola 6809 to provide colour graphics. It can have up to a megabyte of memory with 256K chips. The top model can support 32 users. A system with three workstations and a 20-megabyte disc costs £6,000.

Burroughs is not launching new equipment, but announcing what it calls computer business centres. It will open seven centres in the UK this year to handle microcomputer and minicomputer sales and to train and support small users. NCR rounds off its first year in the microcomputer business by coming into the show for the first time with its eight- and 16-bit Decision Mate V.

The company says it was surprised by demand for the product. Sales exceeded targets by so much that prices were cut by 25% after a few months because of the discounts NCR is getting on component purchases. And 300 jobs were created at NCR's Augsburg factory in West Germany.

Also on show is the Tower 1632 microcomputer, which runs the Unix operating system and supports 16 users. Among big Which Computer? Show regulars Digital Equipment gives the first public demonstration of its Rainbow 100+, launched last month. Like the earlier Rainbow 100, the machine features both eight- and 16-bit

processors. New features include 256K memory chips, plus a 10-megabyte Winchester disc and two floppy discs built in. CP/M and MS-DOS reside on the Winchester disc and the user can switch from one to the other at the touch of a key. Prices start at £4,200, including operating system.

DEC also features its Professional 350 microcomputer with a new version of the operating system, plus its All-in-one office automation software.

The biggest stand is taken by UK manufacturer ACT, showing its Apricot and Sirius microcomputers and the new Micromail electronic mail service.

The biggest company, IBM, features not only its Personal Computer but also the System 36, System 38, Displaywriter and 4300 mainframe.

Several smaller companies are in the show for the first time to launch 16-bit machines. They include Five Technology, Vector Graphic, Bromcom and Mentor. Bromcom's Superstar 16 consists of a central processor and eight-bit terminal controllers in the same unit. Users can thus run eight-bit operating systems and programs while the 16-bit processor handles shared resources, in-

cluding file and record locking. Pick operating system and the bottom of its range. It ranges up to 32 ports and 50 megabyte disc storage and has a built-in uninterruptible power supply. Prices start at £13,000. Software includes a high-level programming language called English, a database manager and some third business packages.

Other microcomputer exhibitors showing existing products are General Automation, NEC, and exhibition newcomers E Shop, Anderson Jacobson and Ajile portable computer, and Computers with the Toshiba from Japan.

Higher up the power scale minicomputer manufacturer Computer Automation is showing a new data version of its Syte, aimed at IBM network market. It is demonstrating its Sytefile vision system and the new Sytefile network. This broadband work is interesting for the way based on low-cost television components.

Perkin-Elmer is at the show with two guises. On its own stand features its recent entry into the fail-safe market with its Reliance System. The product consists of two Series 3200 32-bit minicomputers linked by new software. This is expected to be one of the fastest-growing computer markets in the next five years, with data like IBM, DEC, Olivetti and the UK's Computer Technology and

Production control packages are launched by Aset and Icoms Computers. Compact Software International is introducing colour display options on its business packages. And accounting software specialist Tabs is moving into the retail systems market with its own software and Omron cash registers. Facilities include price look-up, stock control, accounting and sales analysis.

Computer-aided design packages are offered by Interactive Graphics and Zenith Data Systems, both as microcomputer systems.

Graphix is launching a package which produces colour graphics from most popular spreadsheet modelling systems. It runs under CP/M and MS-DOS. It could be useful for visitors to Sapphire Systems' stand, where a new £49 business modelling package is on show. The Sapphire package is the "official" investment appraisal system for government departments.

On the Mittel stand the Canadian communications manufacturer is showing its new Kontakt workstation, which combines local processing with voice and data communications over the same telephone wire.

Local facilities include word processing, a diary and spreadsheet modelling. Communications features include a telephone directory with short-code dialling, plus electronic mail.

The Norwegian computer industry has taken the unusual step of booking a joint stand to promote its activities to a UK audience. Companies on show include terminal and tape drive specialist Tandberg Data, systems house Norsoft, making its first appearance in the UK, and office furniture manufacturer Hov Global.

Computer manufacturer Norsk Data is launching a private viewdata system for all its machines. It is compatible with the UK's Prestel system but has extra facilities for data entry and for broadcasting information.

Elsewhere visitors can find exhibitors ranging from printer manufacturers Newbury Data Recording, Brother and Epson to communications leaders such as Case.

With such a variety of exhibitors, two stands should be particularly busy: Microword Services is introducing some training courses, while Computer Field Maintenance is promoting its third-party maintenance services.

A new UK firm, Empirical Research (Europe) is coming into the show. The company is a specialist in the design and development of computer systems for the manufacturing industry. It is currently working on a project for a major car manufacturer to develop a new computer-aided design system.

The show is expected to be a success, with many new products being launched and a large number of new business deals being struck. It is a must-see event for anyone involved in the computer industry.

WHICH COMPUTER? SHOW PREVIEW

Tour of the show stands

■ From page 16

show to launch a 32-bit range based on the Motorola 68000 processor. The Ergo range runs from 128K to 16 megabytes of memory and from two floppy discs to 80-megabyte Winchester. Six operating systems are available: Unix, CP/M-68K, MS-DOS, BOS, Idris and Mirage.

The company is demonstrating BOS, concurrent Unix and MS-DOS, computer-aided design and financial applications on its stand.

Applications software ranging from the general to the very specific is provided by several exhibitors. Among the more esoteric packages is Boxcost from Sinclair Consultants, an estimating system for box manufacturers. It runs under CP/M.

Meanwhile Memory Computer has its stand split into a bench, a supermarket, a courtroom and a typing pool to show microcomputer packages for travel agents, shops, solicitors and word processing.

Production control packages are launched by Aset and Icoms Computers. Compact Software International is introducing colour display options on its business packages. And accounting software specialist Tabs is moving into the retail systems market with its own software and Omron cash registers.

The National Exhibition Centre attracts business and commercial users to see the latest computers, word processors and software at the Which Computer? show.

Rule No 1 — leave your cheque book behind

Phil Manchester takes a look at computer exhibitions and has some practical advice for the would-be user

YOU may be going to the Which Computer? show because you have the idea that computers will somehow solve your problems. Just write out a cheque for a couple of thousand, put the large box in the boot of your car and off you go — into the world of high technology with a gleam in your eye.

The first problem you may have already noticed is that it is not that easy. Walking around the show you will find maybe 100 or more potential computer sellers — many of whom are selling what appears to be the same piece of kit.

You may also have noticed that there are 100 other stands where they do not sell computers at all, but something called software packages.

The combination of "window dressing" and carnival barker urges you to sample the delights of everything from "program generators based on artificial intelligence" to "multi-user relational databases".

All you want is something that will record your invoices or at most keep a track of what money you have spent and what you can expect to receive in the next month.

As someone whose only contact with computers has been playing with your children's video games machine, you are possibly wondering why on earth you ever thought that computers could be of any use.

You feel like the man in the British Telecom advert who has been overwhelmed by jargon. But before you rush off to the nearest telephone to dial Freephone Merlin, take a deep breath, sit down and try and remember why you came to the show in the first place.

The computer industry has a name for your complaint — you are what is known as a first-time user.

Computer industry people adore you — with your innocent, unspoiled attitude to their wares. It makes life very easy for them because they can base their sales pitch on your lack of knowledge — just like the Merlin ad.

What you need to be going on with is a guiding hand to help you

vide you with a local dealer where you can talk things over in a more genteel atmosphere.

Secondly, grab as much literature on what you think you might be interested in — you can always throw it away when you get home. Scanning through brochures in the comfort of an armchair can reveal a lot about products which may have the potential to meet your needs.

And thirdly, spend a lot of time talking to as many people as you can.

through the worst of the storm, and by the time you have finished reading this you can go out into the rest of the show with the confidence of one who knows.

First of all, put your cheque book away. It is a bad idea to buy anything in the heat of a show. There is a sort of consumer fever that runs through shows of this kind and you may easily succumb to it.

The traders will be more than happy to follow up a short conversation on a stand with a proper sales visit to your offices, or pro-

ware and services was trivial in comparison. What is now happening is the complete reverse. Now you tend to buy the software first and worry about what machine it is going to run on afterwards.

Although it is history, it is worth dwelling on the reasons for this as it will help you understand the way the computer industry works.

When computer hardware was expensive, the basic software and the maintenance of the machine were all included in the price. In 1969 IBM decided it would charge

separately for its software. A good analogy would be that car manufacturers suddenly decided that the only petrol that would work in their cars is that which they produced themselves — a sort of bundled option. If they reversed that decision and unbundled the petrol it would open up opportunities for lots of other suppliers to sell petrol for their vehicles.

This is what happened when IBM (and the other manufacturers which followed suit) separated the various costs of computer systems. Overnight there was a massive opportunity for other suppliers to build software for IBM's customers, and the independent software industry was born.

This is why you will find many firms at the show which don't sell computers but the software to run on them. Theoretically, they have no axe to grind when it comes to hardware although in practice they will have developed expertise on a particular type of computer.

Fortunately things have been made even easier for customers nowadays as software is now much more portable than it once was.

This means that a program written to work on one computer

can be made to work on other computers. Part of the reason is the growth of what are called standard operating systems. Now a standard is usually something which has been agreed after due consideration by an international body — like the speed at which telephone lines work, for example. Most of the standards that computer industry people talk about are industry standards — or things that have become standard because everyone uses them.

There is a standard way of get-

ting a computer to talk to a printer called a Centronics interface. This is a common method of connecting computers and printers and has therefore become a standard.

For those wondering what is an operating system, it is a program that sits between the computer hardware and handles all of the complex stuff for you. It will organise data into files on discs, and remember where they are. It knows what messages to send to the printer to get it to work properly, and generally makes life easier.

You need to know about them for the same reason as you need to know whether the program you are thinking of buying will work on the computer you like the look of.

A program written to work with the CP/M operating system will not work with MS/DOS or any other operating systems, and vice-versa.

So, having selected the software package you think will do your job, you must make sure it will work with the operating system you need.

This is not always the case. Some programs do not need an operating system to work

successfully — they have all the complicated bits built in. The disadvantage of buying a program like this is if you want to expand your system at a later date.

This raises an important question that has never been answered satisfactorily by the computer industry — that of "migration".

Let's say you decide to buy a fairly standard system with 64K of memory, a couple of disc drives and a printer to do your word processing and accounts. If you had also invested in an operating system, expanding the system to include say a bit of financial planning would be reasonably straightforward — you just buy your new program, pop it into the disc drive and off you go.

If you had bought programs that did not use an operating system, it would limit your choice of products. And it would mean that the code to handle all of those complicated bits that we don't want to think too much about would be duplicated in every program you bought.

The operating system concentrates those all in one place and saves you buying them over and over again.

If, on the other hand, you are thinking in terms of getting a computer to do just one thing with no possibility of ever doing anything else, the operating system is perhaps best forgotten about.

If in doubt, pump the sales representative for answers — it is his job to help them.

One final piece of advice, remember that computers and computer systems are only tools. Certainly they are very sophisticated, multi-purpose tools, but like any other tool they are only as good as the person using them. Do not be fooled into thinking that they will make your business any more profitable or your job any easier

Computers and computer systems are only tools. Certainly they are very sophisticated, multi-purpose tools, but like any other tool they are only as good as the person using them. Do not be fooled into thinking that they will make your business any more profitable or your job any easier

Register Today for The Information Technology Planning Conference 1984 at the Royal Lancaster Hotel, London, 7 and 8 February 1984.

PLAN IT84 is the first-ever conference structured to aid directors and managers responsible for information systems to determine the effective planning and implementation of information technology.

Make sure you know the latest facts on IT, and the direction it will take

National Computing Centre, IDC Europa separately and jointly with Electrical-Electronic Press are well known for wide ranging research into developments of computer use, software and manpower training.

The sessions will draw on this and other research, to give delegates a factual basis on which to

plan their IT strategy. The speakers selected by the conference committee, have specific knowledge and expertise in the areas covered.

A key feature of the conference is that all the speakers are independent of manufacturers and supply companies. There will be no sales pitches, just objective comment and facts.

Two days will determine your future IT strategy.

PLAN IT84 provides IT management with facts and figures. It will have immediate impact on the short-term planning implications of the present trends in IT.

Attendance at the PLAN IT84 event is essential both information systems professionals and those managers and directors charged with responsibility for IT.

The conference will be structured as the programme detailed overleaf. Complete

documentation will be provided to all attendees.

The alternatives to your two-day participation in PLAN IT84—desk research, a multitude of less comprehensive, less factual meetings, a dozen or so wearisome exhibitions, or valuable time spent with equipment suppliers' representatives—cannot be as effective or as definitive as this conference.

Early registration ensures your participation

By being there, you will be party to the very latest, and most high-level, informed opinions in Europe. You will be able to assess and decide upon a plan of action to meet your company's future

requirements directly as a result of your attendance at PLAN IT84.

A forum that will produce practical results and benefits

Attend PLAN IT84, and you will be armed with the IT facts, for consideration, costing and implementation.

£365 spent on your attendance will enable you to meet your immediate needs and develop your strategic plans.

Register now for PLAN IT84—the Information Technology Planning Conference 1984—using the advance registration form below.

Day 1 Morning

Chairman's introduction
David Fairbairn, Director, NCC

Most significant trends
Mike Reidy, Senior Consultant, IDC Europa

IDC Europa, the international market research company, and Computer Weekly are combining on regular surveys of the UK data processing industry. Mike Reidy will draw on data from those surveys, as well as IDC's other market research efforts, to map the current and future course of information systems.

Systems Architecture—the options
Will Zachmann, Vice President, Corporate Research, IDC

Emerging as a key issue in systems acquisition is the processor or processors. With options available for single, tandem or multiple processors, what are the selection criteria? Allied to this are the capabilities of the operation systems for multiple processors and the separation of data handling procedures (database, dataflow, file servers).

Afternoon

Chairman's introduction
David Craver, Editor, Computer Weekly

User software—the options
Reg Boot, Group Director, Training and Software, NCC, Fons Kuipers, Consultant, IDC

While the decision between package or custom software remains, there are new factors which will influence this. There is a choice of software development tools available with

program generators and new design methodologies. What impact if any, will expert systems have in the area?

Human Interface—the options
David Hebditch, Consultant

User friendliness can mean many things, from simplicity of system usage to the ergonomic effectiveness of the equipment. What effect will multi-function work stations and graphics capabilities have on human interface? Will voice input begin to replace the keyboard?

8 February 1984

Day 2 Morning

Chairman's introduction
Peter Rowell, President, IDC

Human resource—the facts
Dr John A.G. Thomas, Publishing Director, Computer Weekly, Deputy Managing Director, Electrical-Electronic Press, John Griffith, Group Director, NCC

The most important resource. What are the facts about salaries and current trends? What are average staff turnover levels? How do you find, train and then keep your good staff? This session will also cover the role of the IT supremo and the concept of the information centre.

Communications—the options—1
Martin Healey, Professor of Microprocessor Engineering, University College, Cardiff

This session will consider the options available for users of local area networks (LAN) giving emphasis to the topologies (Star, Ring, Ethernet) and their application.

Afternoon

Chairman's introduction
David Fairbairn, Director, NCC

Communications—the options—2
Professor Martin Healey, Dr. Peter Scott, Manager Communications Division, NCC

When the network involves remote sites with long distance telephone lines interconnecting them, this is a wide area network (WAN) this session examines the factors influencing WAN systems, the manufactures, the location of people, the modern PABX, teletex and viewdata.

Communications—the standards issue
Keith Bartlett, DOTI

International standardisation organisations are making real progress towards supplier-independent standards which are of benefit to users. For IT communications the most important of these standards are for open systems interconnection (OSI) the Dept. of Trade and Industry is supporting the development and introduction of these standards through IT's 'intercept' programme.

Panel Discussion

Application of AI—the options
Brian Oakley, Director, Alvey Programme

Artificial Intelligence and expert systems are now all the rage. There are, however, very few working systems, and many question whether they have a useful application in the commercial data processing environment. Brian Oakley, who is leading the UK's research and exploitation of the next generation of computer systems, describes what is available and what is promised.

Chairman's Summary

Take two days to determine your IT strategy

Full conference details will be sent to all delegates upon registration, complete with accommodation and travel arrangements. The conference fee of £365 + £54.75 VAT includes morning coffee, full lunch and afternoon tea on both days, as well as documentation.

The Information Technology Planning Conference 1984—PLAN IT84—is backed by and utilises the resources of Computer Weekly, the National Computing Centre and IDC Europa.

PLAN IT84 Conference,
Seminars Administration,

LETTERS

Electronic mail is a two-horse race

I HAVE just caught up with your issue of December 1 and in particular two valuable items. The first is your Platform extract from the NEDO report on information technology and the second is David Ferris' article on electronic mail.

As a publisher, I am naturally encouraged by the auguries both items give for broad progress in the future towards much greater hardware compatibility as a foundation for true electronic mail.

However, I am sad to note that both items assume more or less explicitly that the intended user of electronic mail is a large organisation with dispersed branches. Accordingly, they assume that the two ends of the electronic mail will have been able to set up a cosy prior arrangement about communicating with each other.

This is a common characteristic of almost all commentary on information technology. However, from the viewpoint of a publisher, what I am concerned with is communicating with my public. In our particular instance this is quite a defined public in specific business sectors. Nevertheless, it is a much broader range of potential mail box users than the branches of any large organisation, no matter how large or

dispersed.

From our particular perspective therefore, the depressing fact about electronic mail is that, to have any universality at all, it has established and truly universal network service network and telex.

Since the type of information in ephemeral but at the same time precise numeric information (notably commodity prices), written communication in the recipient's hands is essential.

In the past five years, we have been through an infatuation with facsimile and have dipped a rightly sceptical toe in the water of Prestel. But the commercial development of facsimile has totally failed to realise the promise of a broadsheet page of the Asahi Shimbun which I first saw demonstrated in Tokyo in 1978 or five minutes in transmission.

Perhaps the reasons of user perception of electronic mail solely as a bilateral instrument, facsimile has supplanted telex. With the news that, selectively, speeds available on modern needle printing telex machines are to be doubled later

this year, it is pretty clear that now it never will.

So this still leaves us with electronic mail, in the real sense of the word, and as a next generation replacement for telex, some way into the future, which is infuriating. But as the NEDO report rightly indicates, the pressure has got to come from the users by the simple process of choosing one system (which may not necessarily be the best one) and adopting it in such volume that it becomes the standard.

In this respect, the achievements of the printing industry in standardising the media to drive typesetting equipment - and in a parallel sense the achievement of the travel trade in maximising the utility of Prestel - are the sort of examples we should be looking at.

Why should Prestel have been made a viable tool by the travel trade when the opportunity to make similar use of it by other business sectors has been completely missed? I believe the answer has simply been one of emerging consensus among leading providers of the necessary information (airline and rail timetables, etc.) and the use of that lead by potentially interactive information takers who operate at arm's length.

So how do we reproduce a system that "just grows" at the level of the international business community?

I believe we just have to start. Certainly, my researches would endorse David Ferris' conclusion that Dincin plus Telecom Gold is an excellent foundation already established in the UK and the US; but without the pressure of established user potential, the spread of this network to true worldwide connection will probably take forever.

Blind nationalism in for example, France or Japan will undoubtedly rear its head at some stage if the process of completing the internationalisation of this net is left to the network operators.

It is up to the users to vote so strongly by their use of an available network of suitable potential (ie maximum hardware compatibility) that a bandwagon of influence is set rolling.

Then neither dilatory network operators nor chauvinist governments can prevent its worldwide adoption.

T. J. TARRING
Metal Bulletin
Worcester Park
Surrey.

Cincom's Mantis is not market leader

A NUMBER of readers have pointed out an error in my recent article assessing application generator technology.

Based on information provided to me by Cincom, I asserted that: "At the mainframe end, Cincom is the clear market leader - it sold about 1,000 units over the last two years, amounting to over \$10 million in revenues."

Having investigated, I found that Cincom's Mantis is, in fact, far from being the market leader, and its shipment claims seem doubtful. I then contacted Ferris Research, a leading independent source of marketing information on the software industry, who

were able to provide the information set out in the table below.

The US is of course a portion of the world and it probably accounts for 45% of worldwide application generator revenues, and it is larger than any other market. Judged by growth of installed base and 1140 are probably worldwide market leaders certainly is not.

DAVID G. FERRIS

How best to serve the customer

Working for Customers. David Bernstein. CBI. £2.50.

I'm one of those people who start the page again if there's the slightest doubt in my mind that I haven't understood every syllable. Even so, I was able to read *Working for Customers* from beginning to end while completing the train journey from Birmingham to London.

This is one of those "I know you know it, but do you do it?" books which says nothing revolutionary yet includes much of that rare commodity, common sense, which all good management oriented books must contain.

expect to find within any comprehensive book on selling or marketing.

The first half of the book is laborious and over-stated. I began to wonder how many different ways there were to say that the customer is the most important business consideration, and that we need the customer more than he needs us.

By the time I reached the end of chapter eight, I was beginning to feel a little patronised and demotivated, but suddenly chapter nine brought the book to life with some sensible comments about the necessity to involve employees in the total business process as opposed to merely communicating with them.

"What I want to know is - how does she operate in this position?"

Some useful things are also said about the need for customer perception at all levels of company operation.

There then follows some good stuff on the pursuit of product excellence.

Alan Williams

A handbook for common Cobblers

A Cobol Handbook. Christopher Russell. Addison-Wesley of London. £5.95.

Methodical Programming in Cobol. Ray Welland. Pitman Books of London. £5.95.

It might seem strange that anyone should want to write a book about Cobol today. New features such as the Validate verb and screen handling are just coming into the language, so would it not be better to wait until these have become generally accepted?

Apparently not. This week we have two new books about Cobol, one a handbook for the common Clobber, the other a course with worked examples and exercises on structured programming in Cobol.

Methodical Programming in Cobol by Ray Welland, lecturer in computer science at University of Strathclyde in Scotland, is clear to follow, and well illustrated with worked examples and programming exercises, some of which are answered in the book with suggested solutions.

There are 26 pages of appendix summarising the language features, plus an index, which I found useful when tackling some of the

more difficult exercises.

The book begins with a history of Cobol. The next chapter on the design is used to constant progress. The reader to design a good idea, Welland says, when he claims in the preface that the student should be able to write a substantial program by the end of chapter two.

Chapters 3 and 4 give a breather from the long chapters 5 to 6, taking the reader through testing and debugging by a case study of a phone billing system.

A Cobol Handbook is a reference guide to the 74 Cobol commands widely used in its credit, the book gives examples, which help to

Philip He

PRODUCTS Instant colour hard copy for 'personals'

A LOW-COST interactive film recorder producing high-quality 35mm slides and instant photographs of personal computer graphics will be demonstrated by Polaroid (UK) at the Which Computer Show, at the National Exhibition Centre, Birmingham next week.

Called the Polaroid Palette computer image recorder, the new system is designed for use with personal and small business computers to make presentation-quality colour or black-and-white graphics hard copy on new Polaroid 35mm Autoprocess transparency films and Polaroid ER 3 1/2 x 4 1/4 inch instant print film.

The user-friendly system connects easily to the computer by a black-and-white video line and an RS232C communication line. A compact desktop computer peripheral, Palette measures 16x8x6 inches and weighs 12 pounds.

Palette can be used with the IBM Personal Computer, as well as Apple II Plus and Apple IIe computers. The image recorder can be used with several existing personal computer graphics software packages, and is supplied with diskette software to extend compatibility to currently available software.

Containing a flat-faced, medium-resolution monochrome video screen with a tri-colour filter wheel, Palette allows monochrome display computers with graphics capability to produce colour hard copy for presentation, display, record-keeping or working copies.

Polaroid (UK) (CW), Ashley Road, St Albans, Herts AL1 5PR. Tel: (0727) 59191.

puter graphics software packages, and is supplied with diskette software to extend compatibility to currently available software.

The new computer forms feeder from Infotec.

Feeder takes strain out of copying

ANYONE who has struggled to photocopy a stack of computer printouts should welcome a new computer forms feeder, says Infotec.

It is designed to allow the user to copy stacks of printout up to 450mm wide and 245mm high in an easy way. The feeder can be manually adjusted for paper width and each page is automatically re-fed, resulting in a neat stack of printout after copying.

The feeder is available on Infotec's 9030 plain paper copier range.

Infotec (CW), Housch House, 50 Salsbury Road, Hounslow, Middx TW4 6JH. Tel: 01-572 2761.

Viewdata for the Olivetti micro

BRITISH Olivetti has brought out a viewdata software package for its M20 personal computer. The new product, Olivetti, is a terminal emulator that enables the M20 to access information off Prestel and other viewdata systems. Pages can be stored locally for subsequent offline use.

Existing M20 users buying the Olivetti package will require a BT-approved modem and then, having been allocated a British Telecom user number, Prestel licence

holders can dial straight into the Prestel system.

British Olivetti (CW), 86-88 Upper Richmond Road, Putney, London SW15 2UR. Tel: 01-785 6666.

Shredders will run round the clock

FIVE new shredders claimed to be able to run round the clock have been announced by GBC. The machines not only destroy documents but also the paper clips and staples holding them together.

GBC says many shredder motors seize after 30 minutes' continuous use, so the company has concentrated its development work in this area.

In addition the cutting heads are of hardened steel. On most models the cutting head is 25% wider than the "throat", to ensure the entire document is shredded. There is

also a no-jam safety feature. If too much paper is fed in the machine puts the motor into reverse to hand back the paperwork. Sensors elsewhere switch the machine off if the shred bag is full.

GBC (CW), Doman Road, Camberley, Surrey.

Directory to 3,000 packages

Microcomputer Software Directory. Computing Publications. £40 plus £2 p.p.

WHERE can you find software sitting next to continuous beam analysis? Or a football pool prediction program next to a personal banking system?

The answer is in *Microcomputer Software Directory*, the latest leafy tome from the publishers of the industry bible, the *Computer Users Year Book*.

The new directory is the little brother of the *International Directory of Software* from the same publishers and follows a similar format.

Some 3,000 software packages are listed for every conceivable microcomputer and operating environment under application, machine type and by occupation. This last category is an indication of the importance of the so-called vertical market in the microcomputer business.

You don't just get a list of general accounting packages, you get accounting packages for estate agents, farmers, solicitors and so on.

Under each product description,

a complete technical specification, including any special requirements, the amount of memory needed and the all-important list of languages. One small criticism is that the many US-style products only have the price in dollars - presumably because of the unstable exchange between the dollar and sterling.

The only other criticism is the price - £40 plus postage. This leads to the £22.50 annually that many of the products, particularly in the business computing section, cost less than the directory itself.

The publishers are the microcomputer and operating environment under application, machine type and by occupation.

Apart from these criticisms, *Directory* is everything one would expect from the people who publish the *Computer Users Year Book* and it will doubtless join its publications on many a desktop processing department's bookshelves.

Phil Manchester

Being kind to Pascal

UCSD Pascal: A Considerate Approach. David Price. Prentice-Hall. £11.

BOOK store shelves across the nation groan under the weight of Pascal textbooks; warehouses are stacked high with them; and still they keep popping up like weeds. No publisher's list, it seems, is complete without a scattering of all his course notes have been turned into a slim (or fat) volume.

One needs a pretty good excuse these days for adding to this book mountain, especially since the early pioneering efforts were mostly rather good.

Price's excuse is that he aims to teach "a considerate approach" to programming. This means that a programmer should write programs that are easy to read, and are easy to use.

UCSD Pascal, he maintains, is a suitable vehicle for considerate programming.

His aims are laudable, but what he has produced is a bog-standard textbook. There's nothing much wrong with that except for the fact that Rodney Zaka (to name but one) has done the job already.

Price covers most of the language in a sensible order (though would prefer to see functional procedures before arrays), with a notable exception of units and modules. These are important concepts in UCSD Pascal and have influenced other languages, such as Modula. They deserve a section to themselves.

Richard Forsyth

Qume's Letterpro prints at 25 characters a second.

Word processing for small business user

THE Letterpro 20 from Qume (UK) is designed to make available professional and reliable word processing print quality to the small business and personal user.

It operates at a speed of 20 cps (average English text) and can be supplied with a range of interfaces which make it compatible with most small business and personal computers. These include Centronics parallel, RS232 serial and Qume parallel.

The printwheel and ribbons used on the unit are the same as used on Qume's range of Sprint printers. Over 100 different character printwheels are available.

Accessories for the Letterpro 20 include a low-cost letter guide, continuous forms tractor and printer cover.

Qume's other products include video display alphanumeric and graphics terminals, flexible disc drives, paper handling devices and printer supplies. The company is headquartered in San Jose, California and has facilities in the US, Puerto Rico, Taiwan, France, West Germany and England.

Qume (UK) (CW). Tel. 0734 584646.

Low-power terminal

A LOW power version of the Profort 801 hand-held terminal that will operate from a tiny battery-backed power supply unit built into the 13 amp mains plug has been announced by Data Beta.

The Profort 801L is designed for use to applications in remote areas where a mains power supply is not available. The unit will operate for up to five hours after charging, which occurs automatically when the unit is powered from the mains.

The Profort 801, unlike many hand-held terminals, can replace full-size VDUs. It generates the full ASCII character set, has a display memory of 128 lines of 32 characters (2,048 characters) and will communicate at any standard rate between 50 and 9,600 baud.

The liquid crystal display accommodates two lines of 16 characters and the entire contents of the display memory can be reviewed using the up and down

The Profort 801L from Data Beta.

scroll keys. A backlight can be switched on for low light situations.

The Profort 801 costs £299 (one-off) and the 801L version is priced at £399, which includes power supply and batteries.

Data Beta (CW), 23a Buckingham Avenue, Slough, Berkshire SL1 4QA. Tel. (0753) 75933/4.

The total network integration.

NETIX Part of our X-WIRE product range

Integration. Communication. Productivity. Your investments in data processing must be measured against these three basic criteria. It makes no difference whether you are concerned with office automation, software development, data bank management or a combination of them.

NETIX provides total and automatic integration. NETIX is a network operating system that provides real total integration of processor and storage capacity so that the user has at his disposal virtually one single machine. NETIX, moreover, works automatically. Your computers and external memories can now access to all the peripherals, so needless duplication is eliminated.

NETIX optimizes your hardware investments.

NETIX provides better communication. All the users of all the machines can now communicate with each other and with all the apparatus more easily without being worried about protocols. Because, thanks to NETIX, you have virtually only one single machine. NETIX does automatically what one would have to do oneself with an ordinary installation.

NETIX provides increased productivity. Thanks to the total and automatic integration and the better communication, NETIX increased the productivity of UNIX and of the local area network.

NETIX is completely compatible with UNIX. Thanks to this complete compatibility, the users need no special training. NETIX is completely transparent. All UNIX applications, moreover, remain unchanged.

NETIX safeguards your software investments.

Cunard International Hotel, London
January 31 - February 2, 1984
10.00 - 17.30 (closing 16.00 on the last day)

Especially for the computer professional

Peripherals 84 is the central event in the computer peripherals industry's calendar, because it offers the specialist visitor like you, an opportunity to see the very latest equipment on offer from the manufacturers.

Only at a show dedicated to peripheral equipment including terminals, printers, disk drives and plotters, could you see the wide range of cost effective equipment available today to the professional computer buyer.

The show's professionalism is guaranteed by the joint sponsorship of the industry's own trade magazine, Systems International, and the Peripherals Suppliers Association. A simultaneous programme of seminars is held by the Peripherals Suppliers Association in recognition of the central place this prestigious exhibition holds in the peripheral industry. For full information of the seminar programme is telephone Mrs Helen Gibbons on 0763 71209.

Both the show and the seminars are held at the Cunard International Hotel, Hammersmith, itself close to the centre of London and within easy reach of Heathrow Airport.

Peripherals 84 is organised by Reed Exhibitions which also stages other major computer-related exhibitions including Computer Software and the Computer Trade Show.

So if you're looking for the peripheral market make sure you visit Peripherals 84 and discuss your needs with specialist suppliers. It's the central event for peripherals.

Portable pictures package

Users can draw their own pictures and diagrams on a portable computer screen through TeleVideo's TeleDraw package, available in the UK from Enclotel Systems at £180.

TeleDraw has been designed for TeleVideo 8- and 16-bit personal computer systems and uses the new SuperMouse pointing device. It operates with Digital Research's CP/M and CP/M-86 operating systems with GKS systems extension.

Micro capable of using TeleDraw include TelePorter, the new multi-user portable which can be used both at home and as a plug-in part of the office network.

Users may soon have their portable graphics capabilities extended further through an agreement between TeleVideo and Thermal Research. This allows Thermal both to enhance and market TeleDraw.

Paul Langhurst, director of Thermal Graphics Product Group, comments: "We are looking for visual communication that will define the standard for the industry."

Enclotel Systems (CW), 7 Imperial Way, Croydon Airport Industrial Estate, Croydon, Surrey CR9 4RR. Telephone: 01-686 9678.

Jet-age printing launch

EXTENDING its ink jet printing range, Lawtons announces the UK and Eire launch of the Lawco 2000 alphanumeric small character non-impact ink jet printer. Programmable via a touch sensitive keyboard, the system is designed for high speed product and package marking, coding and dating, printing at up to 1,000 characters per second and operating at fast linear speeds of up to two metres per second.

The Lawco 2000 is said to produce high quality printing on most materials including metal, glass, film, plastic, paper, and board, and excellent legibility on all types of concave, convex, irregular and textured surfaces.

The system can be incorporated into automatic conveyor line installations and connected to standard computer equipment through its built-in universal interface: V24 - RS232 or 20 mA current loop 300 to 19,200 baud.

Water and solvent based inks are available and red, blue and black colours can be supplied.

Lawtons (CW), Packaging Division, 60 Vauxhall Road, Liverpool L69 3AU. Tel. 051-227 1212.

The P2000C portable from Philips.

Philips adds three to P2000 range

PHILIPS has introduced three new models of portable computers, the latest addition to its P2000 range.

The P2000C portable is a full function, all-in-one business computer.

All models contain a fast Z80A CPU, 64K RAM (expandable with a 256K memory board) and a RAM disc, separate 32K RAM video, 9in monitor and two 5.25in floppy disc drives.

Depending on the model selected, up to 640 Kbytes of storage per disc is possible (over 1.2 million characters). A separate, attractive keyboard can be snapped on to the computer when not in use or for moving the machine. An attachable carrying strap allows easy transport.

The ergonomic P2000C offers the power and capabilities of larger, heavier and more expensive desktop personal computers, says Philips. The video gives a full 24x80 character display and allows high resolution graphics display (512x252 pixels). A SASI interface is standard on all models, allowing a hard disc or other mass storage device to be attached.

Also standard are serial in-

terfaces for asynchronous/synchronous communication and printer support as well as a connector to attach a large monitor.

CP/M, the industry standard operating system, is included with every P2000C.

The keyboard has a low profile and includes a 57-key main keyboard as well as separate numeric and function key pads. The keyboard will be available in English and major European languages.

The entry model P2010 has two 160K floppy disc drives. This unit is designed to be a personal computer for company managers and executives as well as self-employed professionals.

The model P2012 is the top of the line machine sporting 640K per disc storage capacity.

In addition to running CP/M, the P-System will also be available. This provides a powerful operating system environment.

Both models are bundled with software which will include word processing and spreadsheet programs among others.

Philips Austria (CW), Business Unit Personal Computers, Triesenstrasse 64, A-1100 Vienna, Austria.

Programming in 3-D

COUNTING House Computer Systems has announced the release of G3NC, a powerful extension to its graphical numerical control tape preparation system, GNC.

Fully compatible with GNC, G3NC shares the same command structure and retains the 2D KCurve profile as a drive surface. The additional features include the definition of 3D surfaces by sweeping or spinning the 2D profile, the automatic clearance of enclosed pockets, the specification of maximum and minimum machining levels, the offsetting of part surfaces for the sinking and automatic machining to specified arc tolerance.

The new system offers two levels of use depending on the

complexity of the part-surface geometry to be used. For simpler surfaces such as cones, cylinders, spheres or planes, the Root facilities offer a simple language definition, plus the ability to visualise them. This is done either by selectively drawing feature lines or with a projection of a 2D part profile on to the surface.

The milling module provides the ability to machine at a specific height or related to a selected surface by means of the cursor or joystick and profiling is around a 2D pocket wall or using a metal clearance algorithm.

Counting House Computer Systems (CW), Fortham House, Fortham St Martin, Suffolk. Tel. (0284) 68921.

Bob-3 tracks troubles

BOB-3, a V24 terminal interface activity tester from Trend Communications, is a lightweight, self-contained test set. For connection between Data Control Equipment (DCE) and Data Terminal Equipment (DTE), it enables the user to locate sources of trouble between the DCE and DTE and to monitor V24 signals.

A feature of the Bob-3 is its Tri-state LEDs. These monitor line activity, mark or space, and voltage transitions by means of red, green or off display. If the voltage is negative the light displays green, with a positive voltage it shows red and when there is no voltage, no light is emitted.

Battery powered, the Bob-3 contains 24 dual-in-line switches which allow any of the interface signals to be interrogated. Male and female connectors, each with 25 pins connect the Bob-3 to the

System tells ops how the tape will perform

A MICROPROCESSOR-based system for maintaining and evaluating the condition of computer tapes used on 800, 1600 and 6250 bpi drives, has been announced by Dennison Corp.

While previous systems have used microprocessors to control clean and test functions, the new MLT-600 extends the processor's role to interpret test results and generate detailed management records.

This means that when untrained operators handle tape maintenance functions they no longer have to make value judgments about a tape's reliability. The system tells them exactly how the tape will perform with results correlated to the error-tolerances of the DP centre's particular drives, says Dennison.

It also means management no longer has to guess about the overall condition of the tape library. The system generates cumulative reports detailing the condition of the entire library as well as reports that verify operator activity.

The MLT-600 system cleans, tests, evaluates, rewinds and removes static charge from a reel of tape in 3.4 minutes.

Users can specify any combination of procedures including clean

only, clean/test, archival rewind or a non-destructive optical evaluation that checks live data tapes for certain kinds of physical damage without destroying stored information.

In the test mode, the MLT-600 analyses the tape electronically for magnetic defects by emulating the writing and reading techniques of a user's tape drive.

For 6,250 bpi tapes, the MLT-600 reports 1 track, 2 track and 3

track errors, permanent write errors (PWEs), and light transmission errors (LTEs).

For 1600 bpi tapes, it reports 1 track, 2 tracks and edge condition errors as well as PWEs and LTEs.

For 800 bpi tapes, it counts write deck, edge condition and LTE errors.

Dennison KYBE Corporation (CW), 82 Calvary Street, Waltham, MA 02254. Telephone: (800) 225-8715.

The MLT-600 tape cleaner/tester from Dennison.

Genie system for UK

THE Genie 5/5 is a new Winchester hard disc drive system incorporating an exchangeable five Mylic Winchester cartridge that will be distributed in the UK by Advanced Peripheral Products under an agreement with Genie Computer Corp.

The Genie 5/5 is one of a range of disc drive systems for popular microcomputers.

Advanced Peripheral Products (CW), Enterprise House, Central Way, North Feltham Trading Estate, Middlesex TW14 0RX. Tel: 01-844 1200.

Quick identification

AN electronic access control system has been developed by Eureka Systems, using small tags which automatically identify themselves to sensors.

Malcolm Barker, Eureka's managing director, says Eureka can do everything electronically that a conventional access control system does, but without any effort on the part of the user.

"The beauty of Eureka is its convenience," he claims. "The tag can be carried around all day in a pocket or bag, without ever being handled by its owner."

"People carrying amfufs of equipment or files, or even push-

ing trolleys, can breeze through without any delay and without having to hunt for their card".

The system employs a small 50g sized plastic tag, powered by a non-rechargeable battery, with a life of seven to ten years, which has the ability to memorise its own exclusive identity code and transmit this information on demand.

The code, which cannot be duplicated, will be detected and verified by a sensor up to a range of three metres.

Eureka Systems (CW), Dorney House, Upton Road, Slough SL1 2AD. Tel: (0753) 821755.

Choice of output media

A NEW version of the Tasmir word processing package for Digital Equipment computers has been produced by S-Com.

New features include Ascii output and input files, and a choice of output media and delayed printing.

The package runs under DEC's RSX, RSTS, VMS, RT-11 and POS operating systems. It costs £799 plus VAT.

S-Com Computer Systems Engineers (CW), Tower House, High Street, Aylesbury, Bucks HP20 1SQ. Tel: (0296) 32023.

The microterminal from Burr Brown with full travel keys.

Full travel keyboards

BURR-BROWN has announced a range of micro terminals based on the TM76 and TM77 series, but they have keyboards with full travel keys over the membrane keys used previously. Identified by a suffix K after the type number, the new micro terminals are identical in performance and specifications to the present units except that the case is thicker (1.3 inches).

The micro terminals are suited to applications where faster data entry is required or where the keyboard is expected to receive heavy use. Burr-Brown expects the new keys to offer substantially longer life.

Both the TM76K and 77K have large keys that can be used by

operators wearing protective gloves.

The TM76K is a waterproof terminal designed for use in industrial environments including the factory floor or, for example, the control cabin of mobile machinery such as a crane. The unit comprises a 29-key keypad (numeric key set plus eight programmable function keys and control keys), a 12-character alphanumeric display, three indicators which show the status of the units, two I/O ports and a 36-character buffer memory.

Burr-Brown International (CW), Cassiobury House, 11-19 Stanlow Road, Watford, Herts WD1 1EA. Tel. (0923) 35837.

POLICE

What our policemen expect a computer system to do

The Durham force has specified 98% reliability for its newly-installed machines . . . Nuala Moran reports

FROM next month the 13,500-strong Durham police force will be computerised. A non-stop system, installed last November at the Ayley headquarters, is expected to be fully operational by the end of February.

Durham police specified 98% reliability for the system. "In practice, to reach 98% reliability you must be even more efficient than that," said Peter Howson, managing director of CAP (Northern) which installed the turnkey system at a cost of £550,000.

This level of reliability is achieved with two Perkin-Elmer Series 3200 minis with a re-configuration monitor which runs as a continuous task under the OS/32 operating system. It runs on both processors, allowing each to monitor the other.

If there is any kind of failure the programs environment and the peripherals necessary to keep the operation going is passed over to the other processor.

To the Durham system, the master mini runs the applications and the slave is used for training and systems development. Either machine can perform either function. This is an advantage over other fail-safe systems because the back-up computer actually does something useful, rather than being a hot slave waiting to start working if something goes wrong with the master.

To a demonstration of the system, one processor took over

from the other within a minute. It took 10 seconds to register the fault and 30 seconds to transfer all functions. There is a switch to change over for regular machine maintenance.

Superintendent Eddie Marchant is responsible for the computerisation project. He explained that this was the first use of computers by the Durham police apart from some housekeeping, such as payroll, which is done on Durham County Council equipment.

"In June 1979, we started a feasibility study to identify what a police computer should do. The most important point in the terms of reference is to determine how it could help to improve the operational efficiency of police officers. There was certainly no presumption that we needed a computer system," said Superintendent Marchant.

A team went round the force and asked users what they wanted a computer system to do. "All this was done hearing in mind Home Office advice and guidelines," said Marchant.

"Because we were looking at operational needs we gave priority ratings to certain functions in terms of their contribution to operations. For this reason, message-switching seemed an obvious place to begin our computerisation. This will enable us to replace the present teleprinters," the superintendent continued.

"And this is why we specified

the 98% reliability because such a system has to work 24 hours per day, seven days per week."

The message-switching system links 12 police stations in the area. Each station has at least one Lynwood VDU and Mannesmann printer. There are 38 VDUs and 23 printers altogether.

Superintendent Marchant foresees the main advantages of message-switching as speed in preparation of messages, and the fact that there are fixed formats for the transmission of certain kinds of information so that data will not be omitted by mistake, slowing the work of the police.

For example, when reporting a stolen car, all the information required is listed in a standard form which appears on the screen, and the message cannot be sent until all the information is supplied.

All information fed into the VDUs will be kept for a certain length of time for use by local stations. In the future, a cross reference system will be developed to organise the stored information.

Emergency calls will still go via the telephone network and the system will not be used for command and control of the force.

The second function of the system is the scratch pad. This is an information file which includes details of all operational procedures. The information is held under 67 headings which were devised after studying the manual files.

The idea is to get policemen back on the streets.

Marchant said: "We are interested in quality of information as we spent lots of time drawing up the 67 file headings and organising the data that will go under them."

Information includes lists of keyholders, duty chemists, midwives, doctors, standard procedures and immediate action for

dealing with emergencies.

If the information file is being used when someone is trying to transmit a message from another police station, a bell rings to alert the user. The system will save looking things up in manual files, a time-consuming operation.

The third function of the

system, the link to the Police National Computer (PNC) in Hendon works by pressing one key. This turns the Durham VDU into a PNC terminal actually running on a different computer.

According to Howson this was one of the most difficult things about designing the whole system. "A lot of work went into making the switch into the PNC easy which is often the case with things which make life simple," he said.

The Durham police headquarters has extensive training facilities and the first course to teach policemen how to use the system took place at the beginning of November.

The aim is that everyone in the force will eventually be trained how to use the system. Durham's computer team has also been involved in appreciation courses particularly aimed at more senior officers.

All this may seem a long way from Dixie of Dock Green or even Juliet Bravo, but the idea is that by improving operational efficiency, it will be possible to get policemen back on the streets or even standing in the steps of Dock Green police station saying: "Evening!"

The second phase of the computerisation will start next month as soon as the first phase is running. A contract worth £150,000 has been signed with CAP to develop a criminal names index of convicted criminals in the Durham area.

TORCH COMPUTERS

Lighting the way ahead.

Torch Computers Limited, 3rd Department, 41, Leck Road, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 8

The Dextralog FS2 monitoring system aimed at improving shop floor productivity.

Machine monitoring system

THE Dextralog FS2 multi-machine monitoring system introduced last year has been developed to provide greater efficiency in a number of manufacturing environments. The monitoring system is aimed at improving shop floor productivity by providing analysed information on machine performance for closer plant-wide control and long-term planning.

Data is presented in an easily usable format and users can construct their own reports enabling changes of emphasis in the selection of data produced. Different facts of the manufacturing process can therefore be monitored, exceptions highlighted and then acted upon.

The FS2 is a microprocessor controlled system which is connected to a video terminal with detachable alphanumeric keyboard. It can be user selected from the database and may include information on production, scrap, balance against run, down time - its frequency, causes and amount of time lost.

Dextralog (CW), Hillside, Whitebirk Estate, Blackburn BB1 5SN. Tel: (0254) 662244.

Micro designed for hostile environments

A NEW type of rugged computer, designed to work in hot and dusty countries where voltages are often poorly regulated, has been launched by Siron Computer Systems.

The company manufactures a wide range of microcomputers under the name of Midas. The new computer, the Midas 2D/TE, has been designed to cope with the environment associated with many Third World and under-developed countries, particularly those with a high ambient temperature, large amounts of fine dust, and widely fluctuating, and often non-existent mains supplies.

To combat high temperatures, the Midas 2D/TE has two internal high capacity cooling fans, one for the main computer module, the other for the floppy disc drive.

Large, and conservatively rated, circuit boards and power supply components are evenly distributed

throughout the unit to keep them dissipation to a minimum.

To eliminate dust, two large dust filters are mounted externally. These filters are easily removed for cleaning or replacement.

Developed in machines in Nepal and Gambia, the Midas 2D/TE has been designed so that if the mains voltage and frequency fluctuates beyond certain limits, or the voltage fails, the machine is instantly switched over to two standby standard car or truck batteries.

The power supply is equipped with massive smoothing capacitors, generous transformer sizes, and two-stage regulation that provides stable DC voltages over a wide range of input voltages.

Siron Computer Systems (CW), Unit 14, 29 Willow Lane, Mitcham, Surrey CR4 4NA. Tel: 01-640 6931.

The Memory 7400.

Memory goes into business

THE Memory 7400 Series is a range of business computers. Instead of sharing a single processor, the 7400 has individual processors for each visual display unit, enabling each unit to run any application on its own screen without affecting other users. Printers can be connected directly to a visual display unit for sole use, or to a central processor for shared use.

Each terminal, with its own built-in 64Kbyte processor, has an ergonomically designed screen, a slim query keyboard and a numeric keypad. The use of individual processors allows expansion of the 7400 system without any noticeable loss of response time.

The 7400 processor controls a range of hard and floppy drives which allows complete flexibility in an overall system. It presents the system supports file workstations, but an expansion box will soon be introduced to allow the central processor to support up to eight workstations with a number of printers.

Disc capacity will also be able to be upgraded to 2x70 megabytes, with a 30 megabyte tape streamer back-up. Multiplexor boards will also be available early in 1984, each capable of supporting a maximum of four devices. This gives 7400 users the opportunity to work with Memory's single user 8000 Series micros.

The Series 7400 is marketed exclusively in the UK by Memory Computer Systems through a nationwide network of dealers. They have been chosen for their ability to provide a high level of support, at a local level, for both hardware and software.

Memory Computer Systems (CW), Britannia House, 960 High Road, London N12 9RY. Tel: 01-446 1441.

Low-cost draughting package

GRAPHICS Research based in the Netherlands has developed a low-cost two-dimensional interactive draughting package called Grid, designed primarily for small systems.

It is user friendly and requires the minimum of training. Grid has simple draughting routines and a list of functions that include colour fill and text display that give current cursor co-ordinates.

It can be enhanced with application modules tailored to the user's exact requirements.

Grid is targeted at architects, cartographers, engineers or anyone who wants to draw by computer. It is currently available under CP/M, CPM86, MSDOS, RSX11 and can be ordered in Basic, Fortran or Pascal.

Graphics Research is looking for distributors interested in marketing this software.

Graphics Research (CW), Zonnebaan 18, 3603 CB Maarssenbroek, The Netherlands. Tel: 010-31-30-44-53-52.

Muirhead's 6800 automatic business document fax transceiver.

Fax skips the spaces

MUIRHEAD has announced an important addition to its range of business document facsimile machines.

The new desk-top group 2 transceiver, known as the Mufax 6800 and costing under £2,000, comes with approval by British Telecom. It incorporates a special "skip white space" facility which enables the facsimile scanner to pass over areas of blank white space on an A4 page, electronically reading only the area taken up by text, drawings or diagrams.

Muirhead Office Systems (CW), 34 Croydon Road, Beckenham, Kent BR3 4BE. Tel: 01-450 4888.

SOFTWARE MONTH

Pick or Unix: which is better?

Software Month predicts success for both systems

AS the new 16 and 32-bit microprocessors bring the age of the microcomputer to maturity, and simultaneously break down the traditional distinctions between micro, mini and mainframe computing, two operating systems above all others are being tipped for success in this coming era of metropolitan computing: Pick and Unix.

By now, there can be nobody who has not heard the historical derivation of Unix, the operating system that evolved in and for the research environment, and now reigns an undisputed leader in nearly all academic, R&D, and laboratory installations.

Perhaps fewer readers, however, will know the history of Pick, the less well-known of these two systems. Pick evolved during the years of US involvement in Vietnam; an operating system that could be used by troops under war time conditions. Callous though it may sound, one design criterion must therefore be simplicity, for there may be a high turnover of staff with little time for training.

This conceptual difference in theory has led to the fundamental difference in practice between the two systems. Unix was designed by and for academics, and thus can and does incorporate some complicated command structures. Pick, on the other hand, was designed for simplicity with a high degree of transparency. (Indeed, it could almost be compared more to the Basic operating systems of the home computers, than in the traditional desktop operating systems.)

Of course, other factors have begun to play their part over the years. While Unix was developed by a corporation and has never had the "personal" association of a

product like, say Kildall's CP/M, Pick was developed by Dr Richard Pick and remains very closely associated with him. It is because Pick has stayed intimately involved with his product that it has never become as widely known or used as Unix.

There are a number of companies that have chosen to specialise in this latter product, claiming it to be a better product than Unix, especially where large numbers of users are involved.

However, commercial success for any operating system depends not simply on itself, but on the availability of application packages for the end user. It is here that Unix is likely to succeed over Pick, in volume sales at least, if only because there are more Unix developers writing for more Unix machines than there are Pick specialists.

As Perkin-Elmer's UK marketing manager Fred Mascarenhas has remarked: "The number of third party packages available under Unix is increasing exponentially. It allows total software compatibility. It allows the writing of software which will run on more than one manufacturer's range of hardware. It allows software to be written with no ties."

"A few years ago most intelligent users decided to standardise on one manufacturer's equipment, and they often chose IBM or ICL or DEC."

"Today the same intelligent users are standardising not on hardware, but on software - and that software is Unix. No longer does the user need to worry about re-writing, or converting software when the hardware runs out of steam. He simply buys the most cost-effective hardware on the

market at the time."

But according to a US survey, there are currently more Pick machines, around 14,000, worldwide than Unix processors.

"There will eventually be more Unix engines," says EDP managing director Richard Jowitt, "but they won't all be compatible. The different implementations are just that - object code isn't always portable, whereas with Pick it is. So although the number of Unix systems will appear larger, it must be remembered that there will still be more compatible Pick machines than Unix."

"Unix," says Fred Mascarenhas, "is a timesharing operating system. It provides a congenial environment in which to program and operate the computer system. It has a large number of software tools which, like the tools from a good toolbox, can be combined and used to perform complex and different functions."

"The filing system adopted under Unix is inherently simple: the hierarchical method. Unix treats everything as a stream of bytes, and therefore files, devices, even communications between processes, are totally compatible."

"Unix allows the user to initiate totally asynchronous processes while maintaining full flow control between these processes. In addition, it sports a very powerful feature known as the shell through which, with a single command, the user can initiate a stream of complex tasks."

But the Unix application market is complicated by the large number of both Unix versions and Unix derivatives (Xenix, from Microsoft - the MS-DOS company - is perhaps the best known third party attempt at making the pro-

"Unix and Pick? I thought that was some sort of comedy double-act!"

duct more user-friendly than its original).

Root Computers, a Unix specialist company, explains the situation thus:

"The first version of Unix to become available commercially

was the seventh version of Unix developed by Bell Labs, and was therefore launched in 1978 as Unix Version 7. Although this is still available, companies marketing it had to make substantial changes to the original and write a great deal

of additional code before it could be sold commercially.

"Version 7 was superseded in early 1982 by the release of Unix System III. This was Bell Labs' ■ Continued on page 28

The pick of the packages

Ace Microsystems Ltd

Challenger House
125 Gunnersbury Lane
London
W3 8LH

Software package: Lex
Unix

Lex is a full-function word processor that incorporates text editing, a built-in mail-merge facility, and a records processing capability.

Altos Computer Systems Ltd

Manhattan House
High Street
Crowthorne
Berkshire

Software package: Over 100 third party Xenix packages alone
No of users: 400 plus in UK
Unix

Pick
Altos is a computer manufacturer that can provide a range of more than 100 third party software packages. Both Pick and Unix (Xenix) are supported on the 536/10-40 systems. The Altos Pick distributor is Unison Technology Ltd, Bartowbridge, Yorks.

Applied Micros Limited

The Genesis Centre
Birchwood Science Park
Warrington

Software: to order
No of users: 3
Pick
This is an investment management

specialises in providing a high-level of service to micro purchasers. One of the largest divisions is the Unix-based Systems Development Group, which provides custom built Unix software for client applications.

Consultants (Computer and Financial) plc

2-12 Wilson Street
London
EC2M 2TE

Software package: Ships
No of users: 20
Pick

Ships is a full information processing system designed to cover the needs of the shipbroker. It includes sale and purchase, chartering, and comprehensive links to the telex network.

Software package: Carofin
No of users: 3
Pick

This is an online trading package that covers all markets and all types of commodity.

Software package: Fiscal
No of users: 21
Pick

Fiscal is a full accounting, investment management and information system for stockbrokers.

Software package: Tims
No of users: 3
Pick

This is an investment management

system to cater for the management of either the private client, pension, or other funds investment portfolio.

Computer Factors (Sales) Ltd

Marshall House
Manor Road
Coventry

CV1 2GF
Software package: Mailbrain II
Pick

Mailbrain, running on Pick-based microcomputers, is a package for mail order processing companies and large list and subscription handlers (such as publishers, charities, and so on), and the marketing departments of large companies.

Computerplan Software Services Ltd

65 Staines Rd
Hounslow
Middlesex

Software package: Stock control
No of users: 400
Unix

This is the multi-location stock control module of an order processing system. It may be linked with order entry, purchasing, invoicing and sales ledger. The language is available on Altos, Zilog, Fortune, and Plexus computers.

Software package: Payroll
No of users: 100
Unix

This is a payroll system complete

with SSP facilities. The language is Level II Cobol, and the system is available on Altos, Zilog, Fortune, and Plexus computers.

Software package: Sales invoicing/sales analysis
No of users: 400
Unix

This is the invoicing/sales analysis

module of an integrated order processing system. It may be linked with sales order entry, purchasing, stock control and sales ledger. The language is Level II Cobol, and the system is available on Altos, Zilog, Fortune, and Plexus computers.

Software package: Purchase order planning

No of Users: 400
Unix

This is the purchasing module of an integrated order processing system. It may be linked with order entry, invoicing, stock control and sales ledger. The language is Level II Cobol, and the

■ Continued on page 28

ONLY ONE SUPERMICRO KNOWS 13 LANGUAGES.

The keys to your success, now and for the future, are flexible systems with a breadth of languages that protect your software investments. These languages save you time, minimize effort, and give you a powerful tool, particularly useful for the many end users looking at updating their hardware.

Considering all this, consider the Pixel 80. Not only do we have a catalog of programming languages and developmental aids that is unmatched in the 68000 Unix world, we have a wide range of data base management systems, word processors, spread sheets, and ready-made applications packages.

HARDWARE POWER TO MATCH SOFTWARE POWER.

A few hard facts:

1. The Pixel 80 has a multi-processor architecture. A 10 MHz Motorola 68000 runs the operating system and user programs. It can fetch memory as fast as a 68000 can go.

2. With up to 6 million bytes of no-wait-state RAM combined with hardware memory mapping, the Pixel 80 makes possible applications that could never before be run on a microcomputer.

3. Winchester and floppy disk drives combined with cartridge tape back-up and software file management techniques allow for flexible growth and expansion.

ALL THIS AND IT'S EASY TO USE.

Our Unix operating system includes Berkeley, PWB, and Pixel enhancements. It's powerful, portable and very, very friendly.

LOOK TO THE FUTURE.

Something to consider: while the Pixel 80 almost matches the VAX-780 in raw computing power, it is less than a third its price. Yet as attractive

as our price/performance ratio is, we maintain that the ultimate reasons for considering us are our unmatched range of languages and great software support. Because in the future the ones still standing will be the ones who know the most, and speak the best. With Pixel 80 you've already got a good jump on the future.

For more information call 0925 828181 or write to Pixel Computer (UK) Ltd, The Genesis Centre, Garrett Field, Science Park South, Birchwood, Warrington, Cheshire WA3 7BH.

PIXEL COMPUTER

LEVEL II COBOL is a trademark of Micro Focus, Inc. RM/COBOL is a trademark of Ryan McFarland Corporation. SIBOL is a trademark of Software International Ltd. TeleSoft Ada is a trademark of TeleSoft. UNIX is a trademark and service mark of Bell Laboratories. TOMBASIC is a trademark of TCM Software.

KNOWLEDGE IS POWER.

Pick or Unix: how does one choose?

From page 27

first attempt to provide Unix in a commercial form. Unix System III combined many of the features of Version 7 with another Bell Labs development called the "Programmers' Workbench".

"However, Unix System III was still unsuitable for direct commercial sale, and companies such as Root began to put it in a form in which it could be sold to computer manufacturers."

Root, incidentally, uses a version of Unix called UniPlus+ developed by UniSoft Corporation in California, for which Root is the UK representative. UniPlus+ is like many of the Unix derivatives, retaining compatibility with the standard AT&T Unix.

"There is a shortage of reliable business software available under Unix. However, a large number of software houses have realised the potential for Unix and much effort is being put in to increase the supply."

"Unix is termed a portable operating system. In other words it is relatively easy to move Unix to new hardware. Unix also offers the advantage of being able to move applications software between Unix machines fairly easily."

"Software running on one machine can usually be moved to a completely different machine without any major problems. This means that when a company is changing or updating its computer systems, all the software used (including application software and data) can be transferred to the new computer."

"If the software is written in C (the language of Unix), then it is

straightforward to move on to new machines since all Unix machines automatically have a C compiler. The portability of software written in languages other than C depends on the availability of compilers for the relevant languages on the new hardware. In this way, Unix users achieve hardware independence for their application software."

"Unix can also be run on more types of computer than can any other operating system in the history of computers. Every major manufacturer of computers has either launched or announced one or more computers capable of running Unix (from 16-bit micros to mainframes)."

"Unix can be run on more types of computer than can any other operating system in the history of computers."

This latter point is enthusiastically endorsed by Nick Lovett-Turner of Precimann Software (a Unix-specialist software company). "Some 100-plus hardware companies have machines running Unix," he explained, "and all the major manufacturers have either declared their support for Unix, or will be doing so during 1984."

Answering the criticism that Unix is unfriendly, Lovett-Turner went on to comment: "What critics really mean is that it is not trivial. To harness its power requires expertise and experience. This is a great asset since it ensures a maturity and quality in Unix application software that the end user

needs and should demand." This in turn was echoed by Mascarenhas: "The reason why so many packages are being written under Unix is because of this ease of development and the standard that Unix sets. It was this type of reasoning that convinced BIS Software, one of the world's largest commercial banking systems houses, to order 10 systems from Perkin Elmer to run the Bond-Aid dealing package for installation among the big name banks," he says.

"The key to the Pick system," says IBM, "is a powerful relational database." According to General Automation: "Pick, a strong competitor for the 16-bit operating system market, is a multi-user database management oriented system."

But according to Adrian Green, a marketing support manager for Computer Automation, who, incidentally, has no plans to provide Pick, it is "a real time data processing system rather than a generalised operating system."

Pick competition

JANUARY 27 is the closing date for entries in the Richard Pick Award competition. A first prize of £1,500, a second prize of £750, and £150 for the next best five entries will be awarded for original essays of 2-4,000 words which describe in layman's terms the benefits of the Pick operating system to the end-user. Full details in the November 24, 1983 issue on page 25, or write to the Editor, Computer Weekly (address on page 2).

MASCARENHAS... Unix packages are common because of the ease of development.

The pick of the packages

From page 27

system is available on Altos, Zilog, Fortune and Plexus computers. Software package: Computerplan general ledger. No of users: 1,000. Unix.

This is the general ledger for business accounting, incorporating analysis ledgers and financial reporting. It may be linked with sales and purchase ledgers and order processing. The language is Level II Cobol, and the system is available on Altos, Zilog, Fortune and Plexus computers. Software package: Sales order entry. No of users: 400. Unix.

This is the sales order entry module of an integrated order processing system. It may be linked with invoicing, purchasing, stock control and sales ledger. The language is Level II Cobol, and the system is available on Altos, Zilog, Fortune and Plexus computers. Software package: Computerplan sales ledger. No of users: 700. Unix.

This is an open item and brought forward sales ledger for business accounting. It may be linked with order processing and general ledger. The language is Level II Cobol, and the system is available on Altos, Zilog, Fortune and Plexus computers. Software package: Computerplan purchase ledger. No of users: 700. Unix.

This is a purchase ledger for business accounting, integrated to the general ledger, and purchase invoice register. The language is Level II Cobol, and the system is available on Altos, Zilog, Fortune and Plexus computers. Software package: Computerplan purchase ledger. No of users: 700. Unix.

This is a multi-user business system that is multi-company, and incorporates sales, purchase, nominal ledgers, order processing and invoicing, stock control, manage-

EDP Systems

1 Tipton Park Road
Sheffield S10
Software package: Interface
No of users: 140
Pick

EDP has been involved in Pick since 1976 and is now the sole UK distributor for the Pick-based Mentor system, and provides proprietary software for the Pick user base. The Interface system includes sales order processing, purchase order processing, inventory control, sales ledger, purchase ledger, general ledger, assets register, payroll, computer modelling and manufacturing control.

Goldcrest Computer Services Ltd

10 Tower Crescent
North Hill Centre
Milton Keynes
MK14 6JY
Software package: Goldcrest business system
No of users: 7
Unix

This integrated system includes order processing, invoicing, stock control, sales ledger/analysis, purchase ledger and payroll.

A multi-user business system that is multi-company, and incorporates sales, purchase, nominal ledgers, order processing and invoicing, stock control, manage-

Precision Software Ltd

4 Park Terrace
Worcester Park
Surrey
KT4 7SZ
Software package: Mistress Plus
No of users: 500
Unix

Mistress is a powerful but easy to use relational system embodying the latest in database management theory and implementation techniques to create environments equally suitable for naive or experienced users. Mistress provides an English-like query language similar to IBM's SQL, together with meaningful error reporting and an inbuilt editor for easy correction of syntax errors. It supports six basic data types, including text, and a programmer interface which allows calls from C programs at a number of levels.

Medical Computer Services Ltd

Dearden Farrow
1 Serjeants' Inn
London EC4V 1JD
Software package: Medax
No of users: 2
Unix

A hospital administration system for private hospitals and clinics, covering bookings, admissions, billing, purchase ledger, stock, nominal ledger, payroll, monthly accounts and management information.

Optichrome Computer Systems Ltd

98 Maybury Road
Woking
Surrey GU21 5JL
Software package: Optimus
No of users: 10
Unix

Optimus is an integrated costing and production control system designed by printers for the printing industry. It provides sophisticated management reporting on production progress, WIP sales analysis, plus financial information. It produces on-screen pricing and invoicing.

Root Computers Ltd

Saunderson House
Hayne Street
London EC1A 9HH
Software package: Languages
No of users: "many"
Unix

Basic, Cobol, Fortran, Pascal, C and Ada compilers and interpreters are available to run under Uniplus+, the Root and UniSoft implementation of Unix system III on the MC 68000. Machines available include Bolestone, Cifer, Plessey, Torch, Codats, Wicat, NCR, Corvus, Microbar, Pixel, Sun and many others.

Redwood

9 High Street
St Albans
Herts
Total number of Redwood software users: 750 plus
Software package: Uniplex Word processor
No of users: 3,000
Unix

A friendly menu front-end for Unix systems, providing a set of menus that run normal Unix functions interactively. The Manager option enables users to configure new menus, providing a generalised menu package. The diary and mail options provide additional office facilities. The spool option controls output to multiple printers.

South West Technical Products (SWTP)

12 Tresham Road
Orton Southgate
Peterborough
Cambs PE2 0SG
Software package: Integrated Software

First Commercial UNIX Exhibition

Sponsored by /usr/group/UK

How many computer exhibitions do you visit in a year? Certainly not all of them. To save yourself time and trouble you probably go to the biggest. But if you've a special interest, that means tramping round hundreds of stands before you can find what you're looking for. You may even wonder what it is exhibitors are trying to sell - computer expertise or creative display skills! Taking time out to visit shows is time you could better spend doing real business. You can't afford to waste it. So now, if it's Unix you're looking for, you can review the UK marketplace for commercial hardware and software, all in the same place, at the same time - and without all that pressure and slick stagecraft. So why not drop in to the Hilton International on 25-26 January and spend a few hours window shopping for Unix? Admission is free to /usr/group/UK members. Non-member tickets cost just £3.00 in advance, £5.00 on the door. If you would like to come along or simply want to know more, just complete and send the coupon below to David Bethel at Zilog UK Ltd.

To: David Bethel, Zilog UK Ltd,
Moorbridge Road, Maidenhead, Berkshire.
Please send details of the Commercial Unix Exhibition

Where Pick fits in

To try to understand exactly what Pick is, and where it fits in the marketplace, we talked to Rager Kenworthy, General Automation's marketing director for European operations. General Automation has a particular interest in Pick since its Zebra range of computers was designed specifically for Pick (as opposed to the traditional method of re-writing an operating system to suit a computer).

Kenworthy takes up the story: "Two years ago, General Automation took the decision to diversify outwards from industrial automation, where the company had specialised for 15 years. We decided to provide a system that was at once transparent and efficient to the user, and could support up to 100 different users.

"Pick was already well accepted in the US, where there are something like 80 distributors. And to cut a long story short, we concluded that Pick would become a standard for the 80s - it has a greater appeal to the commercial user than most other multi-user systems, particularly Unix, and is actually more efficient than Unix in installations with a high level of users."

Incidentally, the company considers that Xenix is probably the prime alternative to Pick, and will be releasing Xenix on Zebra during 1984.

"Zebra with Pick was first shown at Comdex just over a year ago, and now runs on five systems ranging from a four-user desktop system to a 50-user minicomputer. We now have more than 300 Zebras installed in eight different countries."

Pick was designed for interactive online data processing and information management. It incorporates virtual memory, a file-structure and non-procedural enquiry language. Data access is controlled through a security system that gives each user a unique file of commands, allowing sensitive procedures to be restricted to privileged users.

The virtual memory management system provides over eight gigabytes of logical address space. Multiple users can access any part of this address space up to the available disc storage capacity of the system.

"General Automation," commented Kenworthy, "is currently working on a joint development

project with Pick Computer Works, internally code-named Vulture. It is a concept conceived by Pick and implemented on General Automation's high performance co-processor.

"I believe, when the project is complete and working in conjunction with, say, a 5500 computer, we'll be looking at something like 2½ times the performance of the existing 5500."

Already the company claims to be the leading exponent of Pick systems. "We have the widest range of Pick systems yet avail-

"One of its great joys is that you can evolve the specification as you work."

able, and are the only company able to offer distributed Pick data processing. We have been enhancing the Zebra range by adding communications subsystems. We can offer Zebra to Zebra, and Zebra to host via standard protocols, and have recently announced and demonstrated an Arnet Pick local area network."

One of the main features of the Pick system is its dictionary-based file structure. A master dictionary is defined for each user which lists all that user's files and authorised commands. Each data file or set of files has an associated data dictionary that logically defines the structure of that file.

The dictionary can easily be enlarged or altered, and complex data relationships may be defined or re-defined without in any way affecting the actual data. The data itself can be located on any available disc space, even if this means that it will span several different disc drives.

But the real advantage of the system is that all of this is managed by the virtual memory and data-

base software, so that it is transparent to both the user and applications programmer.

This, combined with a procedural fourth-generation query language provides the user with the ability to produce reports, in plain, natural, English-like syntax with free-form size structure, making it easy for non-specialist end-users to perform complex enquiry and report tasks.

In a procedural language, a user must specify a particular sequence of steps in the enquiry to achieve the desired result. The user is responsible for ensuring that these steps are correct, that the results are secure, that the user is able to identify desired data and leave the system work out how that data is extracted.

This means that the training advice to end-users (that is, never possible, to find and use aged software), can be amended for Pick users. First, though a good package makes the greater part of an application always remains the small, that it cannot handle.

But since Pick is not a traditional operating system but a true data processing system, it is a relatively easy task to modify, enhance any given package (subject, of course, to licensing agreements). The result is a tailored system at little more than the cost of a package.

"One of its great joys," concluded Kenworthy, "is that you can evolve the specification as you work. You don't need to be strictly to a pre-defined software specification, and this makes it an excellent tool for evolving software as you go."

Which, as every project manager surely admits, is the way in which most software is actually written.

The pick of the packages

From page 29

will be able to turn orders around more speedily while keeping stocks to a minimum.

An important feature of the system is the ability for each user to have immediate access to the computer via his executive terminal. All orders are entered at the terminal. The system then checks stocks, produces invoices, updates ledgers and stock records and accumulates information for periodic reconciliation, summaries and sales statistics.

Software package: Personnel Records
No of users: 4
Pick

The UCL personnel Records System is designed to enable personnel managers or designated department staff to have immediate access to any employee's details by simply keying in the name or number at their executive terminal. Details of salary, personal history, absence record, postings etc, can be displayed as if looking through the pages of a book - but much more conveniently.

A special "Post" file contains details of all jobs in the organisation, whether occupied or vacant. Information such as salary grade, benefits associated with the post, and job title are held in this file which can be accessed by the personnel manager to establish vacancies and exercise establishment control.

Software package: PICS
No of users: 5
Pick

The Production Information

Control System has been designed to work in an online mode and links the various departments in the company to a common production database by means of executive terminals sited around the company. The intention is to serve the needs of all departments in a company, not just the production or finance departments.

Warren Point Computers Limited
Babbage Road
Stevenage
Herts. SG1 2EQ
Software package: PDL/81
No of users: 50+

Zentec International Inc

Lecturer in Systems Analysis and Design

Central London

£13,000

Our client provides education services to the computer industry throughout the UK. It is well established and part of a major high technology organisation with annual turnover exceeding £3,000,000. The position is located in a modern educational centre in Mayfair.

Suitable candidates should be articulate and professional with a successful background in systems design and implementation on mainframe computers. Ideally the successful person will be able to demonstrate expertise in one of the following:

- * COBOL, PL1 or Assembler
- * Structured methods

* Project management

Specialist training will be given to an enthusiastic Systems Analyst who has the qualities to develop skills in Lecturing. This is a unique opportunity for career development in computer education with a well-organised and expanding company. The position offers a competitive salary and an exceptional benefits package.

Find out more - phone Knight on 01-491 4706 quoting ref GK821.

IBM System 34 Analyst/Programmers

Nottingham

£10,000 pa

Bell Fruit (UK) Limited is a well established and major force within the leisure industry. The company is installing a newly developed distributed processing network of System 34's to support information processing for its locations throughout the UK.

The data processing department consists of a small revolutionary team who are responsible for an effective and efficient service.

To continue its policy of expansion the company needs additional professional people who can demonstrate the following qualities:

- * A sound knowledge of IBM GSD systems

* At least two years programming experience, preferably in RPG II

* Good communication skills

You will be offered a competitive salary in line with your abilities and a real opportunity for career progression.

This is an excellent invitation to join a successful company in an attractive working location.

Find out more - contact Knight on 01-491 4706 quoting ref GK822.

BELL-FRUIT (U.K.) LIMITED

Computer Operations Supervisor (Manager Designate)

Harrow

£11,500

Our client is a multinational organisation engaged in the supply of materials for the construction industry.

Their computer centre supports a wide range of commercial applications based on IBM System 38 and Honeywell 62/50 hardware.

Sixty local terminals are in operation providing on-line processing facilities to the various parts of the organisation.

A rewarding future will be presented to the candidate who matches the following criteria:

- * IBM System 38 operations experience
- * Systems monitoring/performance

* Sound technical knowledge of System 38 utilities

The successful candidate will initially be responsible for the day to day running of the IBM System 38 currently operating on a two shift system and the supervision of three computer operators.

This is an excellent opportunity for a person who can demonstrate the potential to assume a future managerial position encompassing additional responsibilities and staff control.

Find out more - contact Knight on 01-491 4706 quoting ref KC350.

Senior Analyst Programmer (Microprocessor applications)

West London

to £17,000

Our client is a well known multinational group of companies. Their Information Systems Department utilises state of the art computing facilities ranging from micros through a variety of mini computer systems to powerful mainframes.

You will be engaged in the development of engineering projects - process control, energy management systems and data logging etc - based largely on supervisory processors linked to a range of supervisory processors including IBM Series 1. You will ideally be a graduate qualified in the following specialist areas:

- * Microprocessor Assembler aspects

* Communications protocols

* Engineering/Process environment
Familiarity with basic control concepts, ladder logic, A/D conversion and the writing of real-time software would be a distinct advantage.

You will be offered an attractive salary commensurate with your own abilities together with a comprehensive benefits package.

Project Leader (Life Assurance)

Hertfordshire

£13,000 to £15,000 + Excellent Benefits

Provident Mutual is a well-established and progressive Life Assurance company. The Management Services department plays a key role in a variety of planned DP projects which place advanced computer systems at the heart of the Association's administration. To continue their policy of expansion, Provident Mutual is seeking a professional who can demonstrate leadership qualities as well as the following experience:

- * Life Assurance, preferably Pensions
- * Major project control
- * Strong analytical skills
- * On-line system design
- * Programming background (COBOL useful)

The successful candidate will lead a multi-discipline team on projects involving both on-line and batch systems with good opportunities for advancement. The benefits package includes a generous mortgage facilities, non-contributory pension scheme, free Life Assurance, free lunches, subsidised BUPA, flexitime and relocation expenses. Find out more - contact Knight on 01-491 4706 quoting ref YY402.

PROVIDENT MUTUAL LIFE ASSURANCE ASSOCIATION

Analyst Programmer (Database - Prime Info)

City

£11,500-£15,000 + Benefits

Our client is a British Oil Exploration, Production and Trading organisation with international interests. The London computer services department houses two Prime's supporting 25 terminals and a range of technical and financial applications.

They currently require an Analyst/Programmer with a good educational background and sufficient experience to take responsibility for database projects, liaising directly with users.

Opportunities will also arise to work in systems administration, telecommunications and other technical applications.

Ideally your experience will include some of the following skills:

* Database applications

* INFO

* Fortran

* Technical applications

You will be offered a salary relating to your experience, and in addition some of the benefits include free pension scheme, health assurance scheme and luncheon vouchers. For further information and an early appointment for interview phone Knight on 01-491 4706 quoting Ref YY205.

SENIOR APPOINTMENTS - £14K +

Project Managers

**Pensions Systems
Database Systems**

**Northern Home Counties
Package c.£19,500**

**New Appointments
New Systems
New Hardware**

Our client is a major Life Insurance company with an expanding Information Systems Division committed to developing a full range of new systems utilising on-line and real time database techniques, via proposed new and advanced hardware facilities.

Two senior appointments have been created to enable the Information Systems Division to take the maximum advantage of incoming advanced technology, and to spearhead ambitious new systems thinking, development and implementation in the company.

The **PROJECT MANAGER, PENSIONS**, will assume management and control of pensions projects employing around 20 development staff, and will take the lead role in overall systems design ensuring that emergent systems meet fully user management's business needs. The **PROJECT MANAGER, DATABASE**, will control a small team of technical specialists in evaluating and planning a corporate database strategy in an on-line, real time, environment. Applicants should be able to demonstrate practical experience in evaluating, selecting and implementing proprietary database software.

Reporting to the Systems Manager, both appointees will be afforded a high degree of autonomy in managing mixed discipline project teams, and each must possess the potential for progressive promotion to the highest levels in the Division, in the course of time. Age indicator is circa 30. A degree or equivalent qualification would be preferable but not essential. Each should have been in data processing for a minimum of 7 years, possess recent experience of TP and On-line systems design, and have significant and successful project leadership experience in their respective fields.

An excellent starting salary will be offered plus significant benefits including free luncheons, non-contributory pension scheme, free life assurance, concessionary mortgage facilities, subsidised BUPA, Flextime, and relocation expenses.

Please send a detailed CV, or telephone or write to SARAH KENNEDY for an application form at the address below, quoting reference number GW 1178.

Candidates should have a minimum of three years running on-line maintenance computer installations on a day-to-day basis. A sound technical background plus a knowledge of JCL and use of utilities are essential requirements.

PHONE 227 2480 (7052)

MANAGEMENT OPPORTUNITY WITH TOP BRITISH MICRO MANUFACTURER

MARKETING MANAGER- INSTRUMENTATION £18K to £22K, OXFORD BASED

We are looking for a Marketing Manager to join a small team set up to develop and support computer-based instrumentation products.

The Marketing role is key to the success of this team.

The successful applicant will be responsible for:

- ☐ Gaining a thorough understanding of the instrumentation marketplace within the UK and overseas.
- ☐ Critically evaluating the company's current and proposed products with respect to this market.
- ☐ Preparing and implementing a marketing plan which will include determining methods of distribution and customer support.
- ☐ Recommending future product development.

This post is based in Oxford, although it may demand considerable travel overseas.

The successful applicant will have:

- ☐ A background in Sales or Marketing, preferably with some overseas experience.
- ☐ Experience in working with advertising agencies, market research companies and distributors.
- ☐ A degree level qualification in a scientific or engineering subject.
- ☐ A minimum of 5 years' post-graduate experience in the electronics or a related industry.

Salary is unlikely to be an obstacle and we offer a particularly attractive benefits package including car; 25 days holiday; free BUPA, life and disability insurance; pension scheme; and generous help with relocation expenses.

If you are interested in this vacancy please contact Polly Keane, on Oxford (0865) 726136 or by letter, for an application form, quoting reference: MM/CW/1.

RESEARCH MACHINES
MICROCOMPUTER SYSTEMS

RESEARCH MACHINES LTD Mill Street, Oxford OX2 1BW. Tel (0865) 745131

Database Administrator

**Rural Midlands
c.£16,000 + Excellent Benefits**

Our client is a leading name in the financial services sector with a diversified and expanding business base.

Reporting directly to the Computer Services Manager, the appointee will be wholly responsible for the provision, planning and control of the company's investment in database facilities, servicing user requirements efficiently and effectively whilst ensuring the integrity and privacy of the data resource.

This is a challenging new appointment with a company poised to make increasingly sophisticated use of database methodology and offers the successful candidate a stimulating working environment together with the opportunity to grow with the organisation. Substantial IBM mainframe exposure is required, together with a minimum of 2 years' DL/I experience and COBOL or ASSEMBLER programming competence. Knowledge of CMS and DOS/VSE would be strong additional recommendations.

In addition to the salary as indicated, the company offers a comprehensive range of benefits including mortgage allowance, free medical insurance, generous life assurance cover and excellent pension scheme. Relocation expenses will be met as appropriate.

Please write in confidence, or telephone for a Personal and Professional History Form to JOHN KITCHEN, at the address below, quoting Ref. GW1160.

SENIOR APPOINTMENTS - £14K +

General Manager - OPERATIONS

**£16-20K
plus relocation**

Rural Essex

Our Client is one of the UK's largest and leading Computer Services Companies, with an already large and constantly expanding VTAM network, supporting over 1,800 TSO terminals and RJE's throughout the UK, and two large-scale IBM mainframe Computer Centres, one of which is situated in an attractive rural area of Essex.

The installation is equipped with two mainframes, an IBM 3033 and an Amdahl V7, running MVS/JES2, with a major machine upgrade, possibly involving the installation of a third large mainframe, and migration to MVS/XA planned for this year. IMS DB/DC, CICS/DLI, VM/CMS, TSO/SPF and NCP are also extensively used.

The Operations function currently comprises approximately 20 Operators, working a three shift system in an automated environment and an Operations Manager. A new appointment has now been defined, at Senior Management level, for a General Manager - Operations to take overall responsibility for Operations policy within this large and very busy Computer Centre.

Key requirements are a long and in-depth association with

IBM hardware and clearly evident leadership, organisation and business planning skills. The ideal candidate will have a working knowledge of IBM systems software and networking principles and a dedicated approach towards the appraisal of user requirements and the appropriation of resources, to provide the most efficient and cost effective service to customers, whose activities range from commercial data processing, through manufacturing into areas of high technology.

Career prospects are good, as one would expect in such a major and highly respected Organisation, and attractive terms and conditions of employment are enhanced by relocation assistance, which is available where required.

Suitably qualified and interested candidates are invited to forward a concise c.v. to **Ian Payne**, Major Account Manager, at the SCR Birmingham office, giving details of current and expected earnings, home and office telephone numbers (to be used with the utmost discretion).

Initial interviews will be held at SCR offices throughout the UK.

UNIX Support/ Dev.

Herts. £12,000
A major manufacturer of advanced computer systems is seeking additional experienced software people in several areas. They would be particularly interested in development people with experience of porting UNIX to new hardware. Ideally candidates will have a good industry awareness and be able to advise marketing people and influence product planners in identifying new products.

Comms. Product Dev.

Herts. £10K-£18K
Whichever aspect of data comms. you prefer you can be sure there is interesting work being done by this client in the area of your choice. Extensive use is made of the M68000 processor and most work is being done in 'C' or assembler. You can join in on X.25 projects, LAN systems, inter-networking, modem design, etc. Let us know your requirements.

DEC Programmers

Berks/Herts. £8K-£12K
We have been approached by several companies with very specific requirements for software people to work in their development groups. The various opportunities provide an attractive range of careers to programmers with 1 to 4 years experience. The work covers systems software, real time applications, communications and embedded micro systems. Assembler and/or high level languages of interest.

Electronic Designers

Wills. £10K-£12K
This is an ideal opportunity to join a rapidly expanding, very successful, high technology company in their modern development centre. The company has a range of micro based products in the office systems area. Ideally we would like candidates to have a minimum of 3 years digital design experience using TTL/LSI. Relocation assistance where required.

DB Analysts/ Designers

London to £20,000
This company's reputation in international computing circles is second to none. To enhance and maintain their reputation they recruit only the best in their field. Analysts with IBM mainframe experience and designers with systems software and DB design experience are required to strengthen the communications division. Candidates with depth of experience in mainframe software please get in touch.

Pascal Programmers

Sussex £10K-£15K
Continuing development of their product range has created the need for further recruitment in our client's systems development team. They require experienced real time programmers with a background of at least 3-4 years using Pascal. Ideally candidates will have used Intel development systems. Applications cover process control, graphics, on-line communications with a stress on human interface considerations.

Systems Executive

Herts. £10K-£12K + car
Approximately 3 years commercial applications including communications, office automation and COBOL are the prime requirements for this specialist support role. You will work in close conjunction with the sales and marketing department and be responsible for the installation and post-sales support of Distributed Data Processing and Office Automation software, together with some pre-sales work.

Pascal M68000

Berks. £8K-£14K
A number of software people are required to fill new vacancies created by expansion. Our client is developing specialised products for communications and broadcasting. These are M68000 based with most development taking place on a host DEC machine using assembler or Pascal. An O.S. specialist with M68000/VERSADOS skills would be of particular interest. A very attractive company.

VAX Support

Essex to £16,000
A major manufacturer with a reputation for high technology products in computing and electronics is seeking experienced DEC software people to help with the internal support of their VAX/VMS development system. In the near future this will extend to their CAD system. Ideally candidates will have Fortran/Algol/Coral experience with a knowledge of Macro 32 and networking.

Tandem Development

Herts. to £12,000
Opportunities to work on Tandem computers without previous Tandem experience are uncommon and extremely attractive. Our client wishes to meet genuine systems software development people who are keen to develop their careers in a software products company. If you have one or more years experience using assembler and a high level language we would like to hear from you.

Systems Designers

Herts. to £14,000
Software engineers and electronics engineers are required to participate in major new product developments in communications, office system products and LAN applications. Previous experience is only confined to technical applications. The primary requirement in this company is a positive attitude and a desire to succeed. The company has an excellent programme of internal training. Relocation assistance.

Comms. Support

London £16K + car
This is a very attractive opening for a communications specialist to join a rapidly expanding computer manufacturer in a front-line support role. Our client's name is well known and highly regarded by most experienced people. Your knowledge should cover common protocols, SNA, 3270, networking etc. Ideally with experience in the banking and/or financial sectors on mainframe or large minis.

S/W Tech. Authors

Beds/Hants. £9K-£13K
These are no ordinary positions. We are convinced that any technical authors who are seriously interested in developing careers with leading companies in the computer industry should be talking to us. Our clients are seeking experienced authors who can work closely with software and/or hardware development teams to prepare user manuals and operating instruction texts.

UNIX 'C' Programmers

Berks. £9K-£14K
Few companies can demonstrate a more impressive record in the development of microprocessor software. Recent projects include the production of a COBOL compiler for operation under UNIX. We are now seeking programmers with a background in systems software and INTEL micros to participate in the development of associated run-time systems in 'C'. A position also exists in the compiler support team.

Banking Proj. Mgr.

Herts. £16K + car
A highly successful U.K. subsidiary of an American company is seeking an experienced project manager to handle major business in the banking sector. Candidates will need to be familiar with banking applications. They will also be required to demonstrate a positive attitude in good client relations and will be technically competent in the areas of TP and communications.

Project Managers

Hants/N.W. £16K + car
We wish to hear from candidates who have had significant technical experience in major real-time projects. As well as technical experience in signal processing, C, defence systems, use of MASCO and knowledge of high and low level languages you will need experience in project control in a commercially aware environment to lead people on fixed price contracts.

Client S/W Support

Bucks & N.W. to £16K + car
Continuing expansion in this highly successful manufacturing company opens the door for software people with experience in on-line D.P. systems, T.P. and comms. Candidates will be expected to assist clients with applications development, performance as required and generally act in an account manager capacity. Excellent prospects and relocation assistance where appropriate.

Micro Development

W.Herts. to £13,500
Our client occupies a leading position in the design, development and manufacture of a range of micro based data capture terminals in retail applications. Additional team members are required for a new project just being named. Candidates will need real time programming skills with assembler and a high level language. RSX and CP/M desirable, 2780 comms. useful.

Videotex Development

London to £16,000
Attractive positions exist for software professionals in the further development of view-data products and related technologies. Currently using PDP11 and VAX with RSX11 and VMS but shortly adding UNIX and 'C' for development tools. Fortran experience would be of immediate interest. Positions range from development to project management in a customer environment.

International Consultancy

Surry to £13,000
Programmer/Analysts and Systems Analysts with 4 years experience gained in a commercial computing environment using assembler or high level languages on mini or mainframe equipment could significantly broaden their experience by working for this international consultancy. Work assignments are in the U.K. or worldwide. Applications cover the full range of business and commercial systems.

STOP PRESS

A Highly Rewarding Career with Complete Job Satisfaction

As a specialised recruitment consultancy we are actively seeking 2 Trainee Recruitment Consultants. Successful applicants should possess:
★ General Knowledge of Computing Industry. ★ A pleasant personality. ★ The ability to relate to a wide range of people - and above all the ambition to succeed in a most challenging and demanding environment.
If you can match up to these standards the rewards are unlimited and a call to Terry Harvey could introduce you to an exciting career you'd never previously considered.

Write or telephone (02403) 28383 during office hours.
We are always ready to discuss these and many other interesting positions.

Evenings and weekends only:
Terry Harvey - Great Missenden (02406) 4705
Brian Coates - Chesham (0494) 785722
John Barker - Chesham (0494) 783096

BANKING SYSTEMS DEVELOPMENT

What's the most vital asset in banking?

CAPP ASSOCIATES
01-686 9693

Capp House, 96d South End,
Croydon CR9 3SD.
International & UK
Recruitment Consultants

Perhaps the most important asset in any leading international merchant bank is one which seldom appears on the balance sheets. People, with the right skills and positive approach, are that vital investment.

CAPP Associates has been assigned the task of finding high calibre computer professionals for Schroder Wagg - one of the city's leading merchant banks. So we are looking forward to receiving your call, when you can discuss some exciting career opportunities with us.

The hardware configuration consists of 5 Hewlett Packard 3000's running under MPE IV. The Image Database Management system and laser printers are used in an environment which offers considerable potential for the continuing development of interactive systems. The following posts need to be filled:-

SYSTEMS ANALYSTS £11-£15,000 p.a.

to join an expanding team taking over from consultants and a bureau operation, implementing banking and investment systems. With a minimum of 3 years analysis and design experience, you should have completed at least 1 system from initial study stage through to implementation. Experience at financial systems and a flexible approach to problem solving are required, whilst familiarity with database, on-line working and programming will be an advantage.

PROGRAMMERS to £9,500 p.a.

- around 1-2 years sound Cobol experience is ideal for these positions in a young and effective team, with one post requiring more experience, for which a suitable salary will be negotiated.

Some exposure to on-line, database working is an advantage although good batch experience would be considered. Conscientious and talented programmers will find these to be excellent career opportunities, with Hewlett Packard training provided as necessary.

In addition to very competitive, negotiable salaries, Schroders offer an outstanding benefits package which includes home mortgage subsidy, season ticket loan scheme, non-contributory pension with free life assurance, free PPP medical insurance, free lunches in the staff restaurant and 4 weeks holiday.

Either call into our offices or telephone for a preliminary talk, or send a full C.V. quoting ref: CW002-4B.

Information
Technology
Unit.

THE PROBLEM.

THE SOLUTION.

YOU'LL BE THE HUB OF A LONG TERM STRATEGY FOR INFORMATION TECHNOLOGY.

After all the talk about the wonders of Information Technology and the paperless office of the future, it's surprising how few of the country's larger organisations are in fact tackling the task of fully integrating their electronic aids. Most seem content to keep their resources dissipated and ultimately less efficient.

Not so at the Electricity Council, the central body for the Electricity Supply Industry in England and Wales. Here there is a forward line in thinking, and talk is already being turned into action.

The Council has brought together its support services for Office Systems, Computing, DBMS, Word Processing, O&M and Digital PABX (ICL 2957, Wordplex, IBM bureau, GEC, TI, Telex Manager, Micros), to form an Information Technology Unit.

Now we're bringing together the skilled professionals to form the unit's small multi-disciplined team. This will be the central task force implementing a long term integrated strategy for the structural development of Information Technology.

More than just a project, the scope and complexity of this strategy will demand imagination and commitment from the IT team, but there is no doubt that in return it will offer a unique challenge, innovation and career value to those who join us. An attractive package of benefits will be offered in addition to the salaries quoted, and assistance with relocation may be available.

Listed below are the specific jobs for which we're now recruiting and an outline of the experience and skills required for them.

departments and to lead a small team of professional systems analysts and programmers.

- ICL experience.

SENIOR COMPUTER SYSTEMS AND COMMUNICATIONS ENGINEER

£14,261-£17,653 (Ref.99/CW)

- Experience in planning and installation of communications and computer networks including the evaluation of hardware, software, and writing of or modifying interface software to produce an integrated computer, communications and office system.
- Knowledge of computing science, telecommunications and data transmission.
- Familiarity with modern computer and communications techniques including local area networks and digital PABX.

SENIOR PROGRAMMER

£10,408-£12,628 (Ref.102/CW)

- Experience of designing, writing and testing computer programs in the main languages, preferably ICL Range Cobol and Fortran 77.
- Knowledge of application generators, computer systems, operating system software, and of computer hardware and its performance capabilities.
- Familiarity with data base management and data

dictionary techniques preferably IDMS and DDS under VME.

- Familiarity with modern methodologies including structured programming techniques.

SYSTEMS PROGRAMMER

£9,441-£11,437 (Ref.116/CW)

- 2 years' experience in systems programming and operating system software evaluation, testing and recovery, preferably under VME.
- Knowledge of data base software, data dictionary, computer hardware and its performance capability.
- Familiarity with computer operations and application programming.

APPLICATION PROGRAMMERS

£9,441-£11,437 (Ref.117/CW)

- 2 years' experience in designing, writing and testing computer programs in the main languages, preferably ICL Range Cobol and Fortran.
- Knowledge of computer systems, operating system software, and of computer hardware and its performance capabilities.
- Familiarity with data dictionary techniques, preferably DDS under VME.
- Familiarity with modern methodologies including structured programming techniques.

INTERNATIONAL BANK £11,000 + Bonus
City-based bank has a vacancy for an ambitious analyst/programmer with two years' experience in mainframe systems using Business Recorder Data. The ideal candidate will be looking to take on a responsible role and get involved with financial systems from design through to implementation. Very generous banking benefits. REF: M/W4025

DATA GENERAL/COBOL £10,800
London based manufacturing company urgently require an analyst/programmer with a mainframe background. Data General being particularly desirable. The role of analyst is fairly small and you will adopt essential. Your involvement will cover development and support and your user liaison skills will be used to the full. REF: M/W4006

ZOOM INTO '84 ESSEX/CITY £10,500
Due to expansion a unique opportunity has arisen for all levels of programmers and analysts/programmers. At DYNASE, COBOL environment and have some experience in CICS, DL/I or VSAM. The company offers excellent opportunities within a growth of environment, and a full range of benefits. REF: E/W2737

IBM SYSTEM 38 CITY To £12,500
Excellent opportunity for a successful analyst/programmer in a lively environment. The ideal candidate will have three years' D.P. experience with good RPL (II) skills, technical ability and user liaison. Some L.K. travel is envisaged. Banking benefits also included, on top of a competitive salary. REF: F/W2863

These positions are just a brief selection from our extensive database of jobs in London and the South-East. If you cannot see a position advertised for your particular skills, or are considering re-training or a change of bank, a quick phone call will put you in touch with a consultant specialising in your field. 70% of jobs in this industry are never advertised. Why not let us tell you about some of them? We look forward to hearing from you.

ANY ICL COBOL ESSEX & CITY To £10,000
1984 expansion plans + exciting development projects = fantastic opportunities for programmers with 12 months' ICL COBOL experience to join this friendly team. The company offers extensive training in their software products and some great prospects for advancement. REF: D/W3009

HONEYWELL WEST LONDON To £10,500
Rewarding career opportunities for programmers with 18 months' Honeywell COBOL experience. Your job is not essential as this prestigious organisation offers extensive training facilities and great prospects. REF: D/W3942

IBM SYSTEM 34/BANKING £14,000 + Bonus
Superb opportunity for 1984 Three years + IBM System 34/RPO II essential, with strong analytical skills, but willing to program where necessary. Occasional European travel, and the prospect of taking over the department. Full benefits package includes subsidised mortgage, cheap loans, etc. REF: C/W4027

JUNIOR RPL II/SYSTEM 38 £8,000 p.a.
Can you offer six months' solid RPL II/System 34 experience? You may be a programmer now or a programmer in training; this is your chance to move onto an IBM System 36, and get involved with the development of financial/insurance systems, and a network of IBM PCs. Benefits include health insurance and mortgage subsidy. REF: C/W4028

HEWLETT PACKARD - COBOL To £12,500
Exciting opportunity with a leading London based insurance organisation. They are seeking an individual with a solid DEC/PDP, RPL/SE, BASIC + 2 COBOL experience to develop new office automation systems. Lots of analysis work and scope for advancement. REF: A/W4033

DEC/PDP - BASIC + 2 £9,500
My client, a leading London based transport organisation, is seeking an enthusiastic, ambitious individual with a solid DEC/PDP, RPL/SE, BASIC + 2 background. The 'key' is the limit regarding promotion prospects. It is anticipated that the successful applicant will move into management next year. REF: A/W4034

DATAPOINT MIDDLESEX £8-13,000
Expanding software house requires programmer with a minimum of 18 months DATAPOINT experience using DATABUS. Great team atmosphere and excellent career prospects for an ambitious candidate. REF: M/W2614

ICL 2900/VME ALL LEVELS £9-11,000
1984 will be a good year! My client is in the financial sector and requires people at all levels to join their expanding team. 18 months' ICL 2900 COBOL is essential coupled with good VME/RS or VME skills and some experience of FORTRAN or PL/I. This is an outstanding opportunity to further your skills and increase your salary in an interesting and stimulating environment. REF: D/W6314

RETRAIN INTO BANKING - FIVE FIGURES!
Good VAX BASIC + PL/I/RS + 2 experience is required by this City based bureau organisation offering for Banks throughout the world. They offer retraining on their advanced banking projects and plenty of development work. Good prospects for advancement into analysis. REF: A/W2787

COBOL/CICS CENTRAL LONDON To £11,000
Petroleum company in Central London has formulated its plans for 1984, and requires six programmers and some CICS and/or DL/I is essential. MVS is preferred, though they will look at good DDS/VS people. Four positions will be filled at good DDS/VS people. Four years, and two will be support roles, involving extensive user liaison. REF: C/W2976

SYSTEMS ANALYSTS/ESSEX To £14,000
Because of increasing demand for new systems, I have two clients wishing to recruit a number of analysts to work on the design and development of financial and commercial systems. These are challenging positions with excellent career opportunities. If you have over two years' analysis experience, and have taken at least one project from design to implementation, I would like to hear from you. REF: E/W2699

IBM SYSTEM 38 £9-13,000
Great opportunities for 1984 in Middlesex. Bucks and Central London for analyst/programmers and wishing to increase their salaries and promotion prospects. For a new challenge in the New Year please ring me. REF: C/W2221

Brushfield House, 12 Brushfield Street
Bishopsgate, London E1 6AN

COMPUTER PERSONNEL CONSULTANTS

THINKELECTRIC

Programmers · analysts · operations staff

Ask us. We will give you a straightforward answer because of our experience of market demand throughout the UK and overseas.

We have more sales consultants, better market penetration and around twice as many contractors actually working for us as any single competitor.

We have seven different office locations which provide a real understanding of regional variations in rates and requirements – and give you access to contract opportunities wherever you want to work.

Ring us.

If you have solid experience of current hardware/software techniques you almost certainly have a market value as a contractor: we will tell you what it is.

While we're at it, we'll tell you about our 'People Package' for analysts and programmers – the concept we pioneered back in 1978 to remove many of the difficulties of working on your own account, while preserving your independent status. And we'll explain to you why more clients spend more money with us and our contractors than with anyone else, and how eleven years of providing the best service in the UK built our 1983 turnover to over £12m.

Ring the appropriate number, or mail the coupon.

Computer People

Market leaders.

the choice is yours

Ring today.

GET THE KEY TO YOUR FUTURE AND OPEN UP A WHOLE NEW LIFESTYLE.

The Yorkshire Building Society is one of the UK's largest and most progressive Building Societies with over £1 Billion of assets.

From this secure and well established base the society is now completing its plans for the introduction of totally new hardware and application systems designed to meet its computing needs into the 1990's.

Dual Honeywell DPS7 mainframes will be installed to support a growing demand for on-line and real-time systems.

A number of new positions have been generated which offer excellent conditions, progression and technical content.

The following key personnel are now required to ensure the success of this new venture.

SENIOR ANALYST/ PROGRAMMER c£11,000

The ideal candidate will have at least 4-5 years experience in DP, with some previous supervisory experience and an in-depth knowledge of COBOL, DPS7 or LEVEL 64 with TDS.

Contact STEVE SYKES or JOHN MASON on Leeds (0532) 455911 during office hours or STEVE SYKES on Appleton Roebuck (090484) 350 evenings and weekends, or write to the address below with brief cover details.

ANALYST/PROGRAMMER c£8,500

We are seeking 2 bright Analyst/Programmers with a minimum of 2-3 years experience in IT, and in-depth knowledge of COBOL, preferably on DPS7 or LEVEL 64 with TDS. Candidates with experience in a similar environment will also be considered for these posts.

This is a rare opportunity for top caliber people to join a large, successful and expanding organisation at the outset of this major development. The jobs are stimulating and challenging as you will be working with "State of the Art" hardware and software and there are ample opportunities for progression as the department grows.

Head Office is located in the centre of Bradford, within easy reach of the Yorkshire Dales and attractive and reasonably priced housing areas.

This progressive financial institution offers very attractive salaries plus concessionary mortgages, the usual large company benefits and excellent working conditions. Relocation costs will be paid where appropriate.

PROGRAMMERS

Buried Treasure

Salaries to £13,000pa plus Mortgage Subsidy.

Have you been sifting through the advertisements looking for the right job with good career prospects in a challenging and expanding environment? Well you've found it here.

Our client is a market leader in the financial field. The increasing automation of their business and a commitment to investment in efficient systems has created exciting prospects for experienced computing professionals to work on a number of major new development projects. A new IBM 3083 under MVS with CICS, ROSCOE and UFO will support a major expansion in on-line systems.

Systems Programmers will have a minimum of 3 years Assembler or PL/I programming either in software or in applications with a high technical content. Relevant training will be given but experience of IBM OS/VS1 or MVS and on-line systems is essential.

Programmers will need a minimum of eighteen months experience of PL/I preferably in a large scale financial or commercial environment. IBM Cobol/Fortran Programmers with exceptional skills could be considered for retraining.

Analysts and Designers will have at least 2 years experience and a technical background. The ability to liaise with users and some experience of project management would be useful.

For all posts excellent training facilities exist to make the best of your career opportunities, so we are looking for potential and not just experience. Salaries will be dependant entirely on ability and supported by an excellent benefits package including mortgage subsidy and non contributory pension. Relocation assistance will be available if appropriate.

TECHNICAL

LOGSYS

COMMERCIAL

LOGSYS Advanced Systems provides systems design, programming, and project implementation services to the industrial and scientific and defence community. Most projects are real-time mini or micro computer systems with a relatively large or complex software content. Our services are provided by high calibre software staff, about half of whom work on site at client's premises, whilst the others are based at our research and development centre which is shortly moving into new premises in Wokingham.

As a result of the high demand for our services we now need the following additional staff:-

VAX SYSTEMS PROGRAMMERS (2) to £14,000

1 position in Portsmouth, 1 in Farnborough, Hants. VMS, FORTRAN, CORAL and MACRO essential. Database experience and RSX an advantage.

PROGRAMMERS/SOFTWARE ENGINEERS (6) to £13,000

Portsmouth. Design and development of state-of-the-art real-time Defence systems. CORAL essential, MASCO desirable.

COMMUNICATIONS SPECIALIST (1) to £14,000

Wokingham. TELETEX, X25, Local Area Network, PASCAL, 16-bit micro and Assembler experience desirable.

The company is continually in the forefront of advanced technology and development, and flexibility and the ability to respond to rapidly changing technology is an important factor in the success of this prestigious operation. Our projects have included interactive graphics, display systems, navigational trainers, simulation and modelling, process control and automation, expert systems, command and control systems and system software.

LOGSYS

To apply for one of these positions or to obtain more information, either telephone, write or send your resume to Clive Williamson, LOGSYS, 72 Kingsley Road, Northampton NN2 7BL. Telephone 0804 711209. 9 a.m. to 9 p.m. any day including week-ends.

LOGSYS Business Systems, an associate company to Logsys Advanced Systems, produces specialist applications programs and packages for commercial users, particularly Insurance and Reinsurance Brokers, and Advertising Agencies. Early in 1984 we shall be moving to brand new offices in Wokingham, which will also house our VAX, PDP11 and WANG computers. We have other offices in London and New York.

As a direct result of the popularity of our business systems we now urgently require the following additional staff:-

ANALYST/PROGRAMMERS (2) to £12,000

Wokingham based, probably 2 days in London per week. A minimum of 2 years experience in insurance, reinsurance, commercial or financial systems. Previous Hardware is largely irrelevant.

PROGRAMMERS (3) to £10,000

Wokingham. 2 years commercial experience using either COBOL, BASIC PLUS or BASIC PLUS TWO essential.

Our staff are expected to produce robust and effective systems, on time and to pre-defined standards. Senior staff are required to travel to client sites as necessary, and therefore must be of smart appearance.

If you enjoy working in a challenging, changing and growing organisation, where management are responsive, and where you can influence decisions and grow with the Company, then you will enjoy LOGSYS. Working conditions are excellent and there are regular salary reviews and useful fringe benefits.

Ambitious Programmers Wanted!

If you have two or three years' programming experience, preferably - but not necessarily - on large IBM or ICL machines, consider the advantages of a career move to a leading software house.

P-E Computer Services is the software arm of P-E International, an independent British consulting group which has worked for more than 5,000 clients in over 50 countries since its foundation in 1934.

A career with P-E can offer you:

- ★ the opportunity to gain experience on a wide variety of hardware and software
- ★ Interesting and challenging assignments in all areas of commerce and industry
- ★ the chance to travel (nearly half our business is overseas)
- ★ a choice of career paths: analysis, project management consultancy, training, sales and marketing and many others

Our package includes:

- ★ competitive salaries
- ★ profit sharing scheme
- ★ tax-free general expense allowance
- ★ choice of company car
- ★ non-contributory pension
- ★ share-purchase options
- ★ free life and accident insurance

If you have the flair, talent and personality to succeed in the exciting and competitive software services industry, please write to me now enclosing a full and detailed c.v. or telephone for an application form quoting ref. GM/1/73. Geoff Mackenzie, P-E Appointments Division, 166 Piccadilly, London W1V 9DE telephone 01-409 2669.

PE

Open in 1/10

REAL-TIME SOFTWARE ENGINEERS

advanced data communications

DORSET COAST - POOLE
UP TO £16,000pa

Our Data Communications Division has interesting projects in S.P.C. linking systems involving the latest CCITT signalling protocols, new telex conversion facilities and software sub-systems to control exchange configuration and management reporting systems. Some 200 engineering staff are currently employed. Significant and sustained growth into the late 1980's is projected as a result of our successful market penetration in both public and private sectors. This has created exceptional career opportunities for real-time engineering software professionals.

MANAGEMENT

Software Team Managers

To specify systems, contribute to new design concepts, manage software teams and provide technical advice to sales.

Configuration Control Manager

Applicants for this challenging post must have several years experience of real-time software engineering in a large systems environment.

DESIGN

Real-time software designers to analyse complex operational requirements, functional decomposition of software sub-systems down to module level, and write detailed software requirements and design specifications.

DIAGNOSTICS

The work includes the design and development of diagnostic software associated with computer and communications hardware. Both hardware and software skills will be required.

DEVELOPMENT - Software tools & facilities

The work provides an opportunity to specialise in this interesting area where constant up dating of software facilities is carried out.

We would like to hear from professionals with a good background in real-time software on mini computer systems, particularly those with real-time ASSEMBLER. Experience in communications, operating systems or process control environments would be an advantage.

There is a most stimulating small team professional environment at Poole. Competitive salaries will be negotiated and full relocation costs will be met to this superb coastal area.

Interested? Then ring to discuss these opportunities informally reversing charges, on 0202 675181 ext 2028 on any weekday up to Friday 20th January.

Alternatively, write with full details of qualifications and experience quoting reference CWP/B18 to: Glyn Griffiths, Plessey Controls Ltd., Sopers Lane, Poole, Dorset BH17 7ER

Communications Consultants

£16,000-£23,000 plus car

Berks/Middx

Plus Relocation

Our client is a growing and very exclusive consultancy specialising in advanced telecommunications and electronic office systems. Their assignments are in both public and private sectors and include the top organisations in finance, oil, electronics, manufacturing, public utilities and Government.

They provide a totally comprehensive service on the full range of Information Technology from strategic studies to installation and their policy of employing only the very best specialists as consultants has secured them a highly prestigious reputation within the industry and amongst their clients.

Headed by one of its best known professionals in computing, the company is securely established financially with a five year development plan which is backed by significant funding and resources, enabling them to pursue their policy of excellence and innovation which has already established them as a leading communications consultancy.

They now seek a small number of top level communications professionals with practical expertise at both technical and project management levels with particular emphasis on PABX systems.

There is an unusual opportunity for the more experienced and senior consultant to develop a business sector which could soon lead to the running of an autonomous subsidiary company within the group.

The company encourages individual responsibility at all levels and the informal structure allows all consultants access to Directors at any time.

Applicants will work in London or the Home Counties with opportunities to participate in European assignments, and must have a strong background in the evaluation and installation of PABX systems.

For further information please telephone **BOB MILLAR** on 02403-28866 or 01-567 5501 for our 24 hour answering service.

Systems Programmers

British Telecom
offer you
two chances
to earn over
£14,000!

If we don't
connect at
Heathrow, we

can rendezvous at the Café Royal.

Take a trip down to Heathrow next Wednesday evening and your earning potential and career prospects could take off in a very big way. British Telecom are booking into the Sheraton Skyline Hotel and we're inviting Systems Programmers to drop by, meet the team and discuss the prospect of earning over £14,000. But what if you can't make it? No problem. We're offering you the option of getting together with us at the famous Café Royal - in the heart of London's West End - the very next night. In other words, we're doubling your chances of a dramatic rise.

Why are we going to so much trouble? Well, the simple answer is that BT are in the grips of a major expansion drive. To prove the point, we're adding over a dozen Systems Programmers to our very talented team, here in Harmondsworth, near Heathrow Airport. You could be one of them! Senior IBM Systems Programmers are now needed for key supervisory roles. When we tell you that our hardware includes over forty 4300 machines and 3081, 3083 and 3033 systems, you begin to appreciate the scale of our challenge. And when we reveal that we're operating with MVS, JES2, VM/HPO, VM/CMS, DOS/VSE, SSX, CICS, IDMS, AC/VTAM and TSO/SPF, you can see that we talk the language of

sophistication. That's why we're insisting on at least 3 years' IBM experience - preferably at supervisory level - plus the confidence and strength of personality to lead by example. If advanced software is your speciality, there are over 14,000 good reasons for spending an evening in the company of British Telecom. IBM Systems Programmers are also in heavy demand. With as little as 18 months' experience (including familiarity with some of the above software), you could qualify for over £12,000. The intellectual scope and stimulation are waiting for those with genuine ability and ambition.

So make a date with British Telecom - ring Gill Hunt rightaway on FREEPHONE 2792. Alternatively, you can dial us direct on 01-432 9288. If you really can't make either of the dates but would like to put yourself in the running for a big rise, ring today or write to us FREEPOST at: BT DPE, Recruitment Centre, Dept CW, Tenter House, 45 Moorfields, London EC2Y 9TH.

Data Processing Executive British Telecom

A Work of Art?

Our client is an acknowledged leader in the field of semiconductor technology, and with 40% annual growth they are the fastest growing IC company in the UK.

Serving telecommunications and defence industries they specialise in custom design and special LSI/VLSI devices for which significant developments have been made in CAD and automatic layout technology.

They are committed to a policy of continual investment in people, equipment, facilities and research to ensure that they retain the lead in software technology, bringing the user more powerful and cost effective aids to I.C. design, analysis and layout. This ongoing strategy has created the openings for additional professional engineers who will provide circuit design expertise, device layout and optimisation tools, systems design and integrity and application and test procedure knowledge.

SENIOR SOFTWARE ENGINEERS £12,000 - £16,000
Logic Simulation

Working within our logic simulation group responsibilities will include writing comprehensive cell libraries and integrating simulation into the overall design and layout environment.

Applicants should have a sound knowledge of digital electronic engineering ideally in an I.C. or PCB environment, together with a degree or equivalent in Electronic engineering, Computer Science or related subject.

SENIOR SOFTWARE ENGINEERS £12,000 - £16,000
I.C. Layout Techniques

Leading the layout group the primary objective will be to write software which will allow I.C.'s to be designed entirely using CAD. A degree or equivalent in electronic engineering, computer science or related subject is essential and a background in electronic design would be an added advantage.

The **INSTALLATION** currently consists of a network of two VAX 11/780's running under VMS plus two Applied Graphics Systems under RSX and is to be expanded in 1984. Languages are FORTRAN and PASCAL and there are plans to move to the UNIX operating system.

Highly attractive salaries plus relocation assistance are offered together with other major benefits.

LONDON, NORTHERN HOME COUNTIES, MIDLANDS.

RECRUITING EVENT SALES AND TECHNICAL SUPPORT

INTEL is an acknowledged leader in microprocessor and associated systems technology. Over the past decade we have achieved many of the firsts in our industry, establishing the microprocessor as the corner-stone of the current revolution in computing technology both at hardware and software levels.

In line with our rapid growth and continued objective to provide the highest standards of sales and technical support, we are looking for additional sales and technical staff qualified to degree or equivalent levels in electronics or computing studies to join in our success.

We need:

FIELD SALES ENGINEERS -

Experienced in component or system sales

In addition, we have vacancies for:

TECHNICAL SALES ENGINEERS -

A stepping stone to field sales

FIELD APPLICATIONS ENGINEERS -

Experienced engineers to assist in pre-sales activity with our customers

SYSTEMS ENGINEERS -

To provide post sales hardware and software support at all levels of expertise, particularly in database management and operating systems

For an informal discussion on the opportunities at INTEL, come along to our open recruiting event at **THE CREST HOTEL, LUTON** on **THURSDAY JANUARY 19** between 2.00 pm and 9.00 pm. Alternatively, contact Ray Withey, Personnel Manager, at our Swindon UK Headquarters, giving details of your career to date.

Team Leaders · Senior Engineers · Electronics Engineers & Real-Time Software Specialists

Our investment in communications will...

Make 1984 the year you joined one of our small teams of multi-disciplined Engineers at New Southgate. There you'll be working in a stimulating environment alongside highly skilled professionals with a mission to take up the challenge of tomorrow's communications systems and expand our business in the highly competitive UK and overseas markets.

We are currently involved in several of the most interesting telecommunications projects of the future which must inevitably evolve into fully integrated information delivery systems optimised for both voice and data. Among

these STC's new digital telephone switching system, already of proven international performance, is now undergoing extensive UK software design, development and adaptive engineering.

While the course of the Information Revolution can be defined in broad contours, it cannot be predicted in detail. Whatever predictions are made today are bound to be overtaken by accelerating technology and shifting demand. What is predictable however, is the need for a number of key men and women to join us in a variety of functions:

...take your career into the 21st century now...

In all cases, we are looking for ambitious and committed Engineers who are qualified to Degree level or equivalent and can add to the depth of experience within our existing professional teams.

This is your opportunity to make a major contribution to projects capable of transforming the field of voice and data communications. In consequence, we are offering salary packages designed to attract the best people. Generous assistance with relocation expenses is available as appropriate.

...Switch to STC.

Take the most important step in your career by telephoning us on 01-368 1234 and asking for Vaughan Hartridge on ext. 2215 or Roger Edmonds-Brown on ext. 2579.

Alternatively, phone Vaughan Hartridge on St. Albans (0727) 60043 or Roger Edmonds-Brown on 01-361 2931 on any weekday evening (between 8-10pm) or Saturday or Sunday morning. If you prefer, write with full details of your experience to: Vaughan Hartridge, The Recruitment Centre, STC Telecommunications Limited, Oakleigh Road South, New Southgate, London N11 1HB.

Developing tomorrow's communications technology
STC TELECOMMUNICATIONS

Fed up with the commuting rat race?

Work in Windsor

Our client, world leading manufacturers of micro-based office automation and word processing equipment, wish to expand their development team during the evolution of an exciting new range of products.

Successful applicants are likely to be aged between 25 and 35 with a minimum of two years' relevant experience.

The company's Systems Division, which is responsible for applications and communications programming for a world-wide market, situated in the pleasant surrounds of Windsor, offers excellent working conditions in an informal yet highly professional team environment.

The competitive level of remuneration includes generous salary and bonus scheme, and a first class benefits package including pension plan, life cover and medical insurance.

Communications Programmers/Development Programmers
(four vacancies) to £13,000 pa plus company car.

A sound structured language (eg PASCAL), gained from a real-time systems environment is required for developing Office Automation, Word Processing, Communications, Electronic Mail, Electronic Filing, Compilers, Interpreters and Operating Systems.

Product Support Specialist to £10,000 pa

This position involves the evolution, development and testing of new and existing programs, in addition to promotional and post-sales support. Whilst experience and versatility are important, the successful applicant must be willing to gain a detailed knowledge of the company's products and to specialise within the group's activities.

Technical Writer to £9,500 pa

Due to the increasing number of development projects, an additional writer is required by the technical publishing group with the Division. The job entails liaising with programmers on specific projects with a view to providing accurate and readable User and Support documentation.

Please apply with curriculum vitae or telephone George Shaw on 01-549-9236 (24 hour answering service) for an application form.

Computer Instructors

British Aerospace has vacancies in Saudi Arabia for experienced Computer Instructors to join its staff at the Technical Studies Institute at Dhahran, where they will be responsible for training Saudi personnel in the programming and operation of modern computer systems.

If you have the qualifications and background of experience set out below, you could earn at least £15,831 in your first year, £16,581 in your second year tax-free, as a Computer Instructor...

...working in Saudi Arabia with BRITISH AEROSPACE

Responsibilities include providing students with a thorough grasp of the principles of computer programming and operations and preparing computer systems programme routines and procedures. Successful applicants will be required to give instruction in Cobol, machine coding, test routines and programme verification; operation of computer equipment and peripherals; and processing and control of data flow.

Applicants should have graduated from an appropriate civil or military Technical Training Institute, having gained HNC or equivalent in Engineering, Computer Sciences or Mathematics. They should be able to show at least 3 years' recent programming experience relevant to the Hewlett-Packard HP3000-44 computer installation which is the current equipment, using Cobol and Interactive Data Processing. Candidates must be familiar with modern computer-based training techniques and must have gained at least two years' experience as instructors in the past five years.

In addition to the high tax-free salary, successful applicants will receive free accommodation, messing, medical care and other benefits, including travel-paid UK leave.

Please apply in writing giving brief details of appropriate experience or telephone Preston 634317.

SENIOR COMPUTER SPECIALISTS

Oil Industry Libya
Tax-Protected Salaries

Our client is Arabian Gulf Oil Company operating in the Socialist People's Libyan Arab Jamahiriya on the North African coast. A large number of both male and female U.K. employees work there and happily and regularly commute home, or are resident with their families. AGOCO, with a production capacity well in excess of 7 million bbl, is in the process of reviewing its systems and hardware strategy with a view to replacing all current commercial and operational systems on new hardware and we have been retained to recruit high calibre.

Project Leaders

Successful applicants will initially assist in the development of this strategy and then participate in detail system design and implementation. To meet the demanding standards required you will need 7 to 10 years experience in Project Management and have worked with both mainframes and minis. You will also require good communication skills and the ability to work at all levels of management. Experience in the oil industry is obviously essential.

BENEFITS

Family status based in Benghazi with fully furnished accommodation and services provided at company cost. A generous negotiable salary (to be discussed at interview) 90% of which is fully remissable; 28 days annual vacation to point of origin with paid air fares for employee and dependants; Special interim leave to Athens also with paid air fares; Relocation allowances.

We invite you to submit your resume and you will be sent an obligatory application form to fill. You should quote the job reference number on all communications.

You need not apply if you lack the qualifications advertised. Any irrelevant applications will not be answered.

JAWABY OIL SERVICE

UMM AL-JAWABY OIL SERVICE CO. LTD.,

Recruitment Co-ordinator, Job Ref. AG/11, 33 Cavendish Square, London W1M 9HF.

Interesting company vacancies using brand new equipment in a challenging new environment.

DATA PROCESSING MANAGER

£12,500
plus car
plus benefits

To manage and control a small but effective D.P. department. Work will consist of maintaining the hardware operation of existing D.P. systems and providing a service to a multi-site facility in order that existing programmes may be amended where applicable. Further investigation of company systems will be required to consider practicality of computerisation and the recommendation of procedural alterations prior to implementation of EDP.

PROGRAMMER

£9,000
plus benefits

Responding to the D.P. Manager but working with a low level supervision in RPL language. Work consists of system design, preparation and program specification including writing, testing and maintaining programmes on site.

This is a unique opportunity to join a large progressive company who is a market leader in its field.

The D.P. department is modern with new equipment (CMC Reality) and offers a challenging and extremely interesting opportunity, on a multi-sited facility. Full training in RPL will be given where necessary.

These are senior positions and carry all the usual benefits including relocation costs to this very attractive part of rural Suffolk.

To apply in the first instance please telephone for an application form to:
The Personnel Department,
Project Office Furniture Ltd.,
Hamlet Green, Haverhill,
Suffolk, CB9 8QJ

PROJECT

Libra
COMPUTER SYSTEMS

SYSTEMS ANALYSTS

Circa £11 - 14K p.a. plus car
ESSEX

The Job

To work on the production and installation of software and turnkey systems specifically developed for the publishing industry. Duties will include client liaison, production of proposals, analysis and systems development from feasibility to implementation.

The Company

Libra have an excellent reputation for the quality of their systems and a progressive growth record throughout their five year history. The current recruitment campaign is part of a planned expansion during 1984 both in the UK and their new USA subsidiary.

The Requirement

It is imperative that candidates should have had experience of implementing at least one major system from start to finish. In addition they should have a flexible approach to their work, an outgoing personality and the necessary commercial awareness to understand client requirements fully. Previous experience in either the publishing industry and/or DEC equipment would be an asset but is not regarded as essential.

The Rewards

The successful candidates will be encouraged to develop their careers and skills in a challenging and stimulating environment. The starting salary will be in the region of £11,000 to £14,000 p.a. and a company car is provided.

Location

Libra are currently based in Billericay, Essex but are in the process of negotiating for larger offices in Chelmsford. This obviously presents a good opportunity for someone who is currently commuting into London to be based nearer to home. There may be opportunities to travel to the USA.

Further Information

In the first instance please contact Chris Morrow of Total Selection who have been retained to advise on the appointments.

Programming Team Leader

IBM environment

Package to
£13,500

West Yorkshire

John Mercer 1/770

Our client is a profitable UK owned retail and finance organisation with a turnover of £100 million which is served by a Central Management Service function based in Leeds. The installed equipment includes a 4 mega-byte IBM 3031 and an 8 mega-byte IBM 4341/2 running under VM/SP with DOS/VSE, CICS and TOTAL, supporting a national on-line communications network. A planned migration to MVS will commence in the near future.

Senior management is committed to major new developments in support of several areas including Distribution and Merchandising, Finance and Credit Card, Electronic POS and Personal Computing.

The successful candidate will be responsible for a team of programmers and should have some knowledge of fourth generation languages and modern program development aids. Ideally, you should have at least 5 years' programming experience and now be seeking a management appointment in which comprehensive training will be provided. Of paramount importance however, will be the applicant's knowledge of the IBM programming environment including COBOL and CICS etc. An appreciation of TOTAL and MANTIS would prove advantageous.

A generous remuneration package together with the usual big company benefits is offered for this significant career opportunity. Relocation expenses will be reimbursed where appropriate.

To apply, please write or telephone for an application form to John Mercer, at the address below, quoting reference NG 86. Applications, which will be treated in the strictest confidence, are invited from either sex.

Data General Software Specialists

Manchester to £10,500

Our client, a leading systems house in its field, wishes to recruit a number of staff with skills in Data General systems to develop and support software for current and future systems including CS, MV, and CEO.

Technical Support Specialist

The candidate is required to provide support in the installed base of fifty clients who will probably double over the next year. You should have a good understanding of operating systems, particularly RDOS and possibly AOS and ICOS, and an understanding of COBOL programming particularly as applied to Data General CS and MV range machines. A preparedness to travel and a professional and articulate manner are required as you will be providing customer liaison and some in-house training. You must be prepared to keep up with the latest D.G. systems developments, particularly CEO.

Senior Programmer/Programmer (COBOL)

A number of staff with strong COBOL programming skills on D.G., C.S., or other small business systems are required to work mainly on in-house development projects with some visits to clients' premises. For the more senior position you would be prepared to work in a team leader's capacity and have had experience of carrying a project from feasibility through to implementation.

For further details please ring Brian Harris on (0270) 627206 during the day or (0270) 629454 evenings and weekends.

SYSTEMS & PROGRAMMING

MVS SYSTEMS PROGRAMMERS
CITY AND HOME COUNTIES £14,000-£20,000
We have a number of clients in London and the Home Counties who are currently seeking MVS Systems Programmers. Experience required includes IMS, ACF/VTAM, SNA, NCCP, IDMS, CICS and TSO. Contact us now for further details of these positions. Ref: M/744

ICL PROGRAMMERS & SYSTEMS ANALYSTS
C. LONDON to £13,000
Our client wishes to recruit several ICL professionals at all levels to embark on a major development project. Projects include Realtime Database. Applicants with VME/88 experience are preferred. Ref: T2240

PROGRAMMERS
ANALYST/PROGRAMMERS
LONDON AND HOME COUNTIES to £12,500 + CAR
Well-established software house seeks to recruit several COBOL professionals to work on a variety of projects at their prestigious client sites. Excellent rewards and career prospects. Ref: T2313

SYSTEMS ANALYSTS
SURREY c.£12,000
We have several vacancies for Systems Analysts within the Surrey area. All positions offer excellent salaries, benefits and genuine career prospects. Applicants should have a minimum of two years' experience, preferably gained within a mainframe environment. Please for further details or send your C.V. to the address below, quoting the reference number. Ref: T/744

IBM COBOL ANALYST/PROGRAMMERS
ESSEX £9,000-£11,000
Due to further computerisation of financial systems, this Essex-based manufacturing concern has a requirement for IBM Analyst/Programmers. Applicants should possess 18 months' COBOL experience. Training as required in CICS, DL1 and Analysis. Excellent career prospects and occasional overseas travel. Ref: M2100

IBM PROGRAMMERS
CITY £8,500-£11,000
International insurance company embarking on major development projects requires two IBM COBOL Programmers with two years' experience using VM/CMS or CICS. Ideal opportunity to gain financial systems expertise in a purely development role. Ref: M2356

Lecturer Computer Hardware

A computer professional is required as a hardware lecturer in our expanding Technical Training Centre at Bracknell.

The person appointed will be required to contribute to the teaching of microcomputer technology and real-time computer architecture as applied to the Company's wide range of military-computer products.

Applicants should possess relevant professional qualifications and/or experience. The possession

of a teaching qualification would be an advantage but is not essential as guidance in lecturing techniques would be provided.

As you would expect of a major international company, we are offering attractive salary and benefits packages, which include assistance with relocation where appropriate.

If you are interested please contact the Recruitment Section at Ferranti Computer Systems Ltd, Western Road, Bracknell, Berks. RG12 1RA. Tel: Bracknell 483232, ext. 3471. Please quote ref. B/1063/CW.

ANALYSTS/ PROGRAMMERS

Russell Hobbs, a member of the TI Group, and a brand leader in the U.K. small appliance industry are seeking two experienced Analysts/Programmers to join its newly formed D.P. department.

Operating a variety of business systems on a Sperry System 80 machine, the ideal candidates will have 3 to 4 years COBOL programming experience gained in a commercial environment. Knowledge of any of the following will be an additional advantage: Sperry OS/3, Assembler, BASIC, FILETAB, TOTAL, or TIP.

This is an ideal opportunity for energetic individuals who can meet the challenge of taking complete responsibility for projects from specification to implementation and support.

These are important appointments with considerable growth potential and the company therefore offers a highly competitive salary together with the normal benefits associated with a large Group. Relocation assistance will be given.

Applications in writing to:

J. Jones, Personnel Department,
TI Russell Hobbs Limited,
P.O. Box 1, Blythe Bridge,
Stoke-on-Trent ST11 9LN.

Russell Hobbs

PRODUCTION MANAGER MAJOR SERVICE BUREAU

Eurocom Data Limited, Europe's leading COM (Computer Output to Microfilm) bureau, and a wholly owned subsidiary of the National Westminster Bank Plc, have a vacancy for a Production Manager at their City of London site.

The job requires a high degree of man management skills allied to an extensive working knowledge of the Service Bureau industry, either gained in COM or a Computer Service Bureau environment. We operate a 24 hour, three shift system producing high quality output to critical time scales. It is, therefore, essential that the person appointed will be flexible in terms of time utilisation, and also in their total commitment to ensuring an efficient, smooth running operation.

With the considerable Research and Development expenditure within the Eurocom Group, this job will offer the challenges required by a forward looking individual; and adaptability to technological change is a pre-requisite.

Salary will be commensurate with the importance placed on this position and benefits are those associated with a major Banking group.

Applications in writing, enclosing a current C.V., should be addressed to: Mr. D. J. Haynes, Southern Region Manager, Eurocom Data Limited, 86-90 St. John Street, London EC1M 4PR.

Recruitment Consultants

... a bright start to 1984

Dorset Coast

£9-£16000

Look back at 1983 and ask yourself the following questions. Have you made enough progress, considering your abilities? Have you been held back at all by Internal politics, lack of promotion prospects or projects which, although interesting, are not "leading edge" technology? Now ask (and answer honestly) whether you think there may be, somewhere, a better opportunity and career.

R E A L - T I M E

If you graduated in 1982 or before and can offer one or more of the following then you will be of interest to our client.

- * CORAL, PASCAL or Similar
- * Real-Time C3 Projects
- * Digital Design (CMOS, TTL etc)
- * Real-Time ASSEMBLER on Minis or Micros

25 South Street, Reading, Berkshire RG1 4QU
Telephone: Reading (0734) 591151 24 hours

Consider the following:-

Myriad are recruiting on behalf of an organisation which is primarily concerned with the development of Command, Control and Communications Systems for Defence purposes. They are certainly successful, and expanding, and can offer a range of interesting project work. Salaries are extremely competitive, overtime is paid, and various fringe benefits apply.

They are located in a pleasant part of the South Coast near Bournemouth in Dorset, an area in which a high quality of life is experienced, being on the Coast and so close to the New Forest.

Finally, ask yourself if you have anything to lose by contacting Myriad to find out more, and if you are honest the answer will be "No".

Just complete and return the FREEPOST coupon (no stamp required), or give Myriad a call on Reading (0734) 591151 for further information on our client company and the opportunities they offer. Give yourself a head start for 1984.

ANALYSTS/DESIGNERS

Get more out of Life with Abbey Life.

If you promised yourself a better life in 1984, start the year as you'd like to go on.

Join a progressive, forward looking company that will put more life into your career and more style into your life.

As a member of one of our young, dynamic Systems Development Teams, you'll at last be working on interesting projects while, at the same time, you reap the benefits of our continued expansion.

As for lifestyle, you'll have all the advantages of living and working in a pleasant coastal town

within a stone's throw of just about every amenity you could wish for. It'll be improved, too, by a salary of up to £14,000 p.a., a subsidised mortgage scheme, free life assurance, non-contributory pension scheme etc., etc.

All we ask from you is a degree or at least 2 'A' levels, five years commercial experience including two years COBOL programming and the will to succeed.

So for a really happy new year call or write to Val Hastrop or Alison Davies, S. & D.P. Technical Recruitment, for an application form.

The address is Abbey Life Assurance Co. Ltd., Abbey Life House, 80 Holden Road, Bournemouth, BH8 8AL.

THORN EMI Computer Software

Altergo Products Division

Software Development
Team Leader to £16,200 + car
Systems Engineers to £16,200
Aylesbury and Stafford

BECOME THE COMPLETE IBM SYSTEMS PROGRAMMER

The development of software products for IBM mainframes offers the systems programmer the opportunity to exercise their creative/design skills and sharpen their technical knowledge through exposure to the full range of systems software available in this marketplace.

Altergo Products is the IBM systems software development arm of Thorn EMI Information Technology Division. This Division covers a wide spread of activities in advanced hardware and software development and its companies include Software Sciences, Datasave and DataTech. A considerable part of the investment plans of Thorn EMI are being directed towards the Information Technology Division and this has resulted in a major expansion of the Altergo Products development centres at Aylesbury and Stafford.

Successful applicants will work on both the creation of new 'state of the art' 4th generation products for both IBM mainframes and P.C.'s, and the enhancement of existing products. These products cover areas such as t.p. monitors, program development tools, systems efficiency aids, user query systems etc.

Development staff will enjoy the use of a dedicated IBM mainframe computer and work with other high calibre software specialists in a stimulating team environment where the common objective is technical excellence.

Adaptability and creativity are the key qualities we need for positions which will introduce you to

every aspect of the software business. Applicants must have Assembler experience in an IBM (OS or DOS) mainframe environment and specific experience should include one or more of the following:-

- DOS or OS system programming or teleprocessing systems support
- CICS/VS, IMS/VS, or SHADOW II
- DL/I, TOTAL or IMS
- COBOL or PL/I
- Telecommunications with BTAM, TCAM or VTAM.

In return for these skills you will be provided with a unique opportunity to become the complete IBM Systems Programmer conversant with the full range of systems software for IBM mainframes.

Altergo Products continuing commitment to research and development together with the substantial backing of Thorn EMI ensures that career prospects will be excellent and could be into management, product marketing, or technical/sales support.

In addition to an excellent salary, you can expect all the benefits of a major organisation including generous relocation assistance making the overall package extremely attractive.

For further details please telephone Andrew Cousins on 0734 595346 at our Reading office or write enclosing a full c.v. to the address below.

Interviews will be held in London, Reading, Aylesbury or Stafford.

SENIOR SYSTEMS OPPORTUNITIES

Our Client, Univesel (CMS) Ltd., is a small but well-established Software House with teams specialising in the clothing and textile industry and wine and spirits industry. Due to increased demand for their services they now require additional senior DP professionals to join them at both their Windsor and Leicester based offices.

SYSTEMS SUPPORT ANALYST c.£13,000 + CAR

The essential quality for this position is the ability to support existing installations and new sites in both a formal training role and informal support role. Applicants should have experience of presenting training programmes and providing a high level of documentation for courses and customer support. Any exposure to Burroughs small system would be of benefit.

SYSTEMS ANALYSTS to £15,000 + CAR

Candidates should have a sound DP background with experience of designing commercial real time systems on mini or microcomputers. They must also have seen at least one project through from feasibility study to full systems implementation. As there will be a good deal of customer contact and support, applicants must be professional in both appearance and attitude.

The Company has now reached a crucial stage with its planned expansion and is dedicated to recruit the right individuals to join their young and dynamic teams. If you can meet the above requirements and would enjoy working in a challenging and rewarding environment, contact Mike Hermer at Apex 01-404 4821 or Terry Forsey at Univesel (CMS) Ltd. Windsor (07535) 54587 for further details.

Cobol Programmer £6.5-7k This will be music to your ears...

Opportunities in the Record business are exciting and rewarding - after all, it's one of the most dynamic industries in the world. Right now, you'll be pleased to hear you have the chance to share that scope by making a key contribution to our success at RCA.

Data Processing has a vital role to play in our activities, supporting a highly complex national operation. At our installation in West Bromwich, we are primed to provide this expertise. Here we operate 3 D.G. MV8000s and 2 PDP 11/34s which will shortly be linked to our IBM 3081 in Sunbury, Middlesex, with online batch and database systems meeting applications as diverse as accounts, video rentals, order processing and royalties.

If you're young, bright and determined, becoming part of our programming team is an excellent career move. You'll have a visible role to play, some outstanding facilities and real potential for development.

Bring us at least 18 months recent D.G. or IBM COBOL programming experience and there's also a generous remuneration package to look forward to.

If you like the sound of our prospects, telephone Loraine Dimmock, on 021-525 6888 for an application form.

CICS Systems Programmer

Home Counties c.£2250/month

We are seeking a Systems Programmer with good knowledge of CICS extensions (tables, etc.) and preferably sufficient knowledge of CICS internals to carry out debugging and troubleshooting duties. The successful applicant could have either OS or DOS experience, and will undertake sole responsibility for CICS software on the client's DOS/VSE system. Tasks will include day to day maintenance, problem determination, upgrading from Rel. 1.5 to 1.6 and support to application programming teams. The assignment is initially for 3-6 months, with the possibility of extensions.

MVS & ACF/VTAM Support

Holland c.£2500/month

We require 2 Systems Programmers to join a team working in a pleasant part of the Netherlands. The installation comprises a multi-cpu production configuration running MVS SP 1.3 with JES2, TSO/SPF, VSPC, CICS and ACF/VTAM/NCP Rel. 3, plus a test machine running VM/CMS. One person will be responsible primarily for MVS support, the other for the network, with duties including generation, maintenance, tuning and debugging. Applicants should have upwards of 3 years experience in a similar software environment to the above. Both assignments are open ended with an initial commitment of 6 months.

MVS Systems Programmer

Home Counties c.£2350/month

We need an additional Systems Programmer to join our Client's system support team on a 6 monthly renewable contract basis. The current configuration consists of multiple 4341's running MVS/SP1.3, JES2, CICS, IMS DB, RACF and a variety of other Program Products. A major CPU upgrade is planned for early in 1984. Applicants should have as a minimum, a good basic grounding in MVS, together with knowledge of at least one of the other products above. The successful candidate will start the assignment in December or January.

CDS is an Anglo-Swiss Consultancy specialising in systems programming and DB/DC application development. For further details of the above positions or for an informal discussion on future prospects or UK assignments, please contact Mike Shaw at our UK office Tel. 0276 651261 or through our answering service on 0276 681266 during evening/weekends.

Real Time Software Specialists

Farnborough, Hants. To £13K

Real Time Developments is an independent systems house specialising in high-quality real-time software systems. We have an immediate requirement for a number of real-time software specialists to enable us to expand in line with our plans for 1984. The people we are looking for are preferably graduates with two or more years experience in any real-time applications. Experience should have been gained on minis or micros, with knowledge of both assembler and high-level languages.

Apart from a highly competitive salary, benefits include BUPA, health assurance and paid overtime. The company offers ample scope for genuine career advancement, with employees being encouraged to assume responsibility as soon as they are ready for it.

1984 holds great promise for RTD; why not be part of our success story? For more details contact Geoff Burnes on Farnborough (0252) 546213 or write to

Real Time Developments Ltd.,
Lynchford House, Lynchford Lane,
Farnborough, Hampshire, GU14 6JA.

The IBM SYSTEM 34/36/38 Recruitment Specialists

IBM is an International Company providing a range of services to the petroleum industry to aid in the drilling, completion and production of oil-wells. Part of a multi-national organisation, their expertise is used in over 75 countries to locate and produce oil on and off-shore. A Research centre is now being established in Cambridge including a new IBM SYS/36 installation.

THE VACANCY: Needs the talents of a multi-disciplined professional who would like to use their ability in developing financial and accounting systems. The successful applicant will be responsible for the day to day running of the installation within a high level research team environment. The position requires total dedication, versatility and is an exceptional opportunity to the career professional.

THE BENEFIT: Within the group both short term and long term are excellent with very good promotional prospects. Every chance will be given to develop your technical skills enabling you to advance your career.

PLEASE APPLY: Please call Richard Milsum on 01-354 1055 during office hours or on 01-958 2553 during evenings and weekends. Response will be treated with strict confidence.

Rare Opportunities

Market Leader

Major Manufacturer

Rapidly Expanding ...

"Dealer Sales - Software Packages" Midlands, North and London

Circa £14,000 Base - O.Q.E. circa £25,000 + car

All these "buzzwords" are used to describe numerous opportunities for ambitious sales executives wanting to earn 6 figure sums, promises of presidency within 12 months, or for selling a unique product to "special" clients who all have a stake in the Bank of England.

These days few opportunities are really as exciting as they are portrayed in the press, however, we feel that we can offer something rather different.

Our parent company is involved in an array of high technology industries managed by a young and entrepreneurial management team committed to the groups diversification and continued success in 1984.

As part of its computer division (which in itself manufactures and markets both micro computer hardware and software) we are seeking to identify a number of high level computer sales executives with previous backgrounds in software or services to develop and manage our distributor network across the U.K.

We can offer the "real" opportunity to join a growing company which has the benefit of considerable financial investment, an excellent range of products and above all the chance to develop those "management" skills, and grow with the company. We feel our approach is unusual and our attitudes to the market flexible and refreshing within an extremely competitive industry.

If you think you fit into the above criteria and find this advertisement interesting then please do not hesitate to contact our recruitment adviser Paul Pearce on 021-643 8501 now to find out more or alternatively, mail your c.v. to him at the Birmingham address.

CONSULTANCY LONDON

£14,000-£22,000 + CAR

A leading international management consultancy has openings for top-calibre D.P. professionals who have either excellent all-round commercial applications experience, or specialised experience in areas such as communications, database, etc.

You will need to meet all the following requirements:

- Good degree
- Excellent inter-personal skills and professional manner
- 25-32 years old
- Proven track record, either in a variety of application areas or in specialised areas as above

You will mainly be involved in pure consultancy, but also in project implementation and management.

This is seen as a logical career step for high-fliers who have proved themselves in a user environment and are ready to move forward to top-class consultancy.

For further information, please contact MARK IRENS quoting reference CW1201/1.

Telecommunications Engineer

c£8,500

Bristol area

Our Client, a major subsidiary of a multi-national Group, is in the process of developing a nationwide interactive network of Hewlett Packard 3000 minis, using CASE DCX equipment.

This has created a requirement for an additional person who, reporting to the Telecommunications Co-ordinator, will assist in the planning, installation and day to day running of the Company's telecommunications facilities.

Our Client is seeking an ambitious Telecommunications Engineer with at least six months practical involvement in data communications, and the ability to isolate problems, either personally, or by calling in the relevant engineering support.

This newly created, career position will suit someone with a practical bias and the ability to generate positive relationships with users.

This is an excellent opportunity for a young and ambitious person who enjoys variety, challenge and travel and is keen to take advantage of the excellent career prospects available within this growing and highly profitable Organisation.

Accurate driving licence is essential, as a company car will be available for travel to remote sites.

Starting salary is negotiable in the region of £8,500.

If you possess the necessary level of experience and are looking for an interesting future, contact Ian Payne on 021-236 3781 for further information and application form. Alternatively, send him a brief Resume of your career to date at the Birmingham office address which is shown below.

Are you
good
enough
for the
market-
leaders?

Contract Sales Executives • Recruitment Consultants

The VLI Group enters 1984 with a policy of controlled expansion, having achieved a turnover of £12m in 1983. We are already doing around twice as much business as our nearest competitors and are determined to preserve and extend our market share. We have current vacancies in Cheadle, Birmingham, London and Croydon. Our earnings packages must be the most generous in the industry - but only professional sales people who have proved their success will be considered.

If you're good enough to join the market-leaders ring:-

Roger Evans - London Vacancies - 01-836 8411 (work) or 01-449 6838 (home)

Lee Walkinshaw - other locations - 01-680 4013 (work) or 01-821 6272 (home)

VLI Computer People

INTERCOM DATA SYSTEMS

INTERCOM DATA SYSTEMS were formed to provide a dedicated System House solution to the communication and Information Technology requirements of major companies, banks and Government organisations. With a comprehensive client list, an excellent reputation and a full range of products and services we are in the forefront of technology and now require key staff to match.

Software Engineers and Programmers £10,000-£14,000

Experienced people of all levels in VAX, VMS, MACRO, RSX11M, FORTRAN, REALTIME are urgently needed to work on a variety of projects including VIDEOTEX and NETWORKS. We require competent skilled staff and are ready to convince them to join us. We have several inhouse VAX 11-50s and there are opportunities for travel and user contact.

Hardware and Communications Support £7,000-£9,500

Acting under our Hardware Manager in the installation and testing of new HARDWARE and SOFTWARE PACKAGES both inhouse and in our clients' premises. This position may be of interest to ENGINEERS or people with an ELECTRONICS background with a desire to move closer to software development. Work is varied and TRAINING will be provided as necessary. This is a real opportunity for applicants with aptitude and some experience, preferably on DEC and/or COMMUNICATIONS equipment.

Our working environment is superb with BRAND NEW PURPOSE BUILT offices in WOKING. Long term prospects are excellent and initiative and effort will be rewarded quickly with regular reviews and a policy for promotion based solely on merit.

Business Systems Analysts

to £14,000

N. Herts

Our Client is a multi-national Organisation and one of the largest Companies in its field worldwide, with assets in excess of £3,500m. The Company is currently working on its long-term systems strategy, and in doing so has established a requirement for a number of Business Systems Analysts who are able to demonstrate good business sense, an awareness of the real needs of users, the ability to balance conflicting priorities in a positive, tactful manner, and, at the more Senior level, sound Project Management skills. Reporting to the Project Manager, Business Systems Analysts will enjoy high levels of user contact in a professional and interesting environment, where the prime objective will be to devise practical solutions to business problems. An awareness of the implications and applications of computing will be a great advantage. The Company is moving further towards the widespread introduction of Personal Computing and distributed Word Processing and has created a corporate Data Model which defines data flows and functions within the business, using Yourdon Structured Analysis techniques. This will be used as a base for all future developments, ensuring product flexibility as well as facilitating integration of both clerical and computer procedures into one total system.

These challenging and involving positions will be of considerable interest to experienced Analysts, whether they be from a Business or D.P. background, who wish to become more actively concerned with the broader issues involved in applying modern technology to a progressive and well-resourced multi-national Company. Career prospects are good and advancement into a Senior role will only be governed by the effort and application of the individual concerned. Conditions of employment are excellent with modern and attractive working surroundings being supplemented by a low cost pension scheme with free life assurance, flexible working hours, four weeks annual holiday, free restaurant, an active sports and social club, full relocation assistance (including disturbance allowance and bridging loan if required) and a subsidised mortgage scheme after a qualifying period. Overall, an extremely attractive prospect for suitably experienced and ambitious Analysts seeking a positive career move. To apply, forward a concise CV to Ian Payne, Major Account Manager at the SCR Birmingham office or telephone 021-236 3761 for an application form. Initial interviews will be held in SCR Regional Offices during the latter part of this month.

TECHNICAL SPECIALIST HONEYWELL DPS 6 To £15,000 + CAR

Our Client is a well established Insurance company, part of a large British group. Their Data Processing department comprises 4 x DPS 6 Honeywell computers supporting a very large on-line underwriting/accounting system with over 100 TDS terminals.

They currently require a Technical Specialist whose responsibilities will include advising on hardware and software design for future extensive on-line projects and to co-ordinate the future growth with the efficient use of the current systems.

Applicants must have a sound DP background and possess extensive relevant experience.

In return our Client offers an excellent starting salary plus car and a superb benefits package which includes:

- ★ MORTGAGE SUBSIDY
- ★ MEAL ALLOWANCE
- ★ NON CONTRIBUTORY PENSION
- ★ FREE MEDICAL INSURANCE
- ★ 33 HOUR FLEXITIME WEEK
- ★ INSURANCE DISCOUNTS

If you are interested and would like further details please contact Mike Hermer. All replies will be treated in strict confidence.

SENIOR ANALYST/PROGRAMMER HP 3000 c£13,000

Our Client is a Central London based financial concern, part of a UK multinational group. They currently utilise an HP 3000/40 but will be upgrading shortly to a 3000/42. Due to expansion within their market they wish to appoint a Senior Analyst/Programmer to take responsibility for existing and future systems development.

Applicants, probably in their late 20's or early 30's, will have a sound background in COBOL with some exposure to systems analysis. Any knowledge of HP systems and software will be advantageous although not essential as management ability is the essential criteria. The successful candidate can expect a high degree of user contact and must therefore be an effective communicator at all levels.

In return our Client offers a generous starting salary with the possibility of a company car and a move into a management position at an early stage. If you are self motivated and looking for a challenge in an expanding environment, call Mike Hermer for further details.

Careful planning often makes the difference between the successful and the not so successful computer career. Prescott Computers understand this because we specialise in overseas computer recruitment, and the selection for an overseas post requires extra care by Prescott, employer and employee. We use the same principles of care whether UK only or overseas employment is involved.

We wish to interview: Programmers, Systems Analysts, Analyst/Programmers, Consultants and Sales People for a broad range of clients in England and overseas. Salaries range from:

£8,000 to £25,000 p.a.

If you are interested, why not telephone us on 01-836 8885/6 for an informal discussion. Alternatively if you prefer write to:

Prescot Computers Ltd
11/13 Broad Court, Covent Garden, London WC2 5QN

INDUSTRIAL SOFTWARE SPECIALISTS (DEC and IBM)

The Organization for Industrial Research (OIR) is seeking high level software professionals to introduce new technology to manufacturing companies. The successful applicants will be trained in the United States and will work out of the Birmingham, dealing with companies in the UK and throughout Europe. They will work with customer management and MIS personnel to develop specifications, implement and support computer software systems which help improve manufacturing productivity.

WHAT IS OIR?

OIR is a rapidly growing American company which is a world leader in the development and implementation of Computer Aided Design and Manufacturing (CAD/CAM) systems for applications such as computer assisted process planning, design and manufacturing standardisation. It is now expanding its activities in Europe.

REQUIREMENTS

- Minimum of three years industrial experience in software systems or support in one or more of the following environments:
 - * DEC: VAX VMS, PDP 11 RSX-11M
 - * IBM: CICS, CMS, IMS
- Degree level education
- Must be skilled in communications with manufacturing management, MIS personnel, designers and industrial engineers
- Working language will be English. French and/or German are also desirable
- Must be willing to travel extensively outside the UK
- Must be a 'self-starter' capable of working well without close supervision

An attractive benefit package is provided with salary commensurate with experience.

Interviews will be held week commencing 30th January 1984.

To apply, please send a detailed CV, quoting ref CW/783 to our consultant: Ray Diamond, Gorrards Recruitment Service, 37 Chapel Side, Moscow Road, London W2.

OIR The Organization
for Industrial Research

FREELANCE PERSONNEL

1984 Must be the Year of Opportunity

Our clients in the worlds of banking, insurance and finance are asking us for the services of contract systems and programming personnel to supplement their project teams in 1984.

All the vacancies are in London or the Home Counties, the contract periods are variable from three months upwards and the rates are negotiable dependent upon the level of job and the skills you can offer.

Thus we would very much like to hear from you if you are available either now or at some point in the next 3 months and can provide any of the following expertise: -

As a programmer or senior programmer
IBM, IMS DB/DC, PL/1 and JSP
IBM, IMS DB/DC and COBOL
IBM, CICS and PL/1 or COBOL
NCR, VRX, Tranpro and COBOL or NEAT/3
NCR, IMOS or IRX and COBOL
Univac, DMS 1100 and COBOL
Unix and 'C'

As a systems programmer
IBM, JES 3 internals

As an analyst or senior analyst
Strong banking applications knowledge gained in an IBM or NCR environment

Ref no 151A

Senior Data Processor

Racal Energy Resources Limited is the parent company of the market leaders providing world wide survey services to the offshore and maritime industries. Various shipborne data logging and control systems are supported, in both the pre and post operational processing phases, by shore based Data Centres at the regional headquarters around the world.

A vacancy for an experienced data processor exists at the Great Yarmouth Data Centre. This centre is equipped with a complex hardware configuration based upon a G.A. 16481 mini-computer. Tapes, disks, plotters and interactive terminals are supported.

The person appointed to fill this vacancy will, after a period of familiarisation, be placed in charge of all computer room activities. He/she will thus be responsible for carrying out the instructions of the departments business manager. This appointment will be made on the basis of knowledge of, and experience in stored programme computer practice as applied in

surveying and cartographic work. We offer good salaries and a benefits package which includes pension scheme and 5 weeks annual holiday.

Interested applicants are invited to write, giving details of work experience, qualifications and salary progression to:

Paul Winterbottom, Personnel Manager, Racal Energy Resources Limited, Survey House, Kingston Road, Leatherhead, Surrey.

Racal's people are Racal's success

RACAL

We rank among the leading producers and wholesalers of fashionable sportswear in both Europe and the U.S.A.

We are looking for a top IBM S/38 programmer/analyst. Knowledge of RPG III and a complete understanding of the data-base concept are essential.

We use the IBM/38 Model 7-4MB, currently with 45 terminals. In addition we are working towards for decentralized order processing with micro-computers.

You may also have to work in the 7 European countries, where we support our sister concerns and in Hong-kong and San Francisco with whom we also communicate with help of a Series/1.

With us you have the advantages of a permanent job and also a demanding job in varied and complex areas.

If you want to work in a very friendly atmosphere and think that you are the right person for this job, please get in touch with our Mr. Virk.

Esprit, Halskestraße 42-46, D-4030 Ratingen 1-Tiefenbroich, Tel. 02102/49 2127.

ESPRIT

UNIX & "C" PERSONNEL

Age: Open **£7,500-£12,000**
Due to a major Unix development, opportunities exist in a fast-moving and high-powered BANKING environment for experienced "C" Programmers at various levels. Prospects are excellent but full commitment is required. Graduates with "C" experience will be considered. Preferential mortgage possible.

IBM SYSTEM/34

MULTIMILLION POUND BANKING AND INVESTMENT GROUP

Requires a very good Analyst/Programmer in the Isle of Man to take charge of System/34 installation and to develop both banking and property management systems.

Preference will be given to individuals with at least three years' relevant System/34 experience and the ideal candidate should have experience of working in a banking environment.

Salary and employment conditions will be above average and will reflect the importance placed on having a motivated and capable person in this important job.

Replies to Box No. 1283

THE UNIVERSITY OF SUSSEX RESEARCH FELLOW IN SPEECH PROCESSING

Applications are invited for a post-doctoral research fellow to work on an SERC-supported project investigating methods for extracting phonetically useful parameters from speech. The project will apply computational ideas from visual scene analysis to auditory information processing, and will also investigate experimentally early stages in the auditory analysis of speech. Applicants should have research experience either in digital signal processing, speech processing, hearing or speech. The project will use the laboratory's VAX-11/780 computer. The appointment will be for up to three years from January 1, 1984 or as soon as possible thereafter, and will be initially between £7,190-£7,230 per annum on the research and analogous IA scale (£7,190-£12,115 per annum). Further information can be obtained from: Dr C.J. Darwin, Laboratory of Experimental Psychology, University of Sussex, Falmer, Brighton BN1 9QG. 0273 606795 Ext 941. (7088)

GRAMPIAN REGIONAL COUNCIL

DEPUTY DIRECTOR - COMPUTER SERVICES

£15837 to £17082

New senior post, based in Aberdeen, following agreement by the Regional Council on a major planned expansion of Information Processing. Ref: 3/84CV.

Currently using ICL 2960 and 2966 mainframe computers, the Department of Computer Services is actively engaged in provision of extended facilities for a variety of technical, financial and other user systems, and is advising on the introduction of word processors and specific microprocessors. Existing mainframe and data entry facilities will shortly require review and replacement.

Candidates must have substantial and wide ranging experience of mainframe systems at a management level, and an innovative approach to development of all methods of information processing. Full removal expenses. Assistance in certain cases towards legal costs. Informal enquiries will be welcomed by Mr R. E. Ellis, Director of Computer Services (Tel 0224 682222 ext 2085, asking to reverse the charges).

Applications, in TYPEO FORM, giving full details of relevant qualifications, age, experience, present employment and salary to: Selver with names and addresses of 2 referees should be lodged with Chief of Manpower Services, Woodhill House, Aberdeen AB9 2LU (from whom further details are available) NOT LATER THAN 30 January. (7128)

SYSTEM/34 & /36

ANALYST/PROGRAMMERS

RSB is a specialist micro and mini software house with a high reputation for good quality commercial software on IBM PC, 23, 34 and 36. We have a number of System/34 and /36 contracts under development some of which include networked PC communications. We are looking for self-motivated people who have most of the skills listed below:

- ★ Solid background in S/34 and GSD.
- ★ Experience of commercial systems.
- ★ Minimum of two years' RPG II programming.
- ★ Systems Design.
- ★ Software house exposure would be an advantage.

We have vacancies for analyst and programmers to work for specific customers as well as in the product development team. Salaries will be in line with experience and the package of benefits could include a company car. Interested?

Please call Glyn Dawley or Eric Dickinson for an interview on (01) 843 1922

Contracts in the North

P-E Computer Services Limited, a long established software house, opened a northern regional office in Manchester in 1980.

Due to the continued success of this office we have now moved to much larger premises just to the south of the city.

We have for many years supplemented our own staff resources with freelance computer professionals and are currently planning our resources allocation for contracts starting early in 1984. All grades of staff are required to work both in the north and overseas.

Whether you are available now, in the near future, or are just considering freelance work for the first time discover P-E's approach to freelance employment by telephoning or writing to Peter Moore at the address below.

REAL TIME SPECIALISTS

**Industrial - Scientific -
Defence - Technical**
£8K - £25K

The Good News Is
The ever increasing uses to which the computer can be applied, never ceases to amaze. We have clients in London, Home Counties and indeed nationwide who are active in so many exciting yet diverse fields of computing it makes specialist knowledge essential and highly sought after.

The Bad News Is
We haven't nearly enough good people to satisfy the needs of those clients who are urgently seeking:
Programmers/Analysts, Software Engineers/Designers, Project Leaders/Managers, Consultants, and Electronics Engineers. We don't have room to mention all the areas of applications but some of them are as follows:

Communications—Data/Tele—Voice Recognition—Message/Packet Switching—LANs—Protocols, Industrial Process Control—Data Acquisition—Instrumentation—Plant Monitoring, M.O.D. Systems—Radar—Navigation Systems—Command & Control—C3 and C31 systems—Electronic Warfare—Man Machine Interfaces, Office Automation, Information Technology, E.P.O.S. systems, Software Tools, Operating Systems, Artificial Intelligence Systems, Expert Systems, Robotics, CAD/CAM Systems, Graphics, Image/Signal Processing. You need in-depth specialist experience of such systems as: DEC PDP-11, VAX, Tandem, Argus, Hewlett Packard, Intel, Motorola etc., with relevant operating systems, UNIX would be most desirable; and have used languages such as: PASCAL, FORTRAN, COBOL, MASCOT, ADA and ASSEMBLER. You need upwards of 2 years experience—got that, then your next move is to pick up the telephone, dial 01-836 9719, any hour of the 24 (week-ends too) and ask for Beryl McLaren, you'll get a personal reply, not a recorded message.

01-836 9719

Technical automation jobs in Holland and West-Germany

BSO/Automation Technology is a software house engaged mainly in the fields of real-time process control and monitoring systems, simulation techniques, data communications, computer networks, distributed systems, computer graphics and compiler construction. Our clients range from large international organizations such as the European Space Agency to small companies using micro-processors for the first time. Our work consists of projects (both in-house and on clients premises) and technical and managerial consultancy.

BSO/AT has 50 employees half of whom are English, and is part of the BSO-group (270 employees), one of the largest in the Netherlands. Vacancies range from:

programmer to systems designer
(to £15,000 and car) (to £18,000 and car)

We are looking for people with 3 to 7 years experience in the design and implementation of real-time industrial or scientific systems on microcomputer or microprocessor systems. Preference will be given to applicants with a good knowledge of one or more assembler languages and at least one of the following high level languages: Pascal, RTL/2, Coral 66, PL/M, Fortran. Applicants who can show in-depth experience of a structured programming methodology will also be given preference.

Applications plus CV as well as requests for information can be directed to our UK representative, Yvonne Waddell, address: BSO/UK, Heathlands, Rockfield Road, Oxford RH9 0EJ, Surrey, telephone Oxford (08833) 6253 (day and evening). The contact person in Holland is Robbert J. Scheekamp, personnel manager.

Senior Programmers
to £13,000 p.a. +

**Senior Programmer /
Analysts**
to £15,000 p.a. +

There is a new career waiting for you in the world of finance.

Our clients - principally major City Institutions - have inundated us with requirements for development personnel of every level, to strengthen their data processing departments in readiness for expensive new projects they have planned in 1984.

It is impossible to specify the precise nature of each vacancy in this advertisement; in certain cases, specific expertise is required but for several of the openings, our clients are simply looking for sound general programming ability and either experience of or on aptitude for analysis.

The requirements cover: -

IBM, IMS or CICS plus PL/1 or COBOL
IBM System 34 or System 38 plus RPG II or RPG III
DEC PDP 11/ under RSX plus BASIC or Series IV
NCR V-series or I-series plus COBOL or NEAT/3
Wang VS100 plus COBOL
Unix and 'C'

or

Any other mainframe or mini using COBOL, PL/1 or BASIC

With one year or more's experience of programming and a match with any of the above categories, we can assure you that your time will be well spent in contacting us. Naturally, your interest and details will be dealt with in the strictest of confidence.

Telephone Lynn Roylance for further information or send your CV to the Freepost address below for immediate consideration.

PASCAL PROGRAMMER

£7,000 - £9,000 p.a.
CITY OF LONDON

Our clients are a small independent software house who have been established for five years. They have an excellent reputation for the quality of their work and due to an increase in their client base they are seeking to employ an additional programmer with PASCAL experience. The successful candidate will work within a small team developing bespoke and package systems for the commercial market.

The company has a policy of promoting from within and this appointment represents an excellent opportunity for a keen individual to advance his/her career whilst making a real contribution to a variety of projects. Experience of BASIC would be an asset and candidates should have a minimum of one year's PASCAL programming experience.

For further information please contact Chris Morrow on 01-837 0451 who will be pleased to discuss the post in greater detail.

MVS SPECIALISTS for SYSTEMS SOFTWARE DEVELOPMENT & SUPPORT

Surrey

to £20K + car

MACRO 4 has been originating and marketing systems software to DCS(VSE) users with great success since 1968. We have our own 4341 dedicated to development and support of our products, which are marketed worldwide.

We are now entering the MVS market and require several experienced MVS Software Specialists to work initially on conversion and/or support of existing products, and subsequently on new products.

Prerequisites are a thorough knowledge of MVS structure (internal knowledge would be an advantage), ability to write Assembler and a high level of self motivation.

In return we offer an excellent salary, non-contributory pension scheme, free BUPA membership plus the normal range of benefits associated with a successful company.

Write or phone Phil Heseltine or Terry Kelly at

MACRO 4 LTD.

(7251)

Communications Designer

BERKSHIRE Up to £14,000

A major manufacturer of minicomputers is seeking Programmer/Designers to develop communications systems. The project involves support, design and development of X25 Level 2 software and LAN Link level software for Unix System III-based workstation.

Candidates should have practical experience of X25/HDLC or similar protocols. Additional experience of Pascal, C, Unix is highly desirable.

Successful candidates will gain valuable experience in the implementation of the lower four layers of the OSI model including Network definition and control.

CW 2/4

Florida

NETWORKS/X25 Up to \$50k

One of the world's most innovative producers of communications and information systems is currently seeking to recruit additional Comms experts to work at their laboratories in Florida.

The company is looking for experts with two main areas of expertise. Data communications specialists, requiring highly qualified candidates with experience of X25 and related protocols, package switching and network diagnostic equipment experience.

The second area calls for Network software specialists; at least two years' experience of VTAM, BTAM and NCP. Additional experience of a COMTEN or IBM 3705 hardware is desirable.

In addition to the technical skills to be gained, the company provides a comprehensive benefits and relocation package.

RECRUITMENT SERVICES
01-399 9183
Datamatics, Freepost, Surbiton, Surrey KT6 5BR

Communications Manager

BERKSHIRE Up to £18,000 + bonus + car

The Computer and Communications Manufacturers Business Section of a major systems house have created a new Account manager's position to assist in the development and management of this important business area.

This position calls for the combined ability of (A) selling/marketing the company's services and (B) a solid systems development background with more recent experience of communications systems, e.g. IBM Comins, ICL Comins, X25 and LANs. Finally, candidates should possess project management experience, preferably with some financial and contractual responsibilities.

This position offers the successful candidate the platform to assume further business responsibility in the future.

CW 2/3

Coral/Mascot

LONDON/SURREY Up to £15,000

A leading consultancy commanding large contracts with the MOD requires professional Programmers and Software Designers to work on Realtime systems. Candidates should have a degree plus experience of Coral and preferably Mascot. Experience of Context and VAX machines would be helpful.

Successful candidates may look forward to enhancing their careers within an organisation proud of its reputation for professionalism and career development.

CW 2/5

C³ Development

LONDON/HOME COUNTIES £16K + Package

One of Britain's leading information systems contractors is seeking consultants for research and development on major C³ projects.

Candidates should have a numerate science degree and have at least five years' experience in Defence Communications, working on large projects like Plamigan, BATES, etc. Candidates should have a thorough understanding of communications systems, analysis and design.

CW 2/6

DATAMATICS
RECRUITMENT SERVICES
01-399 9183

SYSTEMS ANALYSTS C. LONDON

To £13,000

This well known company is undergoing considerable expansion of its DP department and requires Analysts at various levels of experience. A minimum of one year's formal analysis gained in a commercial environment is required. Preference will be given to those with accounting application backgrounds. There will be a good deal of contact with management departments and candidates must therefore be professional in both appearance and attitude.

SYSTEMS MANAGERS H'WELL L6 + BCL

c.£11,000

Two clients seek good Analyst/Programmers who wish to move into managerial positions. Firstly a company based in N. London is shortly to install a BCL MOLECULAR 18 and requires a person with experience of ASSEMBLER or similar language. Secondly, a site based in Bucks. with a HONEYWELL L6 seeks either COBOL or SCREENWRITE experience. Applicants should be able to work on their own initiative and preferably have some client/user contact experience.

PROGRAMMERS MINI COMPUTERS

c.£8,500

A number of Clients currently require Programmers with a minimum of a year's experience in COBOL, FORTRAN or PASCAL. This will have been gained on any mini however special interest will be shown in those with knowledge of DEC VAX, PRIME, HP 1000 or GOULD SEL. Applicants should have a good educational background and be smart and ambitious. Most work will be in C. London with the occasional visit to client sites.

DEVELOPMENT DEC/COBOL

To £16,000

Continuing growth opens further S&P opportunities with this nationally renowned Middlesbrough company. Utilizing VAX and PDP equipment for their advanced on-line systems development they require Programmers or Analyst/Progs. with two to three years' COBOL preferably gained in a VAX environment. At Team Leader level they seek a Senior Analyst with proven project design through implementation experience and good DEC systems exposure. A comprehensive benefits package is offered, to include bonus, relocation and with many positions a company car.

ALL LEVELS ICL/VME

To £16,000

An expanding Essex based company, committed to major financial systems development on ICL 2900 VME systems is seeking experienced ICL people at all levels. Progs. and Analyst/Progs. should have 18 months or more COBOL, the latter with some formal analysis. Analysts and above will have at least two years' systems exposure. Excellent salaries and prospects are augmented by a generous benefits package which includes a good bonus scheme.

PROJECT MANAGERS COMMS/BANKING

To £18,000

Two City-based Clients with heavy international commitments require Project Managers in the Banking and Communication areas. They seek in depth experience in either application area with micro experience especially relevant for the Comms. position. Basic salaries will be greatly enhanced by valuable and extensive benefits packages.

ANALYST/PROGRAMMERS DATABASIC

£10,000

A rapidly expanding software house is currently recruiting Analyst/Programmers with a minimum of 18 months DATABASIC from a Prime or CMC environment. The client actively encourages employees to service customers in a consultancy role therefore applicants should be presentable, confident and have the ability to deal with first time users. The client can offer job satisfaction, regular salary reviews and intensive training.

ANALYST/PROGRAMMER RPGII/III

£10,500

An international bank has identified a requirement for an Analyst/Programmer with a solid GSO background. The bank is an established 35 year old but is quite prepared to consider two years' RPGII programming and will retrain to RPGIII. The department is fairly small and everyone is encouraged to have as much user contact as possible. As well as a good starting salary the client will offer a banking package to include a 5% mortgage.

PROGRAMMERS PL1

To £11,500

A company offering a range of financial services has several requirements for PL1 programmers. The minimum requirement is for 18 months PL1 in a commercial environment for the programming positions and up to four years' plus for the senior posts. Applicants should have good all round programming skills to include design, coding and implementation. Due to the size of the client there is a recognised career path which would lead through to systems if desired.

Automation Systems

CENTRAL LONDON £8-18k

The Industrial Group of a leading software company seek Junior Programmers up to Senior Consultants to assist in the immediate development of a number of new major contracts recently acquired.

Candidates suitable for the medium to senior levels should have significant experience in software design end/or project leading, particularly on projects using DEC and HP1000 machines. A minimum of four years' experience is sought in one of the following three areas: (1) Plant Control (warehousing, materials handling, process control), (2) Distributed Control (wide area networks, automated retailing systems), and (3) Software Technology (X25, ISO standards, Unix).

Programmers should have a degree plus a minimum of six months' experience. Project work will be as outlined above and candidates will ideally have worked on minicomputers, e.g. DEC, HP1000 and Gould SEL, using Pascal, Fortran and COBOL.

CW 2/7

Switzerland

TELECOMMUNICATIONS **ENGLISH SPEAKING**

An international telecommunications company in Switzerland is currently seeking Software Designers to develop TELETEXT applications based on Intel 8086s.

Candidates should have a Computer Science or similar degree plus two to three years' experience of microprocessors (ideally Intel), Assembler, and a high-level language (ideally C++). Experience in Realtime communications, ideally X25, is desirable.

Successful candidates may look forward to enhancing their career prospects, gaining valuable experience in an international environment.

Scientific Engineers

DORSET Up to £11,000

One of the country's leading software houses have recently opened an office in Dorset in order to service their local client base in the South-West of England.

In line with this expansion, our client currently needs a number of Engineers, from graduate up to experienced professionals, to assist them in their development projects.

Candidates should have a relevant degree together with one or more of the following skills: Fortran on ICL/IBM Scientific Applications, Z80, Unix, Operating Systems, Pascal, C++, C, Meagat, Context, VAX/VMS, Fortran and General Software/Scientific Applications experience.

Successful candidates will work in-house or within easy travelling distance of the office.

CW 2/8

Hardware/Software Engineers

BERKSHIRE Up to £12,000

The Industrial Systems Group of a major systems company have an urgent requirement for a number of additional Programmers and Engineers to work on the design and implementation of a wide variety of Realtime systems. Applications include flight navigation, CAD, robotics, materials handling, ATE, communications and networks.

Based on a degree background, candidates should have a minimum of one year's experience of mixed hardware/software applications. Languages should include at least one of the following: Assembler, Coral 86, Pascal, PLM, Fortran, C and Ada.

Successful candidates will enjoy demanding work involving finding hardware/software total solutions to a variety of applications.

CW 2/7

European Careers

HOLLAND £12.18K

The Dutch division of a leading software consultancy is currently seeking additional Software Analyst/Programmers to strengthen a number of project teams involving a variety of communications systems.

Technical skills cover Realtime software, air traffic control, networks, defence, petrochemical process control, DEC VAX, micro and Assembler.

In addition to the above technical experience, successful candidates must demonstrate a willingness to take project management and client liaison responsibilities.

This is an excellent opportunity to develop your career towards consultancy, combining high technology, European mobility, team leadership and project management.

Deputy DPM

Richmond-upon-Thames

£13,500+car

Our client is a manufacturing company within the light engineering industry, part of an international group which is itself a public company. Their very well-established DP department (small, friendly and closely-knit) already has a good reputation within the company, having successfully implemented both major and minor projects, which include the accounting functions and order-processing. They are currently undertaking Production Control/Inventory Management, which will be both on-line and Database.

The environment is:

- NCR 8555 • VRX COBOL
- TRANPRO • TOTAL

A very good knowledge and experience of this environment is essential as a major requirement for this appointment is the willingness to tackle day-to-day problems "hands-on". This is in addition to the full range of analytical and programming skills, from feasibility studies through to implementation, together with the personality to liaise with users at all levels, including Directors. Knowledge of NEAT/3 and OLCP would be very useful.

The company offers 5 weeks holiday, subsidised lunch and adequate parking facilities.

Please contact Joan Ainsworth on 01-681 8311 or write to her at Computer Search and Selection, Carolyn House, Dingwall Road, Croydon CR0 9XF.

Computer Search & Selection

Aluminium Bahrain (ALBA) is the major aluminium producer in the Arabian Gulf. Established in 1969, the company now employs some 2,000 local and expatriate staff. We now seek a:

Specialist in Process Automation

around £26,000 net of tax† BAHRAIN

The Smelter Reduction Department operates 608 electrolytic cells all of which are controlled by Modcomp IV computers.

The successful candidate will help ensure reliable operation of the present control system, plus implement improvements, by designing and writing software (Fortran/Assembler) based on established user requirements. He will also work with hardware maintenance groups to ensure high levels of reliability.

Extensive experience in on-line control systems is a requirement of the job. In addition, previous experience with Modcomp computers would be a distinct advantage, ideally in an Aluminium Smelter or similar industry.

Earnings, at present tax free and freely transferable, will be around £26,000 (calculated at current exchange rates) including allowances and end of contract bonuses. The position is offered on a 3 year fixed term contract basis - married or single status.

In addition, substantial benefits include: * 32 working days' annual leave plus 12 days' public holidays * rent free furnished air-conditioned bungalow * full recruitment and repatriation expenses * annual return air fares for employee and family * free education for children * free medical care and life assurance.

Bahrain is a stable country with a liberal government. English is widely spoken and the Company is experienced in the rapid and smooth entry of expatriate staff into the local community. Extensive sports and social facilities exist.

Please write with full details to: Mr. K. W. Rowe, Alba Smelter Services Limited, Standbrook House, 2-5 Old Bond Street, London W1X 3TB.

SOMETHING TO BUILD ON

UNIX: SOFTWARE TOOL DEVELOPMENT

THE CHALLENGE

is a vacuum. A vacuum soon to be filled with UNIX software technicians of the highest calibre joining a new company about to take the software tools market by storm. Have you got what it takes to be part of this new team? Can you work at the forefront of software technology to create the products on which the success of the company will be built?

The new company has the backing of one of the world's most successful high technology organisations. Major contributors to the development of computing, they are now entering the growing market for software products with a high level of investment in people and facilities to ensure success.

UNIX will be the first development area and we are looking for experienced software engineers with the knowledge and personality to make a positive contribution.

THE OPPORTUNITIES

PROJECT LEADER Circa £16,000pa
SOFTWARE DESIGNERS £12,000pa-£15,000pa
SOFTWARE PROGRAMMERS £7,500pa-£12,000pa

Successful applicants will have at least a degree and will certainly have experience of UNIX or related software. They will be self-motivated, innovative, professional and capable of taking conceptual ideas and developing creative but robust software tools.

For the more senior positions applicants should have experience of software tools, product development, team leadership and possess the communications skills needed to liaise with clients, the marketing function and other computing professionals.

THE FUTURE

The expanding market and a growing company will provide excellent career prospects for those in at the start. Initial salaries and later progression will be dependent entirely on merit. The excellent benefits package includes generous holidays, contributory pension and health schemes and relocation assistance will be available if appropriate.

The company's prestigious headquarters are located in London's Covent Garden with its fascinating atmosphere of market, restaurants and street theatre close by the cinemas and theatres of the West End.

If you are ready to build on your existing experience in an exciting environment, telephone now or post the coupon and we will send you an Application Form and Company Profile.

COMPUVAC

"C" YOUR NEXT UNIX JOB HERE!

CITY MERCHANT BANK

TO £20,000 PLUS BANK BENEFITS

UNIX AND "C" EXPERIENCE

FROM ONE YEAR'S PROGRAMMING UP TO SENIOR SYSTEMS ANALYST, URGENTLY REQUIRED

My Client offers the opportunity to develop your DP skills in a new, progressive Division committed to the latest advances in modern technology.

This International Banking Organisation is on Phase One of a new project to develop a Security Trading System being implemented on large minis. Banking experience is useful but not essential, though you must be able to work under pressure and to time schedules in a team of 12. My Client offers career prospects as well as the usual banking benefits which include mortgage subsidy, free pension, interest-free season ticket loan, etc.

PLEASE CONTACT JILL HARVEY OR JIM CHRISTIE, CPS, COMPUVAC HOUSE, 121-125 CITY ROAD, LONDON, E.C.1 (next to Old Street Tube, exit 1), OR SEND CV TO COMPUVAC FREEPOST EC1B 1EN. TELEPHONE: 01-253 5042 (10 lines, 24 hours) OR 01-250 0456.

The above is one of many UNIX and "C" vacancies we have in London and the Home Counties, in both Commercial and Scientific/Technical environments. There are also hundreds of other positions available requiring skills in other languages and computers in our Commercial Mini/Micro and Scientific/Technical Divisions.

IBM

IBM SYSTEMS PROGRAMMERS

£12,000 TO £19,000 + BENEFITS

A large number of our major IBM clients are currently looking for experienced Systems Programmers. You will have a minimum of two years' experience either on OS/VS2 and VM Systems or MVS systems. Ideally using COBOL or ASSEMBLER languages and associated software including CICS, OLI. Any Communications/Networking experience would be extremely advantageous in some cases. Ref: 11/CW.

IBM COBOL PROGRAMMERS

TO £12,000

If you have at least one year's programming experience using IBM COBOL either on DOS or MVS systems and would like to move into a stimulating development environment, a number of companies based in Central London would like to hear from you. More senior Programmers will have at least one year's knowledge of CICS/OLI or associated on-line systems. Ref: 12/CW.

PL1 PROGRAMMERS

TO £11,500 + BENEFITS

A large financial organisation based to the North of London are looking to recruit experienced PL1 Programmers with at least two years' experience working on OS/VS1 or MVS systems. You should also be familiar with program design, coding, testing, etc., and be able to assist junior staff with problem solving and training. A generous benefits package is offered, including a mortgage subsidy and relocation expenses. Ref: 13/CW.

IBM ANALYST PROGRAMMERS

£11,000-£13,000

Experienced Analyst Programmers are urgently sought by three large IBM users in the Commercial Sector. Suitable applicants will have two years' + experience as an Analyst Programmer, at least one of which will have been in an Analyst environment. Essential requirements include IBM 4300 experience on MVS systems using COBOL. Exposure to CICS and OLI would be a distinct advantage. Ref: 14/CW.

CONSULTANT ANALYST PROGRAMMERS

£10,000-£14,000

Three of the largest Consultancies in and around Central London require experienced IBM Analyst Programmers who have worked on the mainframe side together with some exposure to minis. Large experience should include COBOL, BASIC and ASSEMBLER. Any experience of interfacing between mainframes and mini/micro equipment would be extremely useful. Ref: 15/CW.

OTHERS

HONEYWELL

TO £11,000

Vacancies in W. London, Bucks, Surrey, Kent, at all levels for Programmers with sound GCOS skills, particularly TOS and IOS. Perks include bonus scheme, cars, etc. Programmers with GCOS/NETWORKING Technical Skills are particularly sought. Ref: 01/CW.

ICL 2904 AND 2900

TO £12,000

Numerous vacancies at all levels for sound ICL Programming skills. Particular requirements are for VME/B skills coupled with IDMS and/or TP. Numerous opportunities in the 2904/ME29 area - again TP skills are valuable. Some requirements for SIO/S25 talents also. Environments cover manufacturing, commercial and finance/banking. Ref: 02/CW.

UNIVAC

TO £10,500 + PERKS

Analyst/Programmers with Database and/or On-line skills, minimum two years' experience in commercial or manufacturing environment. Also some opportunities for people with good 1100 experience to move into finance/insurance. Ref: 03/CW.

ME29, TPS

£8,000 TO £10,500

Three positions in a Financial/Insurance environment running dual ME29s. Ideally you will have TPS experience but training will be considered for experienced COBOL Programmers. Salaries are negotiable and excellent benefits package applies. Ref: 04/CW.

IMMEDIATE CONTRACTS!

Burroughs, all levels, med. Systems, COBOL, DMSII, GEMCOS, 6 months. B20, Analyst/Prog., COBOL/PASCAL, Commercial, 12 months+. PL1, MVS, Analyst Prog., Commercial, Vur-gent!!! Analyst, Total Database, ICL, VME/B, Commercial, 6 months+. Analyst Progs, COBOL, OS/VS2, Comm/Financial, 6 months.

IBM

IMS PROGRAMMERS AND ANALYSTS

TO £16,000 + BENEFITS

One of the leading Banking organisations is currently looking for IMS specialists to work in their development area on large financial systems. Candidates should have a proven track record using IMS OS/VS2 and best programming in COBOL and/or MIV languages. Previous banking experience in a related environment would be highly advantageous. Ref: 16/CW.

IBM BUSINESS ANALYSTS

£10,000-£15,000

A large Engineering Company based near Central London wishes to recruit Commercial Analysts with two-four years' experience gained on IBM MVS systems. You will have come from a programming background using COBOL and ASSEMBLER and probably CICS. The positions would necessitate exposure to FOCUS and, though this is not obligatory it would be a decided advantage. Ref: 17/CW.

IBM DATABASE ANALYSTS

TO £14,000

This financial organisation is looking for experienced Database Analysts and Co-ordinators with a sound Commercial background of at least five years. Your mainframe experience must include PL1, CICS and IMS and you will have had first-hand exposure to the physical design of a database, probably using DATAMANAGER or similar software. Ref: 18/CW.

IBM SYSTEMS DESIGNERS

£10,000-£13,000 + BENEFITS

Potential candidates must have five years' + experience in DP with at least two-thirds being involved in analysis and design. A programming background using PL1 on OS/VS1 or MVS systems is preferable due to the technical content of the job and on the analysis side you must have seen a major project from feasibility through to implementation. Ref: 19/CW.

GSD PROGRAMMERS & ANALYST PROGRAMMERS

£8,000-£13,000 + BENEFITS

There is currently a wide range of opportunities in all environments for GSD people. Programmers with System 34 and/or System 38 experience are urgently required in Consultancy and end-user locations to work on different developments which include manufacturing, financial and commercial systems. We also require Programmers and Analyst Programmers to work in major banking institutions. All positions are based in the London area. Ref: 110/CW.

Computer Manager

Salary - £15,033 p.a. to
£16,005 p.a.

We are looking for an experienced data processing professional with management experience to manage and lead the further development of computer services in a major local authority.

THE POSITION

The computer service is given from within the council's Finance Department and the successful candidate will be responsible directly to the Chief Financial Officer for all aspects of the computer operation and development. The section comprises a staff of 40 and computer applications are operating within all departments of the council.

THE COMPUTER

The council presently has a Honeywell Level 66/OPS44 computer with an expanding terminal network. The emphasis of present and future development work is on systems using database and TP techniques. It is the council's policy to encourage the use of microcomputers and to ensure their ability to link to mainframe.

Prospective applicants wishing further details can obtain them by writing to the Chief Financial Officer, PO Box 61, Cliffe Street, Halifax, West Yorkshire HX1 1TP, marked for the attention of the computer manager.

Details applications for the position should be sent to the above address by January 28, 1984.

(17194)

university college of swansea

Department of Electrical and Electronic Engineering

Applications are invited for a post as Lecturer in the Department of Electrical and Electronic Engineering. Applicants should have research interests in one of the main research areas of the Department: Microelectronics, Computer Engineering and Signal Processing, Communication, Control and Instrumentation. Preference will be given to applicants with research interests in Computer-Aided Design in one or more of these areas.

The appointment will commence on the nearest date that can be arranged, and will be on the scale £7,150-£14,125 per annum plus USS/USOP benefits.

Further particulars and application forms (2 copies) may be obtained from the Personnel Office, University College of Swansea, Singleton Park, Swansea SA2 8PP. To which office they should be returned by Friday, 17 February, 1984.

(17121)

SENIOR COMPUTER OPERATOR

required in Centre for Computing and Computer Science to work on a two shift basis involved in the operation of a Honeywell Multics OPS 8/70, DEC 2060 and associated networking equipment. Applicants should have three years' large mainframe experience and educated to O level standard. Salary scale £5,806-£8,796 o.e. plus shift allowance.

Application form from Assistant Secretary, Personnel Office, University of Birmingham, P.O. Box 363, Birmingham B15 2TT, Ref. 6806/206.

(17244)

EXETER CITY COUNCIL PROGRAMMER

Required in the Computer Section of the City Treasurer's Department to assist with the programming and development of specific systems.

Sound experience in computer programming (particularly BASIC) is regarded as essential, rather than experience in the public sector or with CMC machines.

Salary negotiable within the scale £7181-£8712.

Further details and an application form are available from the Personnel Officer, Civic Centre, Exeter Field, Exeter EX1 1JH. Tel: 0321 77888 Ext. 2151 to whom completed forms should be returned by the 23rd January 1984.

171

TEESSIDE POLYTECHNIC COMPUTER CENTRE

WE ARE "AN EQUAL OPPORTUNITIES EMPLOYER"

The Computer Centre provides a training service for the teaching, research and administrative work of this Polytechnic using 3 Interchange Prime 750 computers.

Applications are invited for a

PROGRAMMER ANALYST

to join the Information and User Support team providing user support, advice and writing technical documents.

The post is graded at Scale 4-6 and the salary, according to qualification and experience, will be on the following scale: £6,264-8,712 per annum.

Application forms and further particulars from the Personnel Section, Teesside Polytechnic, Borough Road, Middlesbrough, Cleveland TS1 3BA. Tel: 01642 218121, Ext. 4114.

Closing date for applications - January 31, 1984.

(171)

UNIVERSITY OF DUNDEE

PROGRAMMER/ ANALYST

Applications are invited for the post of Programmer/Analyst in the Data Processing Office of the Secretary's Department.

The Data Processing Office operates a Honeywell OPS/5A 760K system main memory, 240 mycra on-line storage operating under GCOS4 and is involved in maintaining and developing systems on a wide variety of topics relating to University Administration and Finance. Honeywell's IPS on-line software is used extensively.

Ideally candidates should have had working experience of GCOS4 and IPS and be able to program in Fortran, Algol and Basic.

Salary will be on the Administrative Staff Scale 18, £6,310-£8,875, depending on previous experience.

Further particulars are available from the Personnel Office, The University, Dundee DD1 4HN where applications, giving full career details and the names of three referees, should be sent as soon as possible. Please quote Ref. EST/18/3CW.

Applications close on January 31, 1984.

SMR Sales & Marketing Recruiters Ltd

Leaders in High Technology Recruitment

SALES EXECUTIVES or SALES MANAGERS ALMOST TOO GOOD TO BE TRUE?

That's what these 2 job opportunities appear to be at first sight! After all, how often is it that you come across the chance to join an undisputed leader in its chosen area of computing, with a totally original marketing concept and a completely unique product, yet a company that has been enjoying continuing success for the past 10 years?

This is a company where the salesmen are king. Indeed, all the company directors have distinguished records of success in territory sales. Mind you, you have to be good! No matter how accomplished you are you will have to learn some new selling techniques and conceptions, which will necessitate extensive and continual training.

Summing up the total attractions of these jobs is difficult, other than to say the company offers a fruitful environment for excellent people to fully exploit their potential and truly enjoy their work. Here are a few more considerations:

- Only one salesman has left this company in the last 10 years.
- There is constant exposure to the highest level of management in British industry.
- Every transaction is different.
- Their salesmen are involved in more deals in a month than a mini/mainframe salesman normally handles in a year.
- There is perpetual involvement in the most exciting aspect of selling.
- This product area automatically increases personal market value and business management skills.
- The company is dedicated to individual freedom of expression, flexibility of operation and excellence of performance.

The jobs are located in

LONDON & NORTHERN ENGLAND

and will be best suited to those sales people who feel comfortable handling sales transactions of around £1/2 million; successful negotiators with a truly competitive nature and real flair for creative thinking. It will be a particularly attractive opportunity for those in sales management who would prefer to be doing deals instead of 'prattling around' with staff!

Expected earnings, other than sickness insurance and health assurance, include profit-sharing and a high basic salary, with a total remuneration of

OVER £30,000 + GRANADA GHIA (or equivalent)

Please contact Alasdair Scott (London), or Roger Dodd (Lichfield), quoting reference WSA/123.

SALES BIT

Quality of Management - 78

Be positive when out with your salesmen

LAST week I ventured to suggest that the absence of a sales training budget or the lack of internal training facilities does not negate the sales manager's responsibility for providing sales training. I discussed the benefits of field sales training for salesmen and sales manager alike as well as mentioning some of the lame excuses that are often put forward for avoiding this demanding yet rewarding process.

This week, I would like to continue this discussion by proposing a few guidelines for those sales managers who are about to grasp the nettle of getting out into the street with the troops.

I hope I can also generate some reconsideration of present methodology on the part of those sales managers who do go out with their sales people, particularly those who in all intents and purposes only go along for the ride.

The first thing to remember is that the call belongs to the salesman, not you. There are bound to be occasions within almost every call when it is obvious that the salesman is doing the wrong thing. The possibilities are too numerous to mention!

The very worst thing you can do is jump in with both feet and put the salesman right. It makes him look foolish and inadequate and reduces his confidence as well as reducing the credibility of your company and product in the eyes of the potential buyer. Far better let him make the mistake and take

note of it so that you can discuss it after the call.

Of course there have to be exceptions, but where they occur they have to be handled properly. As I have already said, it's the salesman's call and therefore the position of the sales manager should be in the background, not the foreground, he should be an audience not an actor. It must also be remembered that no matter how good your relationship with the salesman might be, he will not be at his best whilst you are with him. He is being watched and he knows it.

He will have an exaggerated perception of his mistake which will tend to make him more nervous and over-reactive than he would ever be on his own. In other words, it is almost certain you are not seeing him at his best, and very likely he believes he is operating at his worst.

There is, however, a situation much worse than putting the salesman right in front of a client, and that is taking over the call completely because he is handling it badly. Unless you want to entirely destroy the salesman's belief in himself, don't do it!

On the other hand, what you must do is make it clear to the salesman right from the very outset that if he feels he is getting into trouble with any sales call he is free to bring you into the discussions or ask for your advice. The difference between involvement in the sales call as a result of the salesman's invitation as opposed to

actively getting involved yourself is the difference between constructive training and destructive interference. It doesn't take much to realise which is best for customer, salesman and manager alike.

One very important discipline for all sales people is to develop the habit of considering the objectives of every sales call before entering the client's premises and to review the outcome immediately after it is made, including the production of a call-report that covers all the key

features of the meeting. Consequently it is essential that this responsibility is emphasised within field sales training process by ensuring that before each sales call is made the salesman is asked, "Why are we making this call?" Hopefully you will be spared the obvious frantic responses and establish some sensible objective.

Whatever happens, you have to take whatever steps are necessary to overcome the common malaise of thinking it's Waterloo so it must be Wednesday.

Similarly, it is essential to spend some time discussing what happened within the call, above all, remembering to mention the good points as well as the bad, the strengths as well as the weaknesses. There is nothing more likely to completely destroy a salesman, who is more aware than anyone else that he has made a mess of things, than going through each blunder step-by-step and thrusting them down his throat.

Wherever possible, attempt to offset each mistake with a good point with the overall objective of emphasising more good than bad within each call that is analysed. Furthermore, don't simply pick up the errors and put them on display, you ought to be able to counter each criticism with positive advice on how it should be done. If you can't, but still think it is necessary to highlight the problem, then make it a point of discussion rather than making a bald statement of condemnation.

In fact, it's a question of treating the salesman like you would expect him to treat your customers, with respect, without confrontation, with fairness and above all in a constructive, considerate, encouraging and intelligent manner.
